<sup>1</sup> Subject to revision.<sup>2</sup> Not available.<sup>3</sup> Estimate by Department of Mines and Resources.<sup>4</sup> Assuming no change in fish from 1942.**Section 3.—The Grain Trade****Subsection 1.—Governmental Agencies Regulating or Co-operating with the Grain Trade**

The agencies exercising control of the grain trade in Canada are: the Board of Grain Commissioners, which administers the provisions of the Canada Grain Act, 1930; and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. An article on the Canadian Wheat Board and its operations down to February, 1939, was specially prepared for the 1939 Year Book by T. W. Grindley, Ph.D., Secretary of the Board, and appears at pp. 569-580 of that edition. An account of the organization and functions of the Board of Grain Commissioners, prepared by J. Rayner, Secretary of the Board, appears at pp. 481-482 of the 1941 Year Book.

**Subsection 2.—Distribution, Storage and Inspection of Principal Field Crops**

A feature of the disposition of Canadian wheat during the two years ended July 31, 1943, was the heavy utilization of this grain for animal feeding. A large surplus existed in the Prairie Provinces and because of the heavy demands on other feed supplies brought about by the substantial increase in the production of live stock and live-stock products, producers turned to wheat as a source of feed. The Dominion Government introduced a Freight Assistance Policy in October, 1941, which enabled farmers in the five eastern provinces and in British Columbia to secure western wheat and other grains for feeding purposes. The Federal Government absorbed the freight cost in moving such grains from Fort William-Port Arthur eastward and from points in western Canada to the Pacific Coast province. Export shipments were well maintained despite the fact that many pre-war markets were closed to Canadian wheat, so that the total disposition of supplies was relatively high. Details of the distribution during the past six crop years are given in Table 3.

<sup>1</sup> Fourth official estimate.

The domestic and export trade in Canada's five principal grain crops is shown in some detail in Table 4. It will be noted that in the case of oats and barley a relatively small proportion of the supply was exported in 1941-42, but exports of these two grains increased sharply in 1942-43 as the result of a heavy demand from the United States. The export movement of flaxseed also increased considerably, due to the surplus resulting from the large 1942 crop, and again the United States was the principal outlet.

<sup>1</sup> Includes dockage in flaxseed.

**Licensed Grain Elevator Capacity in Canada, May 31, 1943.**—In the early months of the War the total licensed capacity of grain elevators in Canada was approximately 423 million bushels, but on Dec. 1, 1940, the addition of almost 86 million bushels in the form of annexes had raised the storage capacity to 508.7 million bushels. The erection of new storage buildings continued in 1941 and included the building of a number of large annexes at Fort William-Port Arthur, with a combined capacity of nearly 53 million bushels. Some new storage was put up also in eastern Canada, and a summary of licensed elevators made at May 31, 1943, indicated that total storage in Canada had risen to 603 million bushels, an increase of 180 million bushels or approximately 43 p.c. in the storage capacity over 1939.

<sup>1</sup> Receipts only.

**Wheat Flour.**—Per capita consumption of wheat flour in Canada has been well maintained, while export shipments have increased sharply and include a substantial movement to Russia. In 1941 there were 285 flour and feed mills operating in Canada as compared with 279 in 1940; there were also 844 chopping mills. The capacity of the flour mills in barrels per day was 98,739 in 1941 and 96,868 in 1940. During the crop year 1942-43 the mills operated very close to the limits of their capacity to produce wheat flour. Statistics of employees, power installation, value of products, etc., for flour and feed mills for 1941 are given in Table 9 of the Manufactures chapter at pp. 374-375.

## Section 4.—Marketing of Live Stock and Live-Stock Products\*

Since the outbreak of war there has been a great increase in the demand for live stock and live-stock products in the form of meats, dairy products, poultry and eggs. These products have not only been required in greater volume to meet requirements of Britain and other United Nations, but also the demand in Canada has expanded sharply as a result of greater purchasing power in the hands of the consumers. Live stock thus makes a very important contribution to farmers' income and also provides the basis for a large slaughtering and meat-packing industry in Canada.

**Live-Stock Marketings, 1942.**—Total marketings of cattle in Canada in 1942 were 1,288,617 as compared with 1,344,794 in 1941. Marketings of calves totalled 771,690 as compared with 828,639. The declines in these two classes of live stock in 1942 as compared with 1941 were largely the result of the holding back of stock on the part of farmers for the building up of herds. Marketings of hogs through commercial channels in 1942 totalled 6,232,087 as compared with 6,225,274 in 1941. Marketings of sheep and lambs were 833,147 in 1942 as compared with 829,666 in 1941.

The interprovincial and export movement of live stock in 1942 showed very little change as compared with 1941. Total shipments in 1942 with comparative figures for 1941, in parentheses, were as follows: cattle 504,971 (512,313); calves 259,272 (264,846); swine 1,177,732 (1,243,985); and sheep 252,632 (236,401).

\* Revised in the Agricultural Branch, Dominion Bureau of Statistics. For more detailed information on this subject, see "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics; and the "Annual Market Review", published by the Live Stock Branch of the Dominion Department of Agriculture. Statistics of live stock and poultry are given at pp. 225-226 of this volume.

In Table 10 are given the statistics of the grading of animals marketed through stockyards and direct shipments to packing plants for the years 1938 to 1942. In recent years the practice developed of grading an increasing proportion of hogs by the carcass after they have been dressed at the packing plant until finally, at the end of September, 1940, live grading was discontinued. Consequently the figures in this table for hogs graded alive during that year are for nine months only.

**Slaughtering and Meat Packing.**—The growth of this industry has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating greater efficiency of operation and the utilization of by-products. There has been a large increase in the number of establishments since 1930, only 76 firms having reported in that year, whereas in 1931 the number was 147, owing to the inclusion of wholesale butchers operating small plants engaged in slaughtering only. The inclusion of these small establishments did not affect materially the value of production of the industry, which increased from \$3,799,552 in 1870 to \$7,132,831 in 1890 and to \$22,217,984 in 1900. In the next decade it more than doubled, attaining a value of \$48,527,076 in 1910, and by 1920 a value of \$240,544,618 was reported. In 1941 it was \$296,240,415 (the highest on record), as compared with \$228,500,487 in 1940. The principal statistics of the industry for 1941 appear in Chapter XIV, Table 9 at pp. 376-377. The slaughterings reported by establishments in the industry in 1941 were: cattle 1,052,574, calves 836,094, sheep and lambs 757,024; and hogs 6,469,323.

Establishments that prepare meat products for export are subject to inspection under the Meat and Canned Foods Act. In practice these include all the principal packing establishments but do not include local wholesale butchers included in the slaughtering and meat-packing industry above, nor slaughtering by retail butchers and by farmers for their own use and local sale.

**Consumption of Animal Products.**—The consumption of animal products such as meat, butter and eggs is generally more pronounced in the case of people with a high standard of living. In Canada there is a relatively high per capita consumption of beef, pork, butter and eggs but a relatively low per capita consumption of mutton and lamb, and cheese. During the depression years, the per capita consumption of these products was not affected as much as might have been expected. Changes in the per capita consumption of various animal products occur as a result of changes in price relationships. These, in turn, are related to cycles of over- and under-production particularly marked in the case of the meat products of hogs and cattle. Beef and pork interchange in leadership as regards the amount consumed, according to the price relationships between them.

### 12.—Production, Imports, Exports and Total and Per Capita Consumption of Meats and Lard in Canada, 1937-42

NOTE.—The figures in this table have been revised since the publication of the 1942 Year Book. Imports and exports of canned and processed meats have been converted to fresh weights. For estimates of population on which per capita figures are calculated, see p. 141.

**Export and Import Trade in Live Stock and Live-Stock Products.**—The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States and all countries, are shown for the calendar years 1941 and 1942, in Table 17 of the chapter on External Trade, at p. 478, and imports in Table 16 at p. 476.

## Section 5.—Cold Storage

**Cold-Storage Warehouses.**—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6; now consolidated as c. 25, R.S.C., 1927), subsidies have been granted by the Dominion Government to encourage the construction and equipment of cold-storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture.

### 13.—Cold-Storage Warehouses in Canada, by Provinces, 1942 and 1943

NOTE.—The figures in this table, which do not include creameries with mechanical refrigeration, were supplied by J. F. Singleton, Associate Director of Marketing Services, Dairy Products and Cold Storage, Dominion Department of Agriculture.

**Cold-Storage Stocks.**—Statistics of the stocks of food in cold-storage and wholesale warehouses and in dairy factories of Canada are collected and published monthly by the Agricultural Branch of the Dominion Bureau of Statistics. A summary of cold-storage reports is published annually giving final figures of the holdings, with some statistical measurements and charts. Foods reported are: (1) dairy and poultry products; (2) meat and lard; (3) fish; and (4) fruits and vegetables. The data in (2) are also included in the report on "Live Stock and Animal Products Statistics", published annually. A special report was published in 1940 giving the stocks on hand of the most important products at the first of each month from 1920 to 1939, inclusive.

# 14.—Stocks of Food of Canadian Origin on Hand in Cold-Storage Warehouses, in Other Warehouses and in Dairy Factories, 1942 and 1943

## Section 6.—Merchandising and Service Establishments\*

A comprehensive census of the business carried on by retail and wholesale trading establishments was undertaken for the first time in 1931 in connection with the Seventh Decennial Census. This census related to the business transacted in 1930 and covered the operations of service establishments including hotels in addition to retail and wholesale trading firms. The results for 1930 are contained in Volumes X and XI of the Census of 1931. A second census of trading establishments, similar in scope to that of 1930 was taken for 1941 as part of the Eighth Decennial Census. The final results for 1941 are now available in so far as the retail trade is concerned and these serve to show the changes that have taken place in the retail marketing structure of the country during the past decade. Preliminary figures on wholesale trading establishments have been compiled and summary figures by provinces are presented herewith. More detailed statistics on the wholesale trade will be given in the next edition of the Year Book.

### Subsection 1.—War-Time Controls Affecting Distribution and Trade

Controls over the distribution of consumer goods during the War became necessary as war needs cut into the available supplies, while, at the same time, civilian demand increased substantially. Various methods have been developed to ensure fair distribution—regulation of distribution at the trade level, consumer rationing, and restrictions on consumer credit, deliveries, and new business.

**Equitable Distribution.**—The equitable distribution policy of the Wartime Prices and Trade Board, formally laid down in October, 1942, requires that manufacturers and wholesalers, who are unable to meet the full requirements of their customers, are to allocate available stocks in proportion to sales to these customers in the year 1941. This assures to individual retailers and to all parts of the country a fair share of supplies, and provides a basis for fair distribution of supplies to consumers. Allotments may be revised following substantial increases in population or changes in the number of distributors serving a certain area. When shortages have become acute the policy of equitable distribution has been supplemented by specific allocations. For instance, in the case of canned vegetables, a plan was adopted in the fall of 1943 whereby sales by wholesalers to retailers and by retailers to the public were regulated to provide an even flow to the public during the winter and spring. Supplies to essential users, such as hospitals and lumber camps, were assured by means of quotas.

**Licensing.**—The policy of equitable distribution has been facilitated by the fact that, since November, 1942, the establishment of a new business or the distribution of a new line of merchandise is prohibited except in cases where a permit is obtained from the Board. This control prevents unnecessary dispersion of scarce goods and conserves materials and labour.

**Rationing.**—Rationing has been introduced for commodities in short supply which are essential to all or certain definable groups of consumers and when a ration system is necessary to ensure fair distribution. Two types of ration schemes have been used, coupon and permit. Coupon rationing is used for articles in general use which may be purchased regularly in approximately equal quantities by all users. Other articles, particularly durable goods, which are essential only to certain

\* Prepared by A. C. Steedman, B.A., Chief, Census of Merchandising and Service Establishments, Internal Trade Branch, Dominion Bureau of Statistics, with the exception of Subsection 1 on War-time Controls Affecting Distribution and Trade, which was prepared in collaboration with the Department of Munitions and Supply and the Economics Branch, Research Division of the Wartime Prices and Trade Board, Ottawa.

groups in the community and are purchased infrequently, have been rationed by permit.

Sugar, tea, coffee, butter, meat, evaporated milk (in certain areas), "preserves" and gasoline have been rationed by coupon. Electric stoves, residential lighting fixtures, new farm machinery, tires and tubes, typewriters and office machinery, standard railroad watches, protective rubber garments and small arms ammunition have been rationed by permit.

Under rationing it is necessary to control supplies through the various stages of distribution as well as sales to consumers. Retailers and wholesalers, therefore, may obtain supplies of rationed goods only by handing back coupons, permits, or equivalent ration documents to their suppliers. The actual handling of coupons has been very much reduced by the use of bank accounts for ration coupons, introduced in March, 1943. Ration banking applied only to foods until April, 1944, when it was extended to include gasoline coupons. When primary producers sell direct to consumers they are required to collect coupons.

Rationing of automobiles, trucks, gasoline and tires is under the jurisdiction of the Department of Munitions and Supply. All other consumer rationing is administered by the Rationing Administration of the Wartime Prices and Trade Board through its central, regional and local offices. Local ration boards, numbering about 600 in all and consisting largely of voluntary personnel, assist the Administration by dealing with consumer problems requiring knowledge of local conditions.

*Permit rationing* is based on the consumer's declaration of need. The conditions under which a person is entitled to purchase the commodity are defined and the prospective purchaser must show that he falls within the definition. In some cases, permits must be countersigned by the dealer and/or approved by local ration authorities. For example, during the period Aug. 10, 1942, to Mar. 17, 1943, anyone purchasing an electric stove had to certify either that an electric stove then in his possession was in an unrepairable condition or that there were no facilities in the building for the installation of a coal, wood or gas stove. In the rationing of farm machinery (introduced Oct. 6, 1942), details must be given regarding machinery already in possession of the applicant, the nature of his farming activities, etc., and the permit, countersigned by the dealer, must be approved by the local ration board.

The permit ration systems for small arms ammunition (Mar. 24, 1943), standard railway watches (Sept. 1, 1942) and protective rubber clothing (June 1-Oct. 25, 1943) have ensured that the limited supplies are reserved for certain occupational groups and, in the case of typewriters and office machinery (June 12, 1942) for priority users such as the Armed Forces and war industries. Permits also provide a record of sales by which replacement of dealers' stocks may be controlled.

Early in 1942 the production of automobiles was stopped (see Chap. XIV). To take care of the needs of physicians, nurses, fire-fighting and police departments, and other users in essential classifications, 4,480 new cars were set aside in a government "bank". Cars from this reserve pool are released only for essential purposes on a permit from the Motor Vehicle Control in the Department of Munitions and Supply. Manufacturers of trucks have been permitted to divert from military schedules certain models which are stripped of all military equipment and produced as commercial units. All new trucks for civilian purposes are released only when the prospective purchasers have proven their essentiality to the Motor Vehicle Control.

*Tires and Tubes.*—Within three days after Canada declared war on Japan, all civilian dealings in new tires and tubes had been prohibited, except by permit. In January, 1942, this freezing order was replaced by an order which permitted

essential users to purchase new tires and tubes on completion of an essentiality certificate. The weakness of this procedure soon became apparent, and it was superseded on May 15, 1942, by a rationing order.

Under the new order, a tire rationing representative was appointed for each of the Wartime Prices and Trade Board prices and supply offices throughout Canada. The function of the representative was to investigate all applications for new and retreaded tires, retreading services, and new or used tubes. Each such application had to be supported by a certificate from an authorized dealer to the effect that the turn-in tire was so worn that it could not perform its required service. Tire ration permits were issued only to those whose vehicles were included in a specified list of eligible vehicles.

At first, tire ration permits were required only for new tires, new tubes, retreaded tires, or retreading services. Used tires could be bought by anyone on the eligible list, merely by filling in a form in which the purchaser certified that the tire was essential in his work. However, used tires soon became scarce, and in July, 1943, dealings in such tires were placed on a permit basis.

Late in 1943, with the advent of fair supplies of buna-S rubber, it became possible to provide more camelback for retreading, and rationing of retreading services came to an end. Sales of new and used tires and tubes remain under permit.

*Coupon rationing* is designed to divide the available supplies among all users on an equal per capita basis. Consumers are provided with ration coupons which entitle them to purchase a specified amount of the rationed commodity, and the flow-back of these coupons, or their equivalent in other ration documents, controls the flow of the commodity through the regular channels of distribution. Special quota arrangements are made for large-scale users such as hotels, restaurants, hospitals, bakeries and other food manufacturers. In the case of sugar, tea, coffee and butter, amounts served to individual customers in restaurants have been limited.

A short résumé of the commodities rationed by coupon with the date rationing was introduced, the amount of the ration and other special features, is given below.

*Gasoline.*—At the height of the Battle of Britain and the Battle of the Atlantic, the necessity arose for gasoline conservation.

Gasoline stations were prohibited from selling petroleum products between 7 p.m. and 7 a.m. or at any time on Sunday. As a temporary measure, quota restrictions of deliveries of gasoline to service stations were undertaken in the summer of 1941. A coupon-rationing plan was introduced effective Apr. 1, 1942, and Regional Oil Control offices established to administer it. Each vehicle owner was required to register his vehicle with the Oil Controller and to obtain a gasoline licence and ration book. Each ration book permitted the purchaser a designated number of units of gasoline, according to the category of the vehicle for which it was issued. At the outset the unit represented the right to purchase 5 gallons of gasoline. After progressive reduction, the unit value stood throughout Canada at 3 gallons on Oct. 17, 1942, and has remained at that figure ever since.

The 1942 plan classified every vehicle within one of seven categories: "A", "B", "BX", "C", "D", "E" and "Commercial". Under each category with the exception of the "Commercial", three classes, grouped by makes of cars, were provided, and to each of these classes was assigned a different number of units. This distinction between types of passenger cars was abolished in 1943.

A new plan went into effect on Apr. 1, 1943, and with only minor changes this same system remains in effect during the rationing year 1944-45. This plan provides a basic allowance for every passenger car, plus an extra allowance, tailored to meet

the proved individual needs of car owners eligible for a special category. Each passenger car is allowed a basic category "AA" ration book.

Those eligible, who can prove their need of a special category are allowed extra coupons for their vocational needs. Two cars in the same category do not necessarily receive the same allowance. Some owners in a special category may be allowed only a portion of a special ration book, others may be granted two or more books or portions of books, according to their proven needs. Tourists from outside Canada are permitted 4 units per year for a car or one and one-third units for a motorcycle.

Motorcycles are provided with gasoline under one of two categories, "motorcycle" and "commercial motorcycle".

Commercial vehicles come within two classes: "transit" and "services". In the "transit" class are included ambulances, buses, taxis and drive-yourself cars, and these are granted only enough gasoline to drive the mileage authorized from time to time by the Transit Controller of the Department of Munitions and Supply. The "services" class covers all other commercial vehicles, and the Administrator of Services of the Wartime Prices and Trade Board classifies the vehicle in this group and advises upon the mileage gasoline allowance which should be granted to each type of vehicle. At the outset of a new rationing year the owner of each commercial vehicle is told how many units he will be allowed.

The ration plan also applies to watercraft. Commercial watercraft require a licence, but use the same marked gasoline that is sold for farm tractors and stationary engines and use no coupons. Non-commercial marine engines must be registered with the Oil Controller, and gasoline is purchased with coupons in the same manner as for motor-vehicles.

*Sugar.*—Sugar was first rationed in January, 1942, by an "honour" system which required consumers to limit their purchases to  $\frac{3}{4}$  lb. per person per week. This was reduced to  $\frac{1}{2}$  lb. per week in May, 1942, and coupon rationing was introduced a few weeks later (July 1, 1942). There has been no subsequent change in the size of the ration. Extra sugar has been made available for home-canning purposes in each year; the average amount made available in 1943 was approximately 11 lb. per person.

*Tea and Coffee.*—Rationing of tea and coffee by the "honour" system was introduced on May 19, 1942, consumers being required to use no more than half the amount of tea and three-quarters the amount of coffee they formerly used. Coupon rationing, which began Aug. 3, 1942, provided persons over 12 years of age with either 1 oz. of tea or 4 oz. of coffee per week. This ration was increased by one-third in September, 1943, and by a further 40 p.c. in May, 1940.

*Butter.*—Butter was rationed at the weekly rate of  $\frac{1}{2}$  lb. per person on Dec. 21, 1942. The ration was temporarily reduced to  $\frac{1}{3}$  lb. between January and March, 1943, and a temporary reduction again occurred in the spring of 1944.

*Meat.*—Meat rationing went into effect on May 27, 1943. The ration included all meats, except edible offal, meats with a bone content of over 50 p.c. and some fancy cooked meats, and provided an average of 2 lb. (bone included) of meat per person per week. The rationed meats were divided into four groups and the value of the meat ration coupons, of which two became valid each week, ranged from  $\frac{1}{2}$  lb. for boneless meats (e.g., bacon and cooked ham) to  $1\frac{1}{4}$  lb. for meat with a high bone content. Poultry was not included in the meat ration nor any fish except canned salmon which was included at  $\frac{1}{4}$  lb. per coupon on Jan. 17, 1944. Control of slaughter

by means of permits was established to ensure that supplies, except those consumed on the farm, moved through the regular trade channels against ration documents.

During February, 1944, the development of large surpluses of meat in Canada made advisable a temporary suspension of meat rationing at the end of that month. Announcement of the suspension in the House of Commons emphasized its temporary nature in view of the Government's determination to meet essential requirements of the United Kingdom. Reasons for the move were a continuance of heavy live-stock marketings and an acute congestion of storage space coupled with limitations on physical capacity to move meat to seaboard and overseas.

*Preserves.*—A group rationing scheme was adopted on Sept. 2, 1943, for a number of related products which are used either as desserts or sweeteners. The ration included jams, jellies, marmalade, molasses, honey, maple syrup and most maple products, corn and other table syrups, and canned fruits. Each coupon is good for a specified quantity of each article and the consumer may choose any one available. As in other ration schemes, wholesalers and retailers may purchase supplies only in exchange for valid ration documents. Because the ration includes a variety of articles, supplies of any particular one may fall short of demand and wholesalers have been required in such cases to conform to the policy of equitable distribution.

The values of the preserves coupon have been adjusted from time to time to keep them in line with the available supplies of the various articles included in the ration. Most of the coupon values were doubled on Feb. 3, 1944. The value of one preserves coupon—a two weeks' ration—is 1 qt. of molasses, or 2 lb. of honey, or 20 fluid oz. of canned fruit, or 12 fluid oz. of jam, etc. As an alternative, the preserves coupon is worth  $\frac{1}{2}$  lb. of sugar.

*Evaporated Milk.*—On Oct. 4, 1943, a priority distribution scheme was put into effect for evaporated milk to ensure that supplies would be made available for consumers in areas where fluid milk supplies were deficient, for infants and invalids requiring it in their diets, and for hospitals and other essential users. Infants and invalids and certain other persons, such as trappers, obtain coupons on proof of need. In areas of adequate fluid milk supply evaporated milk is sold only against these coupons. Extra quantities are allocated to areas where fluid milk supplies are deficient and these may be sold ration free after priority needs are met. Supplies are provided for hospitals and other essential users by means of quotas.

**Other Distribution Controls.**—*Priorities.*—Other controls over trade that have been of particular importance under war-time conditions have been the priorities system introduced in Canada and in countries from which Canada must draw supplies. The Priorities Officers of the Department of Munitions and Supply are responsible for the supervision of all matters having to do with priorities of production, transportation and delivery of materials and commodities of every kind in Canada and assist Canadian importers, including the distributive trades, in relation with priority authorities in other countries. The Priorities Officers working in conjunction with the various Controllers of the Wartime Industries Control Board and Administrators of the Wartime Prices and Trade Board direct the movement of many materials and products into essential channels.

*Coal.*—By granting delivery priorities wherever necessary to householders with less than a week's supply on hand, and by restricting sales of certain types of coal in areas of scarcity, the Coal Control has assured equitable distribution of available supplies. To accomplish this objective a number of restrictive measures have been necessary.

**Alcoholic Beverages.**—The Dominion Government restricted the production and importation of alcoholic beverages in December, 1942. Since that time various rationing programs have been put into effect for spirits, wine and beer by the provincial Liquor Control Boards.

**Consumer Credit.**—In October, 1941, the Wartime Prices and Trade Board imposed restrictions on consumer credit, as a method of curtailing demand for the diminishing supplies of consumer goods. The original restrictions were amended in December, 1941, January and August, 1942, and February, 1943. In general, minimum down payments and maximum time limits have been specified for instalment purchases of practically all goods sold at retail; charge accounts must be paid within one month of the end of the month in which the purchases are made, and personal loans for the purpose of buying articles on the instalment plan have been regulated. These restrictions have been followed by a shift from credit to cash transactions and a marked decrease in merchants' accounts receivable.

**Delivery Restrictions.**—Delivery and trucking restrictions have been introduced primarily to conserve trucks, gasoline and tires. Some apply generally while others have affected the retail and wholesale trades particularly. Special deliveries are prohibited and regular deliveries are limited in number; minimum load requirements have been established for ice and bread deliveries; operations of private commercial vehicles are limited to 35 miles from their registered address; and retailers are not permitted, except in special cases, to make delivery of an order under one dollar in value. In addition to savings of labour and equipment these restrictions have, to some extent, reduced costs of operation.

### Subsection 2.—Wholesale Merchandising

The scope of wholesale trading as covered in the Census of Merchandising Establishments includes, in addition to regular wholesale merchants acting as intermediaries between manufacturers and the retail trade, those trading establishments engaged in the sale of equipment or supplies to industrial or institutional users. Manufacturing plants are not included but sales offices or branches maintained by manufacturers in localities apart from their plant are included. The wholesale census also includes grain elevators, bulk tank stations of petroleum distributors, marketing co-operative associations and other assemblers of primary produce. It includes commission houses and various types of agents and brokers in addition to wholesale merchants who buy and sell on their own account.

#### 15.—Bulk Merchandising (Wholesale and Other Non-Retail), by Provinces, 1941

NOTE.—These are census data; for 1911 Census figures, see p. 534 of the 1942 Year Book.

## Subsection 3.—Retail Merchandising Establishments

## CENSUS STATISTICS

Final results of the Census of Merchandising for 1941 show that there were operating in Canada that year 137,343 retail stores whose annual sales totalled \$3,449,247,500, an increase of 25.2 p.c. in dollar volume compared with the \$2,755,569,900 sales reported by 125,003 stores in the earlier census for 1930. The scope and form of presentation of the Census of Merchandising Report for 1941 varied slightly from that for 1930, results for the earlier period including producer-distributors of dairy products, line elevators doing a small retail business and itinerant operators having no established place of business—types of enterprise not included in the regular retail tables for 1941. On excluding data for these types from the 1930 totals, an increase of 14.8 p.c. in number of stores and 25.8 p.c. in value of sales is recorded.

**Retail Merchandise Trade by Kinds of Business.**—For census purposes retail stores are divided into ten broad groups and each group is further subdivided into individual kind-of-business classifications, these classifications depending partly upon popular designation and partly upon the kind of commodities handled. These kind-of-business classifications should not be confused with commodity sales. Grocery stores carry items that cannot be classified as grocery products and, on the other hand, grocery products are sold by country general stores, department stores

and some other lines of trade in addition to grocery stores. The figures shown in Table 17 relate to stores classified broadly according to kind of business or trade. Sales through retail outlets on a commodity basis are shown in Table 22.

**Retail Merchandise Trade by Types of Operation.**—In addition to being classified according to kind of business each store was assigned to a type of operation classification, the basis of classification in this instance being whether the store was individually owned and operated or whether it belonged to some type of multiple organization. For census purposes chains are taken to mean all groups of four or more stores (except department stores) under the same ownership and management and carrying on the same kind of business. All department stores are considered as independents irrespective of the number of stores operated by any one company.

Comparative figures for 1930 and 1941 are given in Table 18 and show that the proportion of the total retail trade transacted by chains has increased but slightly from 18·3 p.c. in 1930 to 18·9 p.c. in 1941. In the case of food stores alone (including grocery and combination stores) the chain ratios were 30·4 p.c. for 1930 and 30·5 p.c. for 1941; chains transacted 18·6 p.c. of the total drug store business in both years. On the other hand, the chain store type of operation developed in the shoe retailing field, ratios of chain to total sales in this instance increasing from 21·1 p.c. in 1930 to 37·2 p.c. in 1941.

<sup>1</sup> Less than 0.05 p.c.      <sup>2</sup> Includes itinerant operators, line elevators carrying on a retail business and producer-distributors of dairy products. These types of business were not included in the regular tables of the 1941 Census.

**Retail Merchandise Trade in Urban Centres.**—The retail merchandise trade for 1930 and 1941 in urban centres of 10,000 population or over, according to the 1941 Census, is shown in Table 19. A notable feature of these figures is the wide variation in different cities in the relationship between population and retail sales, per capita sales standing highest for cities that act as distributing centres for populous areas and lowest for industrial satellite cities adjacent to larger centres. In this connection it should be noted that in the census mail-order sales are attributed in whole to the city in which the mail-order office or house is located rather than being spread over the territory from which that mail-order business is drawn. This procedure has the effect of inflating the figures for certain cities in so far as per capita business is concerned.

## 19.—Summary of Retail Merchandise Trade in Urban Centres of 10,000 Population or Over, 1930 and 1941

**Retail Merchandise Trade, by Size of Business.**—Retail stores vary between wide limits when classified on the basis of volume of annual sales. Of the 137,343 stores in operation in 1941 there were 43,293 or 31.5 p.c. of the total which had annual sales of less than \$5,000 each and these transacted only 2.9 p.c. of the total business. Approximately 38 p.c. of all the stores in 1930 were in the corresponding size class and in that year they accounted for 3.6 p.c. of the total business. At the other end of the scale there were 419 stores in 1941 each with annual sales of half a million dollars or more and these transacted 19.0 p.c. of the total trade. In 1930 there were 250 stores in this category and they accounted for 18.3 p.c. of the total business.

In Table 21 the retail stores are classified on the basis of the average number of paid employees used in the business during the year. It will be noted that over 40 p.c. of the total number of retail stores are operated without the aid of paid employees, the work being carried on entirely by the proprietor or by the proprietor with the assistance of family members not carried on payroll. There were only 135 stores employing as many as 100 employees each but these accounted for 12 p.c. of the total volume of retail sales.

**21.—Retail Merchandising Establishments Grouped According to Number of Employees, 1941**

**Retail Sales by Commodities.**—Not all stores were able to give an analysis of their annual sales on a commodity basis but a large number did furnish this information. From the commodity figures thus obtained percentage distributions of total sales by commodities were computed for each kind-of-business classification. These percentage distributions were then applied to the total sales of all stores in the corresponding classification in order to extend the commodity data to cover the entire field including both the reporting and non-reporting firms. While the commodity totals thus secured must be regarded as estimates, they are considered to contain a fair measure of accuracy especially when taken by the broad commodity groups shown in Table 22.

<sup>1</sup> Exclusive of the sale of beer and wine in hotels which amounted to \$78,695,700.

<sup>2</sup> In addition,

sales of motor-vehicles, accessories, gas, oil, etc., in service establishments amounted to \$1,361,900.

<sup>3</sup> Exclusive of retail sales made by manufacturing bakeries and dairies; also exclusive of retail sales of producer-distributors of dairy products.

## MONTHLY STATISTICS

Monthly indexes of retail sales covering twelve lines of retail business dealing chiefly in foods, clothing and household requirements are available covering the fourteen-year period commencing with January, 1929. These indexes are based upon reports secured monthly from all department stores, from most of the larger chain-store companies and from a considerable number of independent outlets. Approximately 6,600 unit stores are covered. While these reports include only a part of the total field, they embrace a sufficiently large number of stores to provide a fairly accurate indication of the current movements in retail sales for the kinds of business sampled. Two sets of index numbers are published; one is computed from the calendar month sales reported, whereas the second set is adjusted to allow both for differences in the numbers of business days in different months and also for the usual seasonal movements.

Consumer purchasing during 1943 showed a tendency to stabilize at a level about 3 p.c. above the dollar volume of retail sales obtained in 1942. This increase in sales corresponds closely with the movement in the Bureau's index of retail prices which on average was 2 p.c. higher than in 1942.

Retail sales by kinds of business in 1943 showed three distinct groupings: those kinds of stores recording increases in the dollar volume of turnover, but at a diminished rate of gain; those maintaining sales at the 1942 level; and those types of business that showed decreased dollar volume compared with the preceding year. Those in the first group included drug stores, women's clothing stores, boot and shoe stores, candy stores, and grocery and meat stores with percentage increases over 1942 ranging between 9 p.c. for drug stores and 5 p.c. for grocery and meat stores. The restaurant trade was the only kind of business to extend its percentage rate of gain over its records of previous years, the sales in 1943 for this type of establishment showing an increase of 21 p.c. over the 1942 level.

Department stores, men's clothing stores and variety stores maintained retail sales close to the dollar volume obtained by these stores in 1942, but radio and electrical stores, furniture stores and hardware stores recorded decreases in sales of 16 p.c., 8 p.c., and 5 p.c., respectively.

Regional deviations in retail sales from the general pattern in 1943 were also noticeable. Thus, while Ontario recorded an increase of only 1 p.c., Quebec and British Columbia each showed gains of 6 p.c., and retail sales in the Maritime Provinces and the Prairie Provinces each increased by 10 p.c. in the first nine months of 1943 over the corresponding period of 1942.

### 23.—Index Numbers of Retail Sales, by Months, 1929, 1930, 1933 and 1940-43

NOTE.—The general indexes are composite figures secured by weighting the indexes of sales for twelve kinds of business in proportion to their relative positions in the total trade.

### Subsection 4.—Retail Service Establishments

The Census of Merchandising and Service Establishments included in its scope not only firms engaged in the retail and wholesale merchandise trades but also a large number of different types of service establishments in which the annual revenue represented receipts from services performed rather than from the sale of merchandise. A considerable number of firms overlap these two functions, being engaged partially in selling goods and partially in providing services. Establishments were assigned in their entirety to either the merchandising or service section of the census on the basis of their major activity as measured in terms of annual receipts.

There were altogether 49,270 service establishments coming within the scope of the 1941 Census and these had total annual receipts of \$254,676,300. Included in these totals were 4,953 establishments classified to the amusement and recreation group with annual receipts of \$61,343,200. In the business services group there were 1,334 establishments with \$24,431,800 receipts. In the personal services group were 24,731 establishments with receipts of \$85,892,600. Included in this group were 8,306 barber shops with \$15,583,400 receipts, 604 combined barber shops and beauty parlours with \$2,136,100 receipts and 5,619 beauty parlours with \$12,844,400 receipts. The photography group included 1,078 establishments with \$6,901,300 receipts; in the undertaking group were 1,225 establishments with \$13,131,900 receipts while the repair group consisting chiefly of blacksmith shops and various types of automotive repair shops included 11,932 establishments with \$37,512,100 receipts. The residue was comprised of a miscellaneous group of 4,017 service establishments whose annual receipts totalled \$25,463,400.

**Motion-Picture Statistics.**—There were 1,251 motion-picture theatres in Canada in 1942 and these had a total of 183,735,258 admissions and box-office receipts (exclusive of amusement tax) of \$46,461,097, increases of 13 p.c. in number of admissions and 12 p.c. in amount of receipts over 1941 being recorded. Amusement taxes, including those levied by Dominion and Provincial Governments amounted to \$11,713,165 for 1942.

### Section 7.—Co-operation in Canada\*

NOTE.—An outline of the growth of co-operative activity in Canada and of legislation passed in connection therewith, is given at pp. 543-545 of the 1942 Year Book.

The United Nations Conference on Food and Agriculture held at Hot Springs, Virginia, May 16 to June 3, 1943, at which forty-five nations were represented, agreed unanimously that all countries study the possibility of the further establishment of producer and consumer co-operative societies.

\* Prepared by A. E. Richards, Ph.D., and Miss Lucienne M. Lalonde, Economics Division, Department of Agriculture, Ottawa.

The full text of Resolution XVII, Co-operative Movements, reads:—

WHEREAS:

1. The co-operative movement has been of very great importance in many countries, both to urban and rural populations, especially in agricultural districts where farming is based on small units and in urban areas of low-income families;
2. The proper functioning of co-operative societies may facilitate adjustments of agricultural production and distribution, as members have confidence in the recommendations and guidance of their own co-operative organizations, which they know operate in the interest of their members and of society in general;
3. The democratic control and educational programs, which are features of the co-operative movement, can play a vital part in the training of good democratic citizens, and assist in inducing a sound conception of economic matters.

The United Nations Conference on Food and Agriculture recommends:—

1. That, in order to make it possible for people to help themselves in lowering costs of production and costs of distribution and marketing:
  - (a) All countries study the possibilities of the further establishment of producer and consumer co-operative societies in order to render necessary production, marketing, purchasing, finance, and other services;
  - (b) Each nation examine its laws, regulations, and institutions to determine if legal or institutional obstacles to co-operative development exist, in order to make desirable adjustments;
  - (c) Full information as to the present development of co-operatives in different countries be made available through the permanent organization.

Fortunately Canada, when called upon, is in a position to provide the permanent organization of the Conference with fairly complete information on the development of co-operatives in this country. Every province in Canada has legislation providing for the organization and establishment of producer and consumer societies and has an office of the Government administering the legislation and giving guidance to new and existing co-operatives. The Economics Division of the Department of Agriculture has been entrusted with bringing together all available information on co-operative development in Canada and preparing an annual summary.

### Subsection 1.—Trends in the Field of Co-operation in 1942

**Co-operative Business Associations.**—According to reports received in the year 1942, a record in co-operative activity has been established in Canada. For the first time in the past eleven years, reported membership has exceeded 500,000 and total business has passed the \$250,000,000 mark. Reserves and surplus which reached a high point of \$46,000,000 and an improved working capital position indicate that expansion of co-operatives has been accompanied by a strengthening of their whole financial structure.

In order to increase effectiveness, sales agencies have been formed on a regional basis or on a Dominion-wide commodity basis, as the Canadian Co-operative Wool Growers, Limited, and the Canadian National Silver Fox Breeders' Association. Wholesale societies are operating in most of the provinces, consolidating the buying power of the local associations and augmenting the benefits to be obtained from quantity buying. The United Farmers of Ontario, Limited, and the Co-opérative Fédérée de Québec combine the functions of sales agency and wholesale buying agency for their affiliated local associations.

In Canada early expansion of co-operative activity took place most rapidly and to the greatest degree in the marketing of farm products. Presumably this field offered the greatest opportunity to the farmer to effect savings and to provide needed services. However, in recent years, with the establishment of co-operative wholesales in nearly every province, the purchasing of farm supplies and household needs on a co-operative plan has shown a marked increase.

In 1942, for the first time since the annual summary has been published (1932) the business of urban retail co-operative stores is included under sales of supplies. This accounts, in part, for the large increase in this item over 1941.

Due to the light grain crop in Western Canada in 1941 and restricted marketings, sales of grain by the grain co-operatives amounted to \$87,000,000 for the year ended July 31, 1942, in comparison with a total of \$139,000,000 for the previous year. The drop was more than offset by increases in the volume of marketings of dairy products, live stock, fruits and vegetables and poultry. Sales of this group of products increased from \$65,000,000 in 1941 to \$102,000,000 in 1942, or an increase of 57 p.c.

Some Canadian farmers market the entire output of their farms on the co-operative plan. A farmer may deliver his grain to a co-operative elevator, live stock to a live-stock shipping association and milk to a co-operative dairy. He may also purchase a large proportion of his farm supplies and household necessities from a co-operative store; for tractor fuel and gasoline he goes to his nearest co-operative oil station. This duplication must be kept in mind in interpreting the total co-operative membership figure of approximately 500,000 for Canada. A useful measure of co-operative activity on a regional basis is obtained by dividing the total amount of co-operative business for an area by the number of farms which it contains as reported in the latest census. On this basis for the crop year 1941-42 British Columbia led the provinces with average marketings per farm of \$491, Manitoba was second with \$462, Alberta third with \$331, and Saskatchewan fourth with \$322. The average per farm for Canada as a whole was \$293. During the past eleven years, farm products marketed co-operatively in Saskatchewan have averaged \$361 annually per occupied farm. British Columbia ranked second with \$310, Alberta was third with \$302, and Manitoba stood in fourth place with \$242 of co-operative business per farm. The annual average per farm for all of Canada during the eleven years 1931 to 1942 was \$217.

The grain growers are the most completely organized of the commodity co-operative marketing groups. Approximately 40 p.c. of the grain received at country elevators in Canada during the crop year 1941 was handled by co-operative agencies. Co-operative dairies and processing plants accounted for 25 p.c. of the total output of dairy products, and fruit and vegetable co-operatives handled approximately 26 p.c. of the total fruit and potatoes sold in Canada and exported for sale overseas. Co-operatives handling live stock and live-stock products accounted for approximately 25 p.c. of the total marketings. All marketing co-operatives handled approximately 32 p.c. of the main farm products entering commercial channels of trade.

Many associations formed primarily for marketing have found it possible to render an additional service to their members by utilizing the buying power already mobilized for the purpose of purchasing supplies needed on the farm. For example, fruit-marketing associations may buy fertilizer, spray material, barrels, boxes, flour and feed and general merchandise for their fruit-growing members. A number of associations have been organized for the purpose of buying supplies, usually bulk commodities, and some are operating stores carrying a full line of general merchandise.

Out of the 1,722 co-operative associations reporting in 1942, a total of 558 handled food products to the value of \$9,000,000 and 180 associations handled nearly \$1,500,000 of clothing and home furnishings for their members and patrons. These associations included the business of approximately 250 urban consumer societies. Petroleum products handled by 561 associations were valued at \$7,000,000. In order to increase crop and live-stock production, farmers of 834 associations purchased \$16,000,000 of feed, fertilizer and spray material on a co-operative basis.

The history of consumers' co-operation in Canada has not been encouraging, although some of the earliest efforts at co-operation in Canada were in the field of consumers' co-operation. The one society that has a continued record of successful operation is the British-Canadian Co-operative Society Limited at Sydney Mines, Nova Scotia. This society began business in 1906 with a single small store at Sydney Mines and now operates branch stores at North Sydney, Glace Bay, Florence and Cranberry. The society handles groceries, dry goods, meats, men's wear and also operates a bakery, a dairy and a tailoring department. For the past thirty-five years this society has been one of the most successful examples of consumers' co-operation in Canada and on the continent.

**Fishermen's Co-operatives.**—Co-operation among fishermen on Canada's Atlantic and Pacific Coasts is of recent origin. Information obtained from the Department of Fisheries records the establishment of a co-operative association among fishermen on the Atlantic coast in 1924. This association was organized at Tiginish in Prince Edward Island. No further organization was reported until 1930 when societies were formed in New Brunswick and Nova Scotia. From that year societies sprang up annually until in 1942 a total of 67 associations were reported as operating in that year. Total volume of business done by the 67 associations amounted to \$2,628,380. Estimated membership in all associations reporting is approximately 4,826.

Fishermen's co-operative associations in Canada are engaged in other activities than the marketing or processing of fish. On both coasts the fishermen pool their purchases of fishing gear and nets through their marketing associations. On the east coast particularly, many groups operate co-operative stores which supply the members with household necessities such as groceries, meats and dairy products.

**Credit Unions.**—The credit-union development has become an important part of the co-operative movement in Canada.

The first review of the extent and development of credit unions in Canada was made by the Economics Division, Marketing Service, Dominion Department of Agriculture in February, 1941. This was printed in *The Economic Annalist* for December, 1940, and February, 1941, and later issued as a reprint. The review gives a complete summary of the legislation governing these societies in each province as well as a statistical summary of the business done by them.

Credit unions may now be set up, under special legislation, in any province of Canada. Their first and foremost principle is that of thrift. Small savings, too small to deposit in any bank, are left with the group treasurer weekly. Twenty-five cents per week is the general amount saved, although many credit unions accept less. The secret, of course, is the regularity of the savings. With the funds so accumulated the credit needs of the members are taken care of by loans. The reason for such loans must be provident or productive.

Community credit unions loan money to pay bills, buy furniture or household equipment, and for medical and dental needs, hospitalization, births, funerals and other provident purposes. The interest rate on loans is usually 1 p.c. per month on the unpaid balance. This is much less than that charged by small loans companies or unlicensed lenders. The money received in interest is paid back to the members as dividends on their savings, and as a patronage rebate to the borrowers.

As shown in Table 30, there are over 1,400 credit unions in Canada, which provide the common man with the means of managing his own affairs, with his own money. At the close of 1942, Canadian credit unions had assets of \$13,971,925 and during their lifetime had loaned \$137,943,452.

There are, in every province except Manitoba, what are known as credit union leagues. These leagues are usually federations of smaller groups known as chapters which are organized in cities or areas where a number of credit unions are concentrated. It is expected that a league will be organized in Manitoba shortly.

Credit union leagues in Canada are performing valuable services on behalf of their member societies. Primarily, the leagues are educational bodies which publish and distribute pamphlets and information on correct credit union practices. They also pool orders for supplies of bookkeeping materials and arrange for the bonding of credit union treasurers. Most leagues make legal advice available to member societies, and maintain records and statistics on the progress of their own members and the status of credit unions in other provinces and countries.

The following is a citation of the principal legislation in each province: Prince Edward Island, the Credit Union Societies Act, c. 6, 1936; Nova Scotia, the Credit Union Societies Act, c. 11, 1932; New Brunswick, the Credit Union Societies Act, c. 53, 1936; Quebec, An Act respecting Co-operative Syndicates, c. 69, 1925; Ontario, the Credit Unions Act, c. 7, 1940; Manitoba, the Companies Act, c. 7, 1937, Part VIA, Credit Union Societies; Saskatchewan, the Credit Union Act, c. 25, 1937; Alberta, the Credit Union Act, c. 22, 1938; and British Columbia, Credit Unions Act, c. 12, 1938. No important amendments have been made during the past year.

Under the provincial legislation there is provision for an inspector whose duty it is to assist, advise and audit the accounts of the various societies. Each year each inspector prepares a detailed report on credit union activities in his province. These reports are usually printed and are available upon application.

**Insurance.**—Canadian farmers have used the group principle to insure their property against loss by fire for over seventy-five years. Some companies which began with a strictly rural clientele have now extended their coverage to include city property as well. The common feature of mutual fire insurance companies in Canada is the premium note which is given by the insured when his risk is underwritten. The insured may be required to pay a definite portion of this in cash in advance or he may be assessed from time to time to provide cash to pay off losses incurred and management expenses.

All companies may be incorporated under Dominion or provincial legislation and they thus come under the supervision of the various superintendents of insurance. These companies are purely mutual companies. They are controlled and directed by their farmer members for the benefit of the members. They constitute one of the oldest and probably the most successful co-operative undertakings established by Canadian farmers.

A recent tabulation showed that 365 farmers' mutual fire insurance companies carried at risk insurance amounting to well over \$1,000,000,000.

**Miscellaneous and Service-Type Co-operatives.**—Included under this heading are various services which are being provided in a co-operative manner such as housing, medical care, telephone systems and burial societies. Associations of this nature are more recent in development but are gaining in importance. Co-

operative principles have also been applied in isolated instances to many other forms of enterprise such as restaurants, laundries, printing and publishing and electrification. Until a complete survey of the field of consumers' co-operation is made, no accurate information is available.

Most widespread of all these various service-type co-operative associations are those providing telephone service. Organized in rural areas for the most part, records for the year 1913 indicate the existence of 262 co-operative telephone systems. By 1940 the number had increased to 2,348 and the number of connected telephones amounted to 102,286. The total investment in these systems was approximately \$20,000,000.

In view of the increasing demand on the part of the public and the hospitals for some means of lessening the financial burden of sickness, several plans have been developed in connection with public hospitals throughout Canada. In 1941 Canada had some 38 plans of hospital group insurance and many others in the process of development. Most plans now in operation have the same basic idea. There is usually a monthly fee on a family or individual basis in return for which the subscriber is entitled to preferential rates on various hospital services and many routine services at no extra cost. The Institutional Statistics Branch of the Dominion Bureau of Statistics reports five such plans in Nova Scotia, two in New Brunswick, seven in Ontario, one in Manitoba, three in Saskatchewan, seven in Alberta and thirteen in British Columbia. In the Province of Quebec one plan is ready to operate.

The first province-wide plan developed in Canada was launched by the Provincial Government of Manitoba and is at present the largest in the Dominion although its operations are confined to the larger cities. Upon payment of certain monthly fees subscribers are entitled to 21 days of hospital care which includes food and special diets, general nursing care, dressings, drugs and medicines. Discounts are allowed on laboratory analyses, X-rays and other treatments.

A plan in Ontario sponsored by the Ontario Hospital Association in co-operation with the Ontario Medical Association is quite similar to the Manitoba plan. The two public hospitals at Kingston, Ontario, have adopted a joint hospital plan which is a departure from the usual insurance-type plan. A *pro-rata* distribution of the full amount of the fund derived from the prescribed fees is made among subscribers who were hospitalized during the year on a basis of their receipted accounts.

Perhaps the best known co-operative housing project in Canada is in Nova Scotia. With the assistance of the Provincial Housing Commission miners in the vicinity of Glace Bay and Reserve Mines undertook the building of better homes for themselves and there are now three groups living in new houses in that area. They are organized on a community basis with funds lent by the Housing Commission and labour supplied by the members of the co-operative housing association.

There are one or two bus and transportation companies operated co-operatively in Canada. The students at the University of Toronto, Queen's University and the University of British Columbia operate co-operative residences. One co-operative burial society is known to be in the process of organization in Saskatchewan and at least one is operating in the Province of Quebec.

## PART II.—GOVERNMENT AIDS TO AND CONTROL OF TRADE

NOTE.—The Government aids to and control of trade dealt with in this Part of the chapter are in the main permanent legislative measures. An outline of the controls that have been instituted since the outbreak of war and that have been found necessary because of war-time conditions is given in Section 6 of Part I, at pp. 521-525.

### Section 1.—Combinations in Restraint of Trade\*

Dominion legislative measures for aiding and regulating trade provide specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements that tend to eliminate competition in price, supply or quality of goods, and thereby to unduly raise costs or prices, are prohibited under the Combines Investigation Act and under Sect. 498 of the Criminal Code.

A general article on Canadian legislation concerning combinations and monopolies in restraint of trade appears in the 1927-28 Year Book under the heading "Legislation Respecting Combinations in Restraint of Trade", pp. 765-770. In each later issue of the Year Book an annual statement on proceedings under the Combines Investigation Act is included.

**The Combines Investigation Act.**—The Combines Investigation Act (R.S.C. 1927, c. 26, as amended in 1935 and 1937) provides for investigation of trade combinations, mergers, trusts and monopolies alleged to have been formed or operated in restraint of trade and to the detriment of the public. Participation in the formation or operations of such combines is an indictable offence. Methods of unlawfully lessening competition and controlling trade include arrangements among competitors or others to enhance prices, to fix common selling prices, or resale prices, to exclude competitors from business or otherwise to unduly limit production or facilities for

\* Revised by F. A. McGregor, Commissioner, Combines Investigation Act, Department of Labour.

manufacturing or distribution. Business combinations and associations for most other purposes are not contrary to public policy, including associations to assemble and supply information on trade operations or to effect useful standardization or simplification of products or services.

Court proceedings following investigations under this Statute, completed since the commencement of the War, have included prosecutions of alleged combines of manufacturers and wholesalers of tobacco products, and manufacturers of corrugated and solid fibreboard shipping containers and materials for the manufacture of such containers. In the shipping container cases a total of 21 companies and one individual were sentenced at Toronto to pay fines amounting in all to \$176,000. All 22 accused were found guilty of offences relating to undue lessening or prevention of competition in the manufacture and sale of corrugated and solid fibreboard boxes or shipping containers, or of liner board and other materials used in the manufacture of shipping containers. Appeals against a number of these convictions were dismissed by the Supreme Court of Canada in 1942.

Thirty-six companies and individuals engaged in the tobacco business, including wholesalers and 7 manufacturers, were convicted by a jury at Edmonton in 1941, of offences of participation in a combination to fix and enhance prices of tobacco products and in operations of a merger, trust or monopoly allegedly controlling tobacco distribution through Canada to the detriment of the public. Fines imposed by the Alberta Supreme Court totalled \$221,500 and ranged in individual amounts from \$250 to \$25,000. Appeals against conviction by 35 of these accused were allowed by four members of the Alberta Court of Appeals in 1942 on the ground that certain of the accused had been previously charged under Sect. 498 of the Criminal Code and on other grounds of procedure at the trial. Reductions of some 10 p.c. in prices of a number of leading brands of tobacco products, exclusive of tax changes, have been effective since institution of these proceedings.

Fields of industry and trade to which the Combines Investigation Act is applicable have been placed during the War under direct price and supply controls of the Wartime Prices and Trade Board, the Department of Munitions and Supply and other Government war-time agencies. Accordingly, matters which in time of peace would have been subjects for investigation under the Combines Investigation Act have been commonly referred to and dealt with by the various appropriate war-time authorities.

## Section 2.—Patents, Copyrights and Trade Marks\*

**Patents.**—Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies (1624) and earlier, are a statutory grant in Canada and have always been so. An Act was passed in Lower Canada in 1824 wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the Province. Upper Canada passed its Act in 1826, and Nova Scotia and New Brunswick passed theirs at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding legislation.

\* The material relating to patents and copyrights has been revised by J. T. Mitchell, Commissioner of Patents, and that relating to trade marks by D. D. Ryan, Registrar of Trade Marks.

Letters patent are now issued subject to the provisions of c. 150, R.S.C., 1927, as consolidated in c. 32, 1935, and application for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa, Canada.

The Patents, Designs, Copyright and Trade Mark (Emergency) Order, 1939, was passed to deal with conditions arising out of the present war. The Order confers on the Commissioner of Patents power to extend the time for doing anything prescribed by the Patent Act, the Design Act and the Copyright Act; to grant licences to manufacture under enemy-owned patents, designs and copyrights; to vary existing agreements; to hold secret or to withhold from publication any disclosure that might be of service to the enemy; and to grant permission to file patent applications abroad. The main object of the licensing provisions under the Order is to permit and encourage the working in Canada of inventions protected by enemy-owned patents, which for that reason could not be utilized during the War.

The growth of Canadian inventions\* is shown by the fact that the number of applications and total fees increased each year without a break from the beginning of the present century until the fiscal year 1913, when 8,681 applications were received and the total fees amounted to \$218,125. Since then progress has not been so rapid. Of the 7,686 patents granted in 1943, 6,003 or 78 p.c., were from inventors resident in the United States, 500 from Canadian residents and 641 from residents of Great Britain and Ireland, while residents of Germany applied for 188, of Switzerland for 82, of Holland for 71, of France for 45 and of Sweden for 39.

#### 1.—Patents Applied for, Granted, etc., in Canada, Fiscal Years 1938-43

During the fiscal year 1942-43, there was notable activity in the chemical and allied arts, particularly in the development of new and improved synthetic rubbers, higher quality motor fuels, polyvinyltype resins as substitutes for rubber and plastic compositions. Production of new insecticides was very active both for field and home use. In the therapeutic field, many compounds and derivatives of chlorophyll were developed for use in the medical world. New sulphur drugs were created and developments made in the B vitamin group. Interesting and extensive development took place in the processing, preservation and concentration of animal and vegetable products. In metallurgy, new methods of extraction of magnesium from its ores, powder metallurgy, and many new alloys were the principal line of invention. Electric welding continued very active, particularly in the field of welding by means of stored energy, and new types of vapour electric rectifiers were developed. In

\* ‘Invention’ means any new and useful art, process, machine, manufacture, or composition of matter or any new and useful improvement in any art, process, machine, manufacture, or composition of matter.

radio, the outstanding features were mainly in oscillation generating and translating apparatus. Steady progress was made in automatic telephone systems to replace the human element in such functions as switching and long-distance toll call registering and billing. There was also considerable development in television and electron microscopes. War machines and devices maintained the activity of last year. Along with other classes of invention, those in explosives, firearms, aeroplanes, tanks and apparatus for the production of such war materials as machine tools, gauges and testing devices greatly increased in number.

**Copyrights, Industrial Designs and Timber Marks.**—Registration of copyright is governed by c. 32, R.S.C., 1927, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in c. 32, R.S.C., 1927) sets out, in Sect. 4, the qualifications for a copyright and, in Sect. 5, its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

Protection of industrial designs and of timber marks is afforded under the Design Act (c. 71, R.S.C., 1927) and amendments, and the Timber Marking Act (c. 198, R.S.C., 1927) and amendments. Registers of such designs and marks are kept under the Copyright Branch of the Patent Office, and information regarding them is published in the *Patent Office Record*.

## 2.—Copyrights, Industrial Designs and Timber Marks Registered in Canada, Fiscal Years 1938-43

Item	1938	1939	1940	1941	1942	1943

<sup>1</sup> Including assignments of and fees for trade marks that cannot be separated.

**Trade Marks and Shop Cards.**—Since Apr. 1, 1938, the Trade Marks Office has been functioning as a branch under the Department of the Secretary of State and therefore as an entity separate from the Patent Office with which it had been associated previously.

The Trade Marks Office is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and also with the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and/or shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa, Canada.

A Register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted, and notification of any assignments, transmissions, disclaimers and judgments relating to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of marks registered appears in the *Patent Office Record* which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that formerly were able to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

### 3.—Trade Marks and Shop Cards Registered in Canada, Fiscal Years 1938-43

NOTE.—Prior to Apr. 1, 1938, trade marks were dealt with in the Copyright Branch of the Patent Office.

## Section 3.—Weights and Measures\*

The object of weights and measures administration is to maintain uniformity and accuracy in the use of legal standards of the country in industry and commerce. An outline of the principal legislation and legal standards is given at p. 527 of the 1941 Year Book.

Since 1918 the Weights and Measures Service has been administered by the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 19 districts, each in charge of a district inspector. The chief rules of administration are given at p. 527 of the 1941 Year Book.

The total revenue collected by the Service in the fiscal years 1942 and 1943 amounted to \$420,000 and \$405,790, respectively, while the expenses, including salaries, amounted to \$424,935 and \$409,359, respectively.

\* Revised by E. O. Way, Director of Weights and Measures, Department of Trade and Commerce.

## Section 4.—Electricity and Gas Inspection\*

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927) and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The Gas Inspection Service was inaugurated on July 1, 1875, and the Electricity Inspection Service in 1894, at which time these two Services were merged to form the Electricity and Gas Inspection Services and constituted as a Branch of the Department of Inland Revenue. When the Department of Inland Revenue was merged with other Departments in September, 1918, the Electricity and Gas Inspection Services became a Branch of the Department of Trade and Commerce.

For the purpose of this administration, Canada is divided into 3 divisions and 20 districts: the total staff is 106. The nature of the work performed by these Services is entirely technical and comprises the control of all types of electricity meters and gas meters used throughout Canada, and the testing and stamping of every meter used for billing purposes, the object being to ensure the correct measurement of electricity and gas sold. Manufactured gas is also tested to determine its heating value wherever sold in Canada.

The latest report of the Branch shows 502,014 electricity and gas meters tested in the fiscal year 1943, as compared with 562,208 in the preceding year. The total revenue derived from electricity and gas inspection was \$339,463 as compared with an expenditure of \$270,928. The Branch also collected \$619,653 as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act; the cost of collecting this revenue was only \$657.

The administration of the Electricity and Fluid Exportation Act involves the receiving and consideration of applications to export electric energy, natural gas, crude oil, etc., the issuing of licences therefor, the inspection and testing of meters to measure the commodity exported and the collection of the export tax imposed. Other related statistics collected in the administration of the last-named Act will be found in the Power Chapter of this volume, pp. 344-345.

\* Revised by J. L. Stiver, Director, Electricity and Gas Inspection Service, Department of Trade and Commerce.

**Section 5.—Bounties**

In cases where it is considered advisable to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree but the only bounties that involved payments in the past few years were those on copper bars and rods, hemp and bituminous coal mined in Canada and used in the manufacture of iron or steel. The total amounts paid in bounties on the various commodities between 1896 and the date of expiration and on bituminous coal from 1931 to 1941 are given at pp. 562 and 563 of the 1942 Year Book.

Since the outbreak of war, and especially in recent months, war-time bonuses have been introduced which also encourage the production of particular commodities and therefore have an effect similar to that of bounties. These war-time bonuses are dealt with in the various sections of the Year Book where they have a direct relationship to production, particularly in the Manufactures Chapter.

### Section 6.—Control and Sale of Alcoholic Beverages\*

A brief historical outline of Dominion and provincial legislation passed from time to time concerning the control and sale of alcoholic beverages is given at p. 563 of the 1942 Year Book.

The provincial Liquor Control Acts have been framed to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of malt liquor by brewers, which certain provinces permit while reserving regulative rights and taxing such sales heavily. In all the provinces, however, spirits may be bought only at government liquor stores. The provincial monopoly extends only to the retail sale of alcoholic beverages, the manufacture being still in private hands but under the supervision of the Liquor Boards or Commissions. The original Liquor Control Acts have been modified from time to time as deemed advisable. For restrictions and controls that have been applied to the production of alcohol during war-time, see p. 526.

**Net Revenue from Liquor Control.**—In connection with the figures of net revenue shown in Table 8, it is essential to note that they include not only the net profits made by Liquor Control Boards or Commissions, but also additional amounts of revenue received for permits, licences, etc., which are often paid direct to Provincial Governments. In former editions of the Year Book this table is given in greater detail, but necessary explanation (attempted in footnotes) rendered interpretation very complicated.

\* Abridged from the report "The Control and Sale of Liquor in Canada", by Miss L. J. Beehler, M.A., published by the Dominion Bureau of Statistics.

<sup>1</sup> Not available at time of going to press.

**Apparent Consumption of Liquor in Canada.**—It is not possible to obtain accurate figures on Canadian consumption of liquor. Certain Liquor Boards do not publish figures to show sales on a gallonage basis, and even were such data available for all provinces they would not necessarily represent total consumption. For example, the quantities consumed by tourists reach a considerable amount. Further, there is no definite information regarding the illegal traffic in liquor, though inquiry has revealed that such illicit business has, at times, reached fairly large proportions.

Obviously, figures of consumption are subject to error for the reasons mentioned above, and also because no consideration has been given to increases or decreases in the quantities held in stock by the Boards or by licensees.

*Spirits.*—Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown as "entered for consumption" are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada. However, part of these may be exported.

*Malt Liquors.*—Only a small part of the output of malt liquors is placed in warehouses. The available supply is, therefore, made up of (1) production; (2) changes in warehouse stock; and (3) imports.

*Wines.*—The apparent consumption of native wines is obtained by dividing the rates of excise tax into the total tax collections. This is believed to furnish a better measure of consumption than the method formerly used (i.e., subtracting exports from production) since part of the product is not consumed in the year of production but is placed in storage for maturing.

<sup>1</sup> Estimated from excise tax collections; see text on p. 552.  
the details for 1943 cannot be shown at the present time.<sup>2</sup> Owing to war-time restrictions,**PART III.—COMMERCIAL FAILURES**

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was actually passed by the Dominion Parliament in 1869, applying to the four original provinces. This Act was renewed by c. 46 of the Statutes of 1874. In 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by two commercial agencies, R. G. Dun & Co., and the Bradstreet Co. Statistics of commercial failures dealt with under the Dominion Bankruptcy Act of 1919 have been compiled and published by the Dominion Bureau of Statistics since 1920. (See pp. 557-559.)

The three Sections of this Part, although closely related so far as subject matter is concerned, cover different aspects of the field and the statistics presented in each Section are not comparable.

Statistics of industrial and commercial failures in Canada, given in Section 1, are compiled by Dun and Bradstreet, Inc. This concern is a mercantile agency interested primarily in credit information, and it is not to be expected that their data would be compiled on the same basis as figures of the Dominion Bureau of Statistics or the Superintendent of Bankruptcy. Their statistics are established on a broader basis than those of Section 2, inasmuch as they include, as well as bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand, they do not include assignments of farmers (under the Farmers' Creditors Arrangement Act) or of wage-earners, so that, as a general rule, their totals run lower than those in Section 2. As pointed out, between 1875 and 1919 the agencies, now Dun and Bradstreet, Inc., were the only source of figures of commercial failures, and their statistics have an added value because they present an unbroken historical series, though not on a comparable basis since 1934 (see text preceding Table 1). Dun and Bradstreet, Inc., have ceased to publish statistics of assets since 1940.

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under Dominion legislation, such as the Bankruptcy Act (including the Farmers' Creditors Arrangement Act), the Winding Up Act and the Companies' Creditors Arrangement Act, but not failures, sales, or seizures carried out apart from such Dominion legislation. In the field covered, however, Section 2 is broader than Section 1, inasmuch as the Dominion Bureau of Statistics figures include failures of individuals such as wage-earners and farmers.

A word should be added as regards the value to be placed upon figures of assets and liabilities. Such values are estimates made by the debtor and, unfortunately, are not uniformly made. The human equation enters into them to a considerable degree and they must be accepted with this qualification.

Section 3 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy, under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can be assumed that this applies in even greater degree to the extended fields covered in Sections 1 and 2.

## Section 1.—Industrial and Commercial Failures from Private Sources

A historical table giving failures for Canada and Newfoundland, by classes, for the years 1915 to 1935 is given at p. 969 of the 1936 Year Book. Early in 1936, however, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding and other financial companies and agents of various kinds were dropped. These

changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The present figures of Table 1 are not comparable with those given at p. 969 of the 1936 Year Book, because of the above reasons and because the earlier statistics cover Canada and Newfoundland whereas these are for Canada only.

<sup>1</sup> None reported.

In 1943 Quebec and Ontario accounted for 54 p.c. and 23 p.c., respectively, of the total failures in the Dominion. As regards liabilities, Ontario accounted for 48 p.c. of the total as compared with 32 p.c. registered for Quebec.

## 2.—Industrial and Commercial Failures in Canada, by Provinces, 1941-43

(From Dun and Bradstreet, Incorporated)

NOTE.—Comparable figures for 1934-40 are given in the corresponding table of previous Year Books.

**Failures, by Divisions of Industry.**—The great majority of the commercial failures are found among trading establishments, which are so much more numerous than manufacturing establishments. Thus, according to the records of Dun and Bradstreet, Incorporated, out of a total of 186 commercial failures in Canada in 1943, 96 were among the retail trading establishments, including 32 in foods and 16 in restaurants.

## Section 2.—Commercial Failures from Administrations under Dominion Legislation

Under the Bankruptcy and Winding Up Acts (R.S.C. 1927, cc. 11 and 213) certain documents relating to estates administered under these Acts have, since July, 1920, been forwarded to the Dominion Statistician for statistical analysis. However, changes in the Acts effective in 1923 affected the comparability with 1921 and 1922, the two earliest full years for which statistics are compiled. The series, therefore, begin with 1923, except for the analysis by branches of business, in which case 1924 is the first year compiled. The statistics of this Section cover all bankruptcies and insolvencies that fall under Dominion legislation including assignments of individuals and farmers.

### 4.—Commercial Failures in Canada, by Provinces, 1933-43

NOTE.—Figures for 1923-32 will be found at p. 570 of the 1942 Year Book.

1937.....	10,704,079	14,303,362	1943.....	2,720,158	4,486,247
1938.....	8,782,191	14,017,061			

Table 7 of this Section has shown commercial failures in Canada by provinces and branches of business for the latest year. Since there was no 1943 edition of the Year Book published, subdivisions of the 1942 figures are not shown owing to pressure of space. The following table gives the data for 1943 and the reader is referred to the separate report on Commercial Failures for 1942 published by the Dominion Bureau of Statistics, where corresponding information for that year is given. It is felt that the main interest of readers in this connection is in the latest data and not in year-by-year comparisons.

**Section 3.—Administration of Bankrupt Estates**

The administration of bankrupt estates is now supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving so far as possible the assets of bankrupt estates for the benefit of the creditors. Figures from the first report are given at p. 1039 of the 1934-35 Year Book, and those for subsequent years are to be found in later editions.

# 8.—Assets, Liabilities, Assets Realized and Costs of Administration in Bankrupt Estates Closed, 1933-43, and by Provinces, 1942 and 1943

(From the Annual Report of the Superintendent of Bankruptcy)

<sup>1</sup> Exclusive of the city shown separately.

<sup>2</sup> In addition to the payments by the trustee, secured creditors valued their security or realized on it themselves without the intervention of the trustee to an amount of approximately \$2,596,068 in 1942 and \$1,799,722.

The Farmers' Creditors Arrangement Act came into effect Sept. 1, 1934. Assignments are made only in those cases in which the farmers are hopelessly insolvent and in many cases the assignments follow the rejection of proposals submitted to the creditors. Receiving orders are made only in cases in which the farmers have failed to fulfil the terms of their proposals as accepted by the creditors and approved by the court. Table 9 shows only statistics of estates closed by assignments or receiving orders and does not indicate the proposals that have been approved and are being carried out under the Farmers' Creditors Arrangement Act.

**9.—Assets, Liabilities, Assets Realized and Costs of Administration in Estates Closed by Assignments or Receiving Orders Under the Farmers' Creditors Arrangement Act, 1935-43, and by Provinces, 1942 and 1943.**

<sup>1</sup> In addition, land and chattels under mortgage or lien, of an estimated value of \$41,258 in 1942 and \$18,853 in 1943, were transferred to secured creditors.

<sup>2</sup> Does not include three estates in Saskatchewan and one in Alberta closed during the year but which would, if extended, alter the figures and affect the totals in such a way as to result in an unbalanced picture contrary to the actual state of affairs. These four cases had been held open or re-opened with a view to realizing on judgments obtained pursuant to conditional orders of discharge granted to the farmers but in none was anything recovered from this source and the only additional expense involved was an item of \$1 paid by the Dominion Government.

Subsection 1. Shipping.	621		
Subsection 2. Canal Traffic.	623		
Subsection 3. Harbour Traffic.	627		

Canada, nearly 4,000 miles in length from east to west, with the main topographic barriers running in a north-south direction, and a relatively small population of 11,506,655 thinly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation. Different parts of the country are shut off from each other by areas of rough, rocky forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of Lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from

the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with a population so distributed and producing mainly for export, as do western agriculturists or, like manufacturers, largely for consumption in distant portions of the country itself, cheap transportation is a necessity of life.

In order to appraise the value of each of the agencies of transportation, this chapter of the Year Book, after treating of Government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water and air, in Parts II, III, IV and V, respectively. In each Part the arrangement is intended to show: (1) the plant, equipment and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each agency. Unfortunately, this arrangement brings out some rather serious gaps in the information at present available; these are pointed out in the respective Parts.

Scarcely less important, from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great though little recognized factor in promoting solidarity among the people of different parts of the Dominion, and this same desirable object is now being further aided by radio, while telegraphs and telephones have done much to annihilate distance—the rural telephone, in particular, having been of great social and economic benefit in country districts. The press, assisted by cheap telegraph and cable rates, and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII and IX.

## **PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION**

### **Section 1.—Government Control over Agencies of Transportation**

With the modern development of new forms of transportation, it is becoming increasingly important to realize that the several agencies of transportation—carriers by rail, road, water and air—are, or should be, inter-related parts of an integral whole where each agency has its place in the efficient provision of necessary transportation in Canada. The Dominion Department of Transport was organized on Nov. 2, 1936, under authority of c. 34 of the Statutes of 1936, to unify in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation and radio.

The business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. For this reason there has been a strong tendency toward consolidation and amalgamation over the past half century. The outstanding example of these consolidations in Canada in recent years is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

Such control inevitably brings with it elements of monopoly and possible over-charge, and it has been deemed advisable in Canada, as in other countries, to set up authorities to control the rates to be charged and the other conditions under which services to the public are to be rendered by common carriers. This control, so far

as the railways within the jurisdiction of the Dominion Government are concerned, is now in the hands of the Board of Transport Commissioners. From time to time the regulatory authority of the Commission has been extended to a limited extent to other utilities (see below).

Besides the Board of Transport Commissioners, there exist, in several of the provinces, bodies that undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities and the Public Utilities Commission of Manitoba. In the three most westerly provinces these same duties are performed by provincial Departments of Railways.

**The Board of Transport Commissioners for Canada.\***—Introductory paragraphs explaining the situation that led to the introduction of railway regulation by commission in Canada, as well as other information relating to the organization of the Board, procedure, judgments, etc., are given at pp. 633-634 of the 1940 Year Book.

*Powers of the Board.*—With regard to transport by rail, these cover matters relating to the location, construction and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special; freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones that must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for a changed rate alters the extent of the territory in which a shipper can compete and on this account he is apt to appeal the case to the Commission.

By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways. By the Transport Act, the Board now has the power also to issue licences to persons or concerns entitled to engage in transport by air on the air routes declared to be under its jurisdiction by the Governor in Council. Since Jan. 15, 1939, and following a proclamation of the Governor in Council to that effect, the Board has also the power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes, as defined in Sect. 2, Subsection 1 (f), of the Transport Act, 1938. The Board is required to perform the functions vested in it under the Transport Act and the Railway Act with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways, ships and aircraft. The Board may require every applicant for a licence under the Transport Act to establish public convenience and necessity to its satisfaction and take into consideration the financial responsibility of a licensee or applicant. The Board may prescribe routes and schedules; every standard tariff and every amendment and supplement thereto shall require the approval of the Board before it becomes effective.

---

\* Revised by P. F. Baillargeon, Secretary, Board of Transport Commissioners for Canada, Ottawa.

## Section 2.—Government Control Over Agencies of Communication

### The Development and Control of Radiocommunication in Canada.—

The first radiocommunication (or "wireless", as it was known in those days) in Canada took the form of radiotelegraphy and was established in 1901 between Chateau Bay, Que., the terminus of the Government north shore telegraph line on the north side of Belle Isle Straits, and Belle Isle, Newfoundland. The stations were erected by the Marconi Wireless Telegraph Company of London, England, for the Telegraph Division of the Department of Public Works. Their purpose was to replace the existing cable service between the island and the mainland, which was continually being interrupted by ice. The first transatlantic radio message was transmitted from Glace Bay, N.S., to Clifden, Ireland, in 1903. The rapidity with which this new science expanded soon called for some kind of control, both domestic and international.

The first legislation under which radiocommunication was controlled in Canada was the Wireless Telegraph Act of 1905 (c. 49, Edw. VII). In the Revised Statutes of Canada, 1906, this Act became "Part IV—Wireless Telegraphy" of the Telegraphs Act, being c. 126, R.S.C. 1906. In June, 1913, Parliament passed the Radiotelegraph Act, and radiocommunication in Canada and in ships registered in Canada, was thereafter administered under the provisions of this Act and of the Regulations that were issued thereunder from time to time. The administration of the Act was vested in the Minister of the Naval Service at that time and subsequently in the Minister of Marine and Fisheries, and still later in the Minister of Transport. Owing to the rapid development in radiocommunication during the years that followed its passage, this Act was eventually repealed and replaced by the Radio Act, 1938, which became effective on July 1, 1938. In the interim, however, the Canada Shipping Act had already been revised (see 1936 Year Book, pp. 1107-1108), and those sections of the former Radiotelegraph Act pertaining to radio equipment in ships had been deleted from the latter and embodied in the revised Canada Shipping Act, 1934.

The first measures to govern radiocommunication having international scope were embodied in the "Radiotelegraphic Convention" which was drawn up at Berlin in 1906, and which was adhered to by the Dominion Government in 1907. Keeping pace with development, a revised International Radiotelegraph Convention was signed at London, in 1912, by nearly all the principal countries of the world, including Canada. The War of 1914-18 contributed to the delay in another international conference being held and it was not until 1927 that the International Radiotelegraph Convention of Washington was signed replacing the London Convention of 1912. Again, with a view to consolidating international control of the various types of communication services, the International Telecommunication Convention of Madrid, 1932, was drawn up and regulations governing all classes of communications were annexed thereto.

Up to this time, international telegraph and telephone communication services had been governed by the International Telegraph Convention of St. Petersburg, 1875. Although this Convention had never been revised until its fusion with the Radiotelegraph Convention at Madrid, the service regulations issued in accordance with its provisions had been amended at frequent intervals in order to keep pace with the development of the art.

In this connection, it is interesting to note that in the majority of countries, particularly in the old world, the domestic telegraph and telephone services are State-owned and -operated, whereas in Canada and in the United States practically all such services are owned and operated by private enterprise. For this reason, neither Canada nor the United States has ever subscribed to the St. Petersburg Convention.

For the same reason neither of these two countries is an adherent to the Telegraph and Telephone Service Regulations issued under the Telecommunication Convention of Madrid, 1932, as revised from time to time. The latest revision of the Radiocommunication Regulations annexed to the said Convention, and to which Canada subscribes, was effected at an administrative conference held at Cairo, Egypt, in 1938.

Transmission of the human voice by radio (radiotelephony) first came into being in Canada in 1918. Apart from its many applications in the field of marine and commercial communications, its value as a means of entertainment and of rapid communication with the public soon became apparent. The Marconi Wireless Telegraph Co. of Canada, Ltd. (now the Canadian Marconi Co.) was licensed by the Department to establish an experimental broadcasting station at Montreal with call letters XWA. After an experimental period, regular organized programs were begun in 1920 by the same Company. In 1922 the establishment of broadcasting stations on a general scale had commenced and 52 Private Commercial and Amateur Broadcasting Licences were granted during the fiscal year 1922-23. The matter of Dominion jurisdiction was questioned by certain of the provinces on different occasions, but on Feb. 9, 1932, the judicial committee of the Imperial Privy Council ruled that the control and regulation of radiocommunication rested within the jurisdiction of the Dominion Parliament. Following this ruling, the Canadian Radio Broadcasting Act was passed in 1932 and power was vested in the Canadian Radio Broadcasting Commission to control and regulate radio broadcasting in Canada. Without the use of transcontinental transmission wires and broadcasting stations of its own the Commission did not, at the outset, engage in national broadcasting on a substantial scale. In April, 1933, the nucleus of a national network of stations was secured by the acquisition and operation of the three stations of the Canadian National Railways situated at Moncton, Ottawa and Vancouver.

A further phase of national radio broadcasting in Canada was entered upon in 1936, when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see pp. 647-650). The new Act gave the Corporation much wider powers in the operation of the system, and was modelled very largely along the lines of the Act governing the British Broadcasting Corporation. The technical control of all broadcasting stations reverted to the Minister of Transport, who was also empowered to make regulations for the control of any equipment liable to cause interference with radio reception.

However, pursuant to the provisions of the Public Service Rearrangement and Transfer of Duties Act and of the War Measures Act, the duties, powers and functions vested in the Minister of Transport, under the Radio Act, 1938, and the Canadian Broadcasting Act, 1936, were transferred to the Minister of Munitions and Supply by Orders in Council passed in July and September, 1940. A further Order in Council, passed in June, 1941, transferred jurisdiction over the broadcasting activities of the Canadian Broadcasting Corporation to the Minister of National War Services.

In addition to being subject to the provisions of the Radio Act, 1938, and of the regulations issued thereunder, the administration of radio in Canada, including broadcasting, is subject to the International Telecommunication Convention (Madrid, 1932) and the Radiocommunication Regulations annexed thereto (Revision of Cairo, 1938) as well as to regional agreements such as the Inter-American Radiocommunications Convention and the North American Regional Broadcasting Agreement, Havana, 1937.

**War-Time Control of Radio Messages.**—Under the supervision of the Chief Radio Censor, Department of Transport, responsibility for observing censorship regulations governing message content is placed upon the licensees of more than 1,000 public and private commercial radio stations throughout the Dominion. All services in connection with inland point-to-point radio censorship are undertaken on a voluntary co-operative basis without expense to the Government.

**War-Time Control of Radio Broadcasting.**—In May, 1942, the five branches by which Censorship functions were previously performed, which were in five different Departments, were brought together in the Department of National War Services under a Director of Censorship. In the same month, the staffs of Radio and Press Censorships were amalgamated to form a new branch under the name of Censorship of Publications. Three Assistant Directors of Censorship to be known as Chief Censors of Publications were created. Of these, one Assistant Director of Censorship functions as Chief Censor of Publications—Radio.

The aim of radio broadcasting censorship is twofold: (a) To prevent the release of information of value to the enemy; (b) To prevent the release of material intended or likely to impair Canada's war effort or to prejudice Canada's relations with foreign powers.

The broadcast of public meetings is no longer prohibited. Any public gathering may be broadcast provided the radio station in charge of such broadcast accepts full responsibility for observance of Defence of Canada Regulations.

While spoken-word broadcasts are generally restricted to the English, French, Welsh and Gaelic languages, nevertheless, broadcasts in other languages are not limited, if initiated, sponsored or approved by a Dominion Government Department, or initiated by the Canadian Broadcasting Corporation, or approved by the Chief Censor of Publications—Radio.

**The Post Office.**—From its earliest days, and by reason of the nature of its services, the Post Office has operated as a government monopoly. At Confederation the provincial systems were transferred to the Dominion and the Post Office Act of 1867 established a service throughout Canada. An account of the war-time activities of the Post Office and administrative statistics appear at pp. 650-657.

### Section 3.—War-Time Control of Transportation\*

The extensive transportation systems of Canada were, in peace-time, capable of handling a much greater volume of traffic than conditions required. However, since the outbreak of war in 1939, the vastly increased movements of raw materials to the factories, and of munitions, troops, etc., to the theatres of war, have placed a heavy burden on existing transportation facilities. Early in the War, the Government took steps to insure that the vital transportation requirements of the war

\*This material has been compiled in co-operation with the Canadian Shipping Board, the Transport and Transit Controllers, and from material published by the Department of Munitions and Supply.

effort would be met and since then many important measures have been put into effect. The chief agencies of transportation control are the Canadian Shipping Board, and the Controllers of Ship Repairs, Transport and Transit and the Administrator of the Wartime Prices and Trade Board. The organization and functions of these agencies are described in the following subsections.

### **Subsection 1.—Control of Interior Transportation**

**Transport.**—The office of the Transport Controller, who is responsible to the Minister of Transport, was established in November, 1939, and created to facilitate the orderly and expeditious transit of war materials, troops, etc., and to prevent congestion at freight terminals and at the seaboard. The Transport Controller is also a member of the Canadian Shipping Board, the United Kingdom Ministry of War Transport, the Shipping Priorities Committee, Wartime Industries Control Board, the Fairmont Co., Ltd. (the Crown company dealing in rubber for war-time industries) and of various committees dealing with the movement of essential and critical materials, and acts as Transport Advisor to the various Government Departments, including Munitions and Supply, National Defence, Transport, Agriculture, etc.

The Transport Controller exercises control of goods, including civilian and defence materials, moving between points in Canada, and to the various ports for export, and also supervises the movement of civilian passengers and military, naval and air force personnel.

The work of the Office has grown to the point where a division of duties between the Executive Office and the actual supervision of rail and ship movement has become necessary. The Executive Office, assisted by committees of railway traffic and operating officials, deals with the more general questions and has issued orders curtailing the movement of civilian passenger traffic by the abolition of cheap fares for excursions, holidays, weekends and large parties. Improvement in the handling of Armed Forces personnel travelling in Canada has also been studied and, in conjunction with the Transit Controller, efforts have been made to induce employers to arrange staff vacations so that the stress of this travel is more evenly distributed. Other activities of the Controller are the regulation of the use of tank and refrigerated cars and of the maximum loading of freight cars and the chartering of passenger and freight vessels for essential war projects.

The supervision of ship and rail movement which is done in combination with the U.K. Ministry of War Transport, has necessitated the organization of the work into 10 divisions, 5 of which deal directly with the export of: (1) Foodstuffs to the order of the U.K. Ministry of Food; (2) Army vehicles and landing craft; (3) Explosives, guns, aeroplanes and general Government cargo; (4) Ammunition and agricultural implements; (5) Canadian military stores for overseas. The other 5 divisions deal with: (1) Office of Defence Transportation Permits, Aluminum and General Average matters; (2) Transportation arrangements for projects in Labrador, Newfoundland, etc., and the chartering of vessels for such projects; (3) The Maximum Carloading Division; (4) The Carloading Inspection Bureau; (5) The Superintending Sea Transport Officer.

**Civil Transit of Passengers.**—Local transportation facilities such as buses, street cars, etc., in many congested urban centres have also been heavily taxed as a result of the War. To control and relieve this situation as far as possible, a Transit Controller was appointed in August, 1941, responsible to the Minister of Munitions and Supply.

The Transit Controller has the power to issue and cancel permits or licences and to fix schedules of fares or rates for agencies transporting passengers for hire, including street cars, buses, taxicabs and ferries. He may also regulate the parking of vehicles. The Transit Controller is further empowered to stagger working hours in order to relieve transportation congestion. He may accordingly order any employer to arrange or alter the hours of employment of his employees, in order that such number of employees as the Controller may fix will, as far as possible, arrive or depart from their places of employment at such times as may be directed.

Local Wartime Transit Committees have been set up in nearly all the large cities in Canada for the purpose of implementing staggered hours and other adjustments to assist the public transit systems. In most centres the facilities are now loaded to capacity in rush hours and the demand is still increasing steadily. Changes in working hours must be still further expanded if the car and bus lines are to handle the loads.

The Wartime Industrial Transit Plan has been applied to war industries to make use of private passenger cars to transport those employees not adequately served by public transit. The Plan constitutes in effect a transportation facility supplementary to the public systems.

### Subsection 2.—Control of Shipping

**The Canadian Shipping Board.**—The Canadian Shipping Board was established in December, 1939, as an autonomous war-time body reporting to the Government through the Minister of Trade and Commerce. The former Ship Licensing Board which had been set up on Sept. 5, 1939, was incorporated in it as the Ship Licensing Committee. The members appointed were senior representatives of the Departments of External Affairs, National Defence for Naval Service, National Revenue, Trade and Commerce and Transport. In addition, the Transport Controller (see p. 568) was made a member and the Manager of the Shipping Federation of Canada was appointed Director of Shipping, and later Chairman. In December, 1941, the President of Wartime Merchant Shipping, a company established by the Department of Munitions and Supply to carry out Canada's merchant shipbuilding program, was added to the membership.

To facilitate close liaison with the United Kingdom Ministry of War Transport and with the United States Government shipping agencies (i.e., the United States Maritime Commission, the War Shipping Administration and the Office of Defence Transportation), the Board appointed representatives at London, England, and at Washington, D.C. Representatives were later appointed at Vancouver, B.C. Halifax, N.S., and Saint John, N.B., to assist the Board in matters relating to local shipping. Four experienced private shipping officials were appointed, in October, 1941, and subsequently, as technical advisers to assist the Director of Shipping.

The principal functions of the Board are to advise the Government on matters relating to water transport, to see that Canada's merchant marine is used to maximum efficiency in the war effort, to maintain essential sea and inland waters commerce and to administer, not only its own regulations governing Canadian vessels, but, in co-operation with the United Kingdom Ministry of War Transport and the United States War Shipping Administration, other measures designed to encourage neutral shipping to operate in the interests of the United Nations.

The Board exercises wide powers over Canadian merchant shipping in the war emergency. It has employed the small merchant marine that Canada possessed in the early stages of the War, to the greatest advantage.

The charter control was used as an instrument for co-operating with the United Kingdom Ministry of War Transport, in placing a ceiling on soaring charter rates. As from Aug. 1, 1941, more stringent ceilings on these rates, established in conjunction with the United Kingdom Ministry of War Transport and the United States Maritime Commission, were put into effect. The co-operation of the United States in this field, even before it entered the War itself, was of great assistance in curbing excessive inflation of shipping costs such as took place during the First World War. On Jan. 20, 1942, the Board issued a new schedule of time charter rates, materially reducing those of Aug. 1, 1941. Parallel action was taken by the United Kingdom Ministry of War Transport and by the United States War Shipping Administration, which was set up following entry of the United States into the War.

A system of Ships' Privilege Licences was introduced on Sept. 15, 1940, to parallel and supplement the British Ship Warrant System. This gave the Board power to deny facilities at Canadian ports to vessels failing to co-operate in the Allied war effort. This control is administered through the Department of National Revenue and the Collectors of Customs at the various ports.

From its inception one of the principal functions of the Board has been to provide shipping space to service Canada's essential overseas trade. Until 1941, in the absence of any Canadian agency to decide on shipping priorities, the Board itself had to assume the responsibility of deciding which materials should be granted shipping space available, and in what order. On Oct. 31, 1941, a Shipping Priorities Committee was created in the Department of Trade and Commerce and since then the Board has allocated shipping space for imports on the basis of the priority ratings established by this Committee. The Committee's ratings are reached by collating, in the light of the existing shipping situation as advised by the Shipping Board, the reports and representations received from the various commodity controllers and administrators of the Wartime Industries Control Board and the Wartime Prices and Trade Board. Space for exports is allocated in accordance with the priorities established by the competent authorities in the countries or areas of destination. This co-operation has of course been particularly close in the case of British Commonwealth areas and especially so in respect of Newfoundland and the British West Indies, whose vital requirements have been largely supplied by Canadian-controlled vessels.

The scope of the Board's work has widened considerably as the War has progressed. For example, its control was extended in 1941 to cover Great Lakes and St. Lawrence shipping in addition to ocean shipping, and the tonnage limits applicable for certain of its controls, originally fixed at 500 gross tons, have been moved downward until they now include all vessels over 150 gross tons and, in some cases, all vessels regardless of their tonnage. In the latter part of 1942 the Board was directed by the War Committee of the Cabinet to act as a clearing authority for all auxiliary craft required by the Departments of National Defence—Army, Navy and Air.

The shipping controls administered are merely means to the Board's chief purpose, which is the maintenance of the water movement of materials and commodities essential to the war effort. Details concerning this work cannot be given at present. It may be said, however, that to date all overseas and coastal movements vital to war production and to war-time economy have been maintained despite the intensity of the submarine campaign and the fact that many Canadian vessels have been allocated by the Board for indirect war service far from Canadian shores, and others have been made available for direct war service, such as that of

armed merchantmen, boarding and hospital ships, etc. This has been accomplished only by the Board's close direction of all Canadian cargo vessels and by co-operative arrangements made with the United Kingdom Ministry of War Transport and with the War Shipping Administration of the United States, whereby certain British, United States and other Allied and neutral vessels have been made available for Canadian service.

On the recommendation of the Board, an appreciable number of new cargo vessels being built in Canada have been turned over to the Park Steamship Company (a Crown company established under the Department of Munitions and Supply) for service in trades important to the United Nations' war effort. These vessels, being built by Wartime Merchant Shipping Limited, are of three types: 10,000 dead-weight ton, and 4,700 dead-weight ton, dry-cargo vessels; and 10,000 dead-weight ton tankers. Of the larger dry-cargo vessels, the Board has allocated a number to the Canada-United Kingdom service, while others have been placed in service to Australia, New Zealand, South Africa, India and the Middle East. The smaller vessels have been allocated for service between Canada and ports in Newfoundland, Labrador, the United States and the British West Indies and two have been allocated for British Columbia coastal service. The vessels retained for Canadian service are assigned by the Park Steamship Company to Canadian shipping firms for direct operating management under direction of the Board. The tankers are being assigned to Canadian oil companies for operation under the supervision of the Oil Controller and the Board.

**Ship Repairs and Salvage Control.**—As much of the construction work on the facilities required for the quick handling of ship repairs has been completed, the Ship Repairs and Salvage Control is able to meet the increased demands made upon it by all types of naval and merchant vessels of the United Nations. These demands are, in many instances, the result of direct enemy action and sometimes necessitate extensive repairs. In addition, ship salvage operations are being conducted on an impressive scale and valuable cargoes are being reshipped to original destinations or diverted into Canadian war industry. Steps have been taken to prevent the illegal sale of salvaged material to unauthorized persons and to provide compensation in a legal manner to fishermen turning salvage over to the Receiver of Wrecks.

The Controller of Ship Repairs and Salvage, operating with the U.K. Ministry of War Transport, ship owners, ship agents, shipyards, drydock operators, machine shops, foundries, ship salvage operators, cargo salvage operators and ship insurance agencies, assures quick action in the event of repairs being required in Canadian ports. To reduce delays to a minimum, members of the engineering staff of the Control are constantly in attendance at each important port.

### Subsection 3.—Control of Civil Aviation

Immediately after the War of 1914-18 it became apparent that aviation was destined to play an important part in Canadian development and that it would, therefore, be necessary to introduce legislation both to encourage and control flying. The Aeronautics Act, 1919, which is still the bulwark of Government control over civil aviation, was passed for that purpose. Briefly, it makes the Dominion Government responsible for: study and research in conjunction with other bodies; the construction and maintenance of airports and the naming of air routes; the

conclusion of international agreements on civil aviation; the preparation and enforcement of regulations governing aviation; the licensing of technical personnel, aircraft and airports; the investigation of accidents; and in general, the supervision of all matters connected with aeronautics.

The question of Dominion Government versus provincial control over aeronautics was placed before the Privy Council on Oct. 22, 1931. The Privy Council handed down the unequivocal decision that the Dominion Government has control over all matters pertaining to civil aviation and aerial navigation in Canada.

The Aeronautics Act, 1919, placed the control of civil aviation with the Air Board in 1919 and under the Department of National Defence in 1922. The steady increase in civil operations made it necessary to bring civil aviation under civil control, and the Department of Transport Act, 1936, transferred the control of the Civil Aviation Branch of the Department of National Defence to the Department of Transport.

By the Transport Act of 1938 the powers of the Board of Transport Commissioners were extended to cover air transport.

The Air Regulations, 1938, passed pursuant to the Aeronautics Act, prescribe the conditions under which civil flying in Canada may be carried out. All aircraft operators licensed in Canada are subject to these regulations, whether flying in Canada or abroad.

Aircraft are required to fly on the right side of a recognized airway; and at different elevations, in order to avoid the risk of collision. A separation in time is also provided; and a system of control, which records and reports all the movements of all aircraft on a particular airway, has been set up. Control centres have been established at Toronto and Montreal; and the airways controlled by these centres extend from Windsor to St. John's, Newfoundland, and as far north as North Bay, Ont. The Canadian system fits into and is completely co-ordinated with a similar system in the United States.

**Air Priority Control.**—Pressure of war business necessitated the establishment of a priority system on all domestic air lines in order to insure the movement of essential passengers and goods. Order in Council P.C. 3556 of Apr. 30, 1942, gives the Minister of Munitions and Supply, to whom the Air Services Branch is responsible, authority to direct an air carrier to give priority in the movement of such passengers or goods as may be necessary to the war effort. One control office is established in the Airways Section of the Civil Aviation Division at Ottawa and another at Edmonton.

### OFFICIAL STATEMENT OF AIR POLICY

The Official Air Policy of Canada was crystallized in the following statement made in the House of Commons by the Rt. Hon. W. L. Mackenzie King on Apr. 2, 1943. Because of its fundamental importance in the future development of civil aviation in Canada, this statement, together with the summary is printed in full.

1. During the War, a remarkable expansion of Canadian aviation has taken place—in the training of air and ground personnel, in the construction of airports and air navigation facilities, in the manufacture of aircraft, and in the extension of air transport services. Details of this expansion in aviation cannot be revealed at present, and therefore its magnitude is not generally appreciated. The Canadian Government is aware of the importance of the developments in aviation now in progress and intends that the people of Canada shall benefit from them to the fullest possible extent.

2. The expansion of air transport services during the period of the War has been confined to war requirements. Canada has concentrated on the development of the British Commonwealth Air Training Plan and on combat flying and, as a result, by agreement with our Allies, military air transport in the northwest has largely been undertaken by the United States army and on the northeast ferry routes by the ferry commands. When war necessities permit and suitable equipment can be obtained, the Government will encourage the further development within Canada of air transport services, to supplement and form part of an up-to-date transportation system for Canada by land, water and air. Transport by air requires close supervision on the part of the Government. The Board of Transport Commissioners will be responsible for regulating traffic matters and for allocating new routes apart from the lines brought under the Trans-Canada Air Lines Act. The Civil Aviation Branch of the Department of Transport will be responsible for the administration of traffic and safety regulations and for the physical development of airways. The Government intends to plan a number of routes suitable for post-war air services and offering traffic possibilities that will warrant a service. These routes will make use of aerodromes that have been developed for war purposes. The Government will also continue to develop airports and other facilities for weather reporting and communications, which will contribute to the expansion of Canadian air transport.

3. While the employment in a peace-time air transport service of all the air and ground personnel of the R.C.A.F. and all the men and women now employed in the aircraft industry in Canada will be impossible, a considerable number will be absorbed into the peace-time aviation industry. To this end, the Government has undertaken the design of distinctive Canadian types of transport aircraft suitable for post-war industry, in the hope that, when the war ends, a part at least of the equipment for Canadian air transport will be furnished by Canadian factories.

4. Trans-Canada Air Lines will continue to be the instrument of the Government in maintaining all trans-continental air transport services and in operating services across international boundary lines and outside Canada. The Government will encourage the company to obtain modern aircraft which will keep present services up to modern standards and will expand these services to the fullest extent that post-war conditions permit. The development of supplementary routes will continue to be left to private enterprise, unless considerations of public interest indicate that certain of these routes should be designated by the Government as routes to be operated by T.C.A. The operations of T.C.A. will continue to be limited to important services of a mainline character, where the volume of passenger and mail traffic would justify it.

With respect to international aviation:—

5. Canada has a geographical position that will enable it to play an important part in the development of international air transport routes. During the War, the development of international civil air routes must be deferred in favour of military aviation. Canada, to-day, is the fourth greatest military air power among the United Nations, and in the post-war period Canada can make an equally great contribution to civilian air transport.

6. The future of international air transport will be determined in large measure by negotiations between the Governments of the United Nations. The policy of the Government, at the moment, in dealing with all questions which affect international air transport, is to make temporary arrangements, leaving the issues open so that Canada may be able to support in international negotiations when they take place, whatever policy appears best at that time. The Government, however, intends to press vigorously for a place in international air transportation consistent with Canada's geographical position and progress in aviation. All concessions and privileges that have been granted by Canada to other countries as part of the war effort will terminate at the end of the War or almost immediately thereafter.

7. T.C.A. has by its charter the right to operate international air transport services and has already been designated as the instrument of the Canadian Government in air transport service across the North Atlantic, and in Canadian services to the United States. The fact that international negotiations of great importance must shortly take place confirms the wisdom of Government policy under which its freedom of action in international negotiations is not limited by the existence of private interests in international air transport services.

8. The Government has established an inter-departmental committee on international civil aviation to advise it on all matters of international air transport which affect Canada, and particularly on the attitude which Canada should adopt towards post-war developments. This committee has already been at work for a considerable time.

9. The problems of international air transport are, of course, immense and cannot be solved by one country. The Government is determined, however, that its influence on the course of events will be in the direction of international co-operation and colla-

boration. The Canadian Government is in complete agreement with the United Kingdom Government that "some form of international collaboration will be essential if the air is to be developed in the interests of mankind as a whole, trade served, international understanding fostered and international security gained".

#### SUMMARY

10. The policy of the Canadian Government on air transport may be summed up as follows:—

(a) The Government sees no good reason for changing its policy that Trans-Canada Air Lines is the sole Canadian agency which may operate international air services.

(b) Within Canada, Trans-Canada Air Lines will continue to operate all trans-continental systems, and such other services of a mainline character as may from time to time be designated by the Government. Competition between air services over the same route will not be permitted, whether between a publicly owned service and a privately owned service or between two privately owned services. There will remain a large field for the development of air transport in which private Canadian companies may participate, and, while preventing duplication of services, the Government will continue to encourage private companies to develop services as traffic possibilities may indicate.

(c) In order to prepare for forthcoming international negotiations on air transport, the Government is studying carefully the problems which will have to be dealt with in the negotiations.

(d) The Canadian Government strongly favours a policy of international collaboration and co-operation in air transport and is prepared to support in international negotiations whatever international air transport policy can be demonstrated as being best calculated to serve not only the immediate national interests of Canada but also our over-riding interest in the establishment of an international order which will prevent the outbreak of another world war.

Honourable C. D. Howe, Minister in Charge of Air Services, Department of Transport, addressing the House of Commons on Mar. 17, 1944, reported on a preliminary exchange of views among members of the Commonwealth in London in October, 1943, with respect to international discussions on air-transport policy. Mr. Howe was Chairman of the Canadian Delegation.\*

"A complete airing of ideas and opinions, with regard to international air transport after the war, took place and provided a useful introduction to the broader discussions which will take place in due course. Canada of course expects to participate in these further discussions also, and is at the moment taking part in discussions with the United Kingdom and the United States regarding the holding of exploratory conversations.

"No final decisions were taken in London, but I may say that it was evident from the outset that all participants had the same general objectives in view and that there was a broad basis of general agreement as to the way these objectives might best be obtained. All the participants were desirous of improving the air services between their territories, and agreed that such development must take place within an international framework, and that closed discriminatory systems could only promote disharmony, and endanger the chances of reaching that broad agreement which is necessary."

Outlining the Canadian Government's policy on international air transport, Honourable Mr. Howe pointed out that Canada occupied a strategic position athwart most of the air routes linking North America with Europe and Asia. This position carried with it great responsibilities and opportunities.

For many months the problem of international air transport has been the subject of exhaustive study by Canadian officials and of active consideration by the Government and a policy designed to meet these ends had been worked out. Canadian representatives in future international discussions on air transport will enter these discussions well prepared and with a clear view of the type of arrangement best designed to meet the needs of Canada for the development of international air services and provide for a fair share of international air transport, and at the same time establish an atmosphere of working co-operation among all other interested nations.

"I think we should be prepared to subscribe to the granting of general freedom of transit for international air services on a universal basis, so that national air services will automatically possess the right to cross the territory of other nations en route to their

\* The tentative and preliminary draft of an International Air Transport Convention upon which Canadian Officials and the Government have been working, was tabled by the Minister and is reproduced on p. 1626 of the House of Commons Debates, Vol. LXXXII (1944).

destinations, and to land in other countries for refuelling and reservicing without having to request the specific permission of each government concerned. However, in order to prevent misuse of this freedom, it would appear necessary to grant some international authority the power to supervise the manner in which it is carried out."

The Minister thought that such an international air transport authority should also have power to regulate international air services in order to prevent dangers of unnecessary and uneconomic duplication, prepare uniform traffic rules, safety and navigational aids. Powers of regulation could be obtained through control of rates and schedules, and licensing. Cross border services, such as those between Canada and the United States, should be considered in a special category and dealt with specially by the two countries concerned.

"The Canadian Government is of the opinion that some form of organization along the lines suggested would go far toward meeting the needs of the world for the establishment of effective international co-operation, in the provision of efficient and economical air services, and at the same time provide for the fair and equitable participation of Canada in these air services."

Summarizing the Canadian Government policy, Honourable Mr. Howe said the Government was determined that Canada, "by its participation in the framing of the general settlement of air transport will make as great a contribution as possible to the successful solution of this problem. Our representatives in the international discussions, therefore, will be authorized to support or initiate such proposals as, in the Government's opinion, will be likely to result in the establishment of an international air transport authority, with effective powers, supported by all governments concerned, which will further international co-operation and goodwill, ensure that international air routes and services are divided fairly and equitably among all member nations, meet the needs of the peoples of the world for efficient and economical air transport, and contribute to the establishment and maintenance of a permanent system of general security."

## PART II.—RAILWAYS

The treatment of rail transportation is divided into three sections dealing, respectively, with steam railways, electric railways and express companies.

### Section 1.—Steam Railways\*

The steam railway is still the most important transportation agency from the standpoint of investment and of traffic handled. The statistical field is more completely covered for this form of transportation than for any other, since there are fairly complete figures dealing with steam railway mileage, equipment, finances and traffic.

**Historical.**—A brief historical sketch of the development of steam railways in Canada is given at pp. 635-638 of the 1940 Year Book. Further details are given at pp. 616-623 of the 1922-23 Year Book, at pp. 601-603 of the 1926 Year Book and at pp. 694-698 of the 1934-35 Year Book.

#### Subsection 1.—Mileage and Equipment of Steam Railways

Although construction was begun in 1835 on the first railway in Canada—the short link of 16 miles between Laprairie and St. Johns, Que.—there were only 66 miles of railway in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and Great Western railways, as well as numerous smaller lines, were built. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last great period of railway building from 1900 to 1917 the Grand Trunk Pacific, National Transcontinental and Canadian Northern were constructed.

\*Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an "Annual Report on Railway Statistics", as well as numerous other reports, a list of which is given in Chapter XXX of this volume. Certain of the financial statistics of steam railways are compiled with the co-operation of officers of the Department of Transport.

Construction has been most active in Manitoba, Saskatchewan and Alberta during the past decade, while there has been a tendency for mileages to decline slightly in the other provinces, because of the abandonment of unprofitable lines. Of the 42,339 miles of single track operated in 1942, 21,583 were part of the Canadian National System.

### 1.—Record of Steam-Railway Mileage

NOTE.—Corresponding figures of total mileage of single track for the years 1835 to 1899 are given at p. 546 of the 1941 Year Book.

<sup>1</sup> Includes one auto-railer.

## Subsection 2.—Finances of Steam Railways

The tables in this subsection deal with the capital liability, capital invested, earnings, operating expenses, employees and their earnings and Government aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the subsection. Some further statistics of revenue are included in Table 13, where they are shown in relation to traffic. The statistics of individual railways, covering single-track mileage, capital, earnings and operating expenses, formerly shown in this subsection, may be found in the "Annual Report of Railway Statistics", published by the Bureau of Statistics.

**Capital Liability.**—The great increase after 1922 in the capital liability of the steam railways of Canada is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction after 1937, brought about by the Canadian National Capital Revision Act (c. 22, 1937), is explained at p. 644 of the 1939 Year Book.

3.—Capital Liability of Steam Railways, 1926-42<sup>1</sup>

NOTE.—Figures for the years 1876 to 1925, inclusive, are given at p. 649 of the 1927-28 Year Book.

Year	Stocks	Funded Debt	Total	Year	Stocks	Funded Debt	Total
	\$	\$	\$		\$	\$	\$
1926...	1,361,758,426	2,144,999,621	3,506,758,047	1935...	1,433,849,530	3,026,414,779	4,460,264,309

1934...	1,437,334,152	2,966,505,594	4,403,839,746				

<sup>1</sup> Does not include Canadian railway capital owned by Canadian railways.

**Capital Investment.**—The capital structure of the Canadian National Railways, changed by the Capital Revision Act, 1937, was reduced by \$262,770,972 (see p. 644 of the 1939 Year Book). The excess of capital liability as shown in Table 3 over the investments in road and equipment shown in Table 4 is accounted for by

loans and advances from the Government to cover deficits of the Canadian National Railways and by the fact that some railway stock issues represented little actual investment in physical property. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc.

#### 4.—Capital Invested in Road and Equipment of Steam Railways, 1937-42

<sup>1</sup> Details of this item are given in the "Annual Report on Steam Railway Statistics" issued by the Transportation and Public Utilities Branch of the Bureau of Statistics. The large credit in 1937 is due principally to the Canadian National Capital Revision Act. <sup>2</sup> Includes \$74,728,521 transferred to depreciation reserve and a credit of \$34,534,220 transferred to premium on capital and debenture stocks.

**Earnings and Expenses.**—The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to above 90 p.c. between 1917-20, and remained high thereafter. The United States Government took over the operation of the United States railways and increased the rates of pay of the railway employees when that country entered the First World War. The Canadian railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the depression period also maintained the high ratio. The period after 1938 showed a sharp decline in this ratio, due primarily to the greatly increased freight traffic occasioned by the War, and a subsequent acceleration in gross earnings.

#### 5.—Earnings and Operating Expenses of Steam Railways, 1936-42

**NOTE.**—Gross earnings and operating expenses for the years 1875 to 1914 are given at p. 434 of the 1916-17 Year Book. The analyses per mile of line and per train mile go back to 1908 only and are given for 1908 to 1916 at p. 435 of the 1916-17 Year Book. Corresponding figures for the years 1915 to 1925 are given at p. 550 of the 1941 Year Book and for 1926 to 1936 at p. 585 of the 1942 Year Book.

Year	Gross Earnings	Operating Expenses	Ratio of Expenses to Receipts	Per Mile of Line			Per Revenue Train Mile

GROSS EARNINGS AND OPERATING EXPENSES OF STEAM RAILWAYS  
1914-1942BILLION  
DOLLARS  
800

**Railway Salaries and Wages.**—The number of railway employees fluctuates with the volume of traffic, but not to the same extent. Salaries and wages are affected by the number of employees, by rates of pay and by the time worked. Since 1939 the influence of the War has resulted in a sharp upward swing in both the number of employees and the average rates of pay.

## 7.—Steam Railway Employment and Salaries and Wages, 1936-42

NOTE.—Corresponding figures for the years 1912 to 1935 are given at p. 551 of the 1941 Year Book.

**Government Aid to Railways.**—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Dominion and Provincial Governments and even for municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that system, except those for rolling-stock, have been guaranteed by the Dominion Government. No new land grants or cash subsidies have been advanced by either the Dominion or Provincial Governments since 1939 and the situation, as it existed at Dec. 31, 1940, is set out at pp. 587-588 of the 1942 Year Book.

During the era of railway expansion before the First World War, Provincial Governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railways. As these bonds mature they are paid off by the Canadian National Railways in large measure through funds raised by the issue of new bonds with Dominion Government guarantee. In this manner bonds guaranteed by the Governments of Ontario, Manitoba and Saskatchewan have been eliminated in recent years.

## 8.—Railway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1941 and 1942

<sup>1</sup> Does not include \$104,761,010 in 1941 and \$10,697,936 in 1942 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National System, on which interest and dividends are guaranteed by the Dominion Government.

### FINANCIAL STATISTICS OF GOVERNMENT-OWNED RAILWAYS

A description of the origin and growth of Government-owned railways in Canada is given at pp. 601-603 of the 1926 Year Book. This article describes their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Dominion Government and has been operated by the Canadian National for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways. To Mar. 31, 1943, the total cost of this railway was \$33,536,177, exclusive of the expenditure of \$6,274,150 on the terminal at Nelson and a loss of \$2,237,685 on operation. The operating surplus for the fiscal year 1942-43 was \$112,121.

The major portion of Dominion Government investments in railways consists of construction costs of the Intercolonial system, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the eastern provinces. The terminals at Churchill consisting of a grain elevator, a warehouse and docks have been transferred to the National Harbours Board and the investment removed from the railway account. Loans and advances to the Canadian National Railways for payment of operating deficits were charged to the Consolidated Revenue Account of the Dominion and also cleared from the railway account and other adjustments were made under the Canadian National Railways Capital Revision Act, 1937.

In addition to these expenditures the Dominion Government has made loans to the Canadian National and Canadian Pacific Railway companies for capital purposes, for special works programs and for equipment leased to the railways; the amounts outstanding on Dec. 31, 1942, were: Canadian National Railways, \$26,346,206; Canadian Pacific Railway, \$12,238,154; total \$38,584,360.

**Operating Finances of the Canadian National Railways.\***—Gross revenues, operating expenses and net revenues include only those from steam railway and commercial telegraph operations, but the deficits are for the entire system, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Dominion Government loans, amounting to \$530,832,598, and Government claims for interest, amounting to \$43,949,039, were cancelled as liabilities of the Railway and these have been eliminated from Table 10. The cash deficits, shown in the last column of the table, have been met by loans by the Government, by direct payment from July 1, 1927, and by reduction of working capital.

\* For detailed statistics of the operation and finances of the Canadian National Railways see the annual reports on "Steam Railway Statistics" and "Canadian National Railways" published by the Dominion Bureau of Statistics.

### 10.—Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges and Deficits of the Canadian National Railways,<sup>1</sup> 1936-42

NOTE.—Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. This table is condensed from the bulletin "Canadian National Railways, 1923-42" published by the Dominion Bureau of Statistics; see also pp. 647-648 of the 1940 Year Book. For figures for the years 1911-25, see p. 660 of the 1936 Year Book and for 1926-35, see p. 590 of the 1942 Year Book.

Year	Gross Operating Revenues	Operating Expenses	Income Available for Fixed Charges	Total Fixed Charges	Net Income Deficit <sup>2</sup>	Cash Deficit
	\$	\$	\$	\$	\$	\$
1936	186,610,489	171,477,690	8,975,091	52,172,437	43,197,346	43,303,394

1942	375,654,544	288,998,675	78,952,433	51,669,935	Cr. 27,282,498	Cr. 25,063,268

<sup>1</sup> Includes the Central Vermont Railway, Inc.

<sup>2</sup> Net income deficit includes appropriations for insurance fund and excludes interest on Government loans eliminated by the Capital Revision Act, 1937.

<sup>3</sup> Contributed by Dominion Government.

**Capital Revision of the Canadian National Railways.**—The Canadian National Railways Capital Revision Act, c. 22 of the Statutes of 1937, is dealt with at p. 644 of the 1939 Year Book. In the same edition, a table at pp. 644-645 shows a condensed consolidated balance sheet as at Dec. 31, 1936, adjustments authorized by the Capital Revision Act and the revised balance sheet as at Jan. 1, 1937.

**Capital Structure and Debt of Canadian National Railways.**—The share capital on Dec. 31, 1922, consisted of \$165,627,739 stock of the Grand Trunk Railway held by the Dominion Government and \$100,000,600 of the Canadian Northern Railway stock also held by the Dominion Government. There was also outstanding \$4,591,975 stock of constituent lines held by the public, of which \$25,375 has been retired. Table 11 shows the capital liabilities of the Canadian National Railways other than shareholders' capital. The amounts shown under "Active Assets" represent largely temporary loans and explain the large increases in 1940 over the respective preceding years.

### 11.—Debt of the Canadian National Railways, as at Dec. 31, 1937-42

NOTE.—A more detailed analysis may be found in the bulletin referred to in the headnote to Table 10. Figures for the years 1922-36 are given at p. 591 of the 1942 Year Book.

**Subsection 3.—Steam Railway Traffic**

In addition to an analysis of passenger and freight traffic statistics for all steam railways, a separate analysis is given of the operations and traffic of the Canadian National Railways, since, being controlled by the Dominion Government, the information is considered of special interest.

**Passenger and Freight Traffic.**—The average haul for freight, as shown in Table 13, is for all railways, which eliminates the effects of consolidation of railways and of interchanging freight between Canadian railways.

### 13.—Statistics of Passenger and Freight Services and Revenue Receipts, 1936-42

NOTE.—Corresponding figures for 1910-15 are given at pp. 628-629 of the 1922-23 Year Book, for 1916-30 at pp. 652-653 of the 1937 Year Book and for 1931-35 at pp. 592-593 of the 1942 Year Book.

<sup>1</sup> Includes express, baggage, mail, etc., cars.

<sup>2</sup> Duplications included.

<sup>3</sup> Revised since

the publication of the 1942 Year Book.

<sup>4</sup> Revised classification includes mileage previously classed as "mixed".

<sup>5</sup> Includes caboose miles and excludes miles made in passenger and non-revenue trains.

<sup>6</sup> Duplications eliminated, see Table 15 for details of freight carried.

**Mileage and Traffic of the Canadian National Railways.**—At Dec. 31, 1942, steam mileage of the Canadian National (including lines in the U.S.A. but exclusive of the Northern Alberta Railways and Toronto Terminals Railway, which

are controlled jointly by the Canadian National and the Canadian Pacific Railways) was 23,561. Including the Thousand Islands Railway, 4.51 miles, and the Muskegon Railway and Navigation Co., 5.25 miles, controlled but separately operated, the total steam mileage was 23,571. Including 115.4 miles of electric lines, the grand total was 23,686.

<sup>1</sup> Excludes electric lines.

<sup>2</sup> Work service excluded.

**Commodities Hauled.**—Total tonnage of freight hauled by the railways during 1942 was by far the greatest handled in any year. It amounted to 134,674,537 tons as compared with 116,808,091 tons in 1941 and 84,631,122 tons in 1939. This was an increase over 1939 of 59 p.c. and over 1928, the previous peak, of 13.5 p.c., but due to longer hauls the ton miles increased by 78 p.c. over 1939 and 35 p.c. over 1928.

Agricultural products loaded declined from 25,704,840 tons in 1941 to 24,137,351 tons in 1942. Loadings of animal products, mine products, forest products and manufactures and miscellaneous freight all showed substantial increases. Bituminous coal received from foreign connections increased from 4,410,773 to 6,028,987 tons. Crude petroleum from foreign connections increased from 31,085 to 1,940,297 tons and gasoline and petroleum oils showed similar increases; the greater part of this tonnage entered Canada from United States points.

### 15.—Commodities Hauled as Freight on Steam Railways, 1938-42

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National System, but the link of the C.P.R. line across Maine is included, as are the Canadian sections of United States railways.

1942.....	44	779	120	10,008	279	743	443	11,530

These accidents include all accidents in which railway trains were involved and accidents on railway property. The classification of accidents used in the Bureau's vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; also provincial statistics class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.

## Section 2.—Electric Railways\*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada and probably the first in North America, which ran between Windsor and Walkerville, was established early in June, 1886 (it is recorded that it was in active operation before June 11).

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities.

The single overhead-trolley system is used by all electric railways but Edmonton. Montreal and Winnipeg have begun using also a double overhead trolley and trackless trolley-buses (29 of these buses being in service in 1940). Of the 35 systems

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The annual report on "Electric Railways in Canada" published by this Branch, gives details of the operations of the individual railways, which are no longer published in the Year Book.

20 operated both electric cars and motor-buses in 1940, the increase in buses for these systems being 121, exclusive of the buses of the Brantford municipal system (8 in 1939 and 17 in 1940). Advantages of motor-buses are that the cars are not restricted to routes and there are no expenses for tracks. The capacity of each bus, however, is considerably less than that of an electric car. During 1940 the railways in Brantford and London ceased to operate and in Oshawa the railway continued only as a freight line. Motor-buses were substituted for passenger business by these three railways.

### Subsection 1.—Equipment of Electric Railways

As stated above, electric street cars are being displaced by motor-buses and in many municipalities they have been displaced entirely. For this reason statistics of total track mileage of electric railways were omitted from the 1942 edition of the Year Book, but lengths of main track are given in Table 20. The figures in these tables do not include the lengths of city streets or suburban roads on which bus lines are operated.

### Subsection 2.—Finances of Electric Railways

When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from the following tables. Consequently, fluctuations in revenues, etc., have been affected by variations in traffic and also by changes in the mode of local transportation. Despite these changing conditions the gross revenues of electric railways have continued to increase since the low point reached in 1933, and very marked increases have been shown in 1940, 1941, and 1942.

#### 19.—Financial Statistics of Electric Railways, 1936-42

NOTE.—Available figures for the years 1901 to 1907 are given at pp. 608 and 609 of the 1926 Year Book; for the years 1908 to 1918 at pp. 681 and 682 of the 1936 Year Book; and for 1919 to 1935 at p. 665 of the 1938 Year Book.

Year	Capital Liability			Investment in Road and Equipment	Gross Earnings	Operating Expenses	Ratio of Expenses to Receipts	Em- ployees	Salaries and Wages
	Stocks	Funded Debt	Total						
	\$	\$	\$	\$	\$	\$	p.c.	No.	\$

## Subsection 3.—Electric Railway Traffic

Statistics for electric railways reflect a steady building up of passenger and freight traffic since the depression years although mileage in operation has been reduced. The number of passengers carried by electric railways in 1940, 1941 and 1942 showed an especially sharp rise over previous years due to increased traffic resulting from improved conditions, and the curtailment of passenger automobile traffic as a result of the War.

## 20.—Statistics of Electric Railway Operations, 1936-42

NOTE.—Figures will be found at p. 676 of the 1933 Year Book for the years 1901 to 1910; at p. 681 of the 1936 Year Book for the years 1911 to 1918; and at p. 667 of the 1938 Year Book for 1919 to 1935.

Year	Miles of Road		Car Mileage			Passengers	Freight
	Total	With Double Track	Passenger	Other	Total		
	miles	miles	miles	miles	miles	No.	tons
1936.....	1,247.09	552.77	119,779,505	2,465,384	122,244,889	614,890,897	2,265,023

## Section 3.—Express Companies\*

"Express service is an expedited freight service on passenger trains"; but express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning. A brief history of the various express companies will be found at pp. 611-612 of the 1926 Year Book.

Goods are sent by express for quick transit, so that express rates do not compete with freight rates. Thus in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of 2½ times the

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The annual report on "Express Statistics", published by this Branch gives details of the operations of the individual companies, which are no longer shown in the Year Book.

maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates are subject to the approval of the Board of Transport Commissioners. Express companies are all organized under powers conferred by Acts of the Dominion Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels and baggage, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

**Express Company Operations.**—Four express organizations operate in Canada—three Canadian and one American. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National system and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. No statistics are available regarding the volume of traffic carried by express. Much of the traffic, of course, consists of parcels and small lots which would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

In the following tables the amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting the express matter, are shown under the heading "Express Privileges".

## 22.—Revenues and Expenses of Express Companies, 1936-42

NOTE.—Corresponding figures for the years ended June 30, 1911 to 1918, are given at p. 673 of the 1927-28 Year Book, and for the years 1919 to 1935 at p. 669 of the 1938 edition.

## PART III.—ROAD TRANSPORTATION\*

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor-vehicle traffic, highways and motor-vehicles are treated as related features of transportation. After an introductory section, which briefly summarizes provincial regulations regarding motor-vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of facilities, finances and traffic, similar to the treatment extended to other forms of transportation.

## Section 1.—Provincial Motor-Vehicle and Traffic Regulations†

**NOTE.**—In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. The sources of information for detailed regulations for specific provinces are given at pp. 594-595. See also "The Highway and Motor-Vehicle in Canada", an annual bulletin published by the Dominion Bureau of Statistics and obtainable from the Dominion Statistician, price 25 cents.

**General.**—The licensing of motor-vehicles and the regulation of motor-vehicle traffic lies within the legislative jurisdiction of the Provincial Governments in Canada. Regulations that are common to all the provinces are summarized here:—

**Operator's Licences.**—The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs and, in some cases, for those granted licences who have not reached the specified age.

**Motor-Vehicle Regulations.**—In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back, in the case of trailers). In order to conserve metal for war purposes, six of the provinces and both territories issued only one licence plate to motor-vehicles in 1943. Other plans of indicating registration are under consideration for 1944. Gasoline rationing for motor-vehicles began on Apr. 1, 1942, and is described at p. 523. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal treatment. Further

\* Except as otherwise indicated, the material in this Part has been revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces.

regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes, and provide that equipment include non-glare headlights and a proper rear light, with a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

*Traffic Regulations.*—In all the provinces, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. In line with other measures to conserve gasoline and rubber in war-time, a speed limit of 40 miles per hour was put into effect over the whole of Canada, beginning May 1, 1942. Slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor-vehicles must not pass a street car that has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid.

*Penalties.*—These ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting, while intoxicated, to operate a motor-vehicle.

There is such a wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor-vehicles, that it is impossible even to outline them satisfactorily in the space available here. The most important features are summarized in the annual bulletin referred to in the headnote to this Section, p. 593. The authorities responsible for the administration of motor-vehicles and the legislation governing vehicles and traffic are given below for each province.

**Prince Edward Island.**—*Administration.*—The Provincial Secretary, Charlottetown. *Legislation.*—The Highway Traffic Act (c. 2, 1936) and amendments.

**Nova Scotia.**—*Administration.*—Motor Vehicle Branch, Department of Highways and Public Works, Halifax. *Legislation.*—The Motor Vehicle Act (c. 6, 1932) and amendments and the Motor Carrier Act (c. 78, R.S.N.S. 1923) as amended by c. 29, 1937.

**New Brunswick.**—*Administration.*—Motor Vehicle Division, Department of Public Works, Fredericton. *Legislation.*—The Motor Vehicle Act (c. 20, 1934) and amendments.

**Quebec.**—*Administration.*—Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. *Legislation.*—The Motor Vehicle Act (c. 142, R.S.Q. 1941) and amendments.

**Ontario.**—*Administration.*—Motor Vehicles Branch, Department of Highways, Toronto. *Legislation.*—The Highway Traffic Act (c. 288, R.S.O. 1937) and amendments.

**Manitoba.**—*Administration.*—Provincial Treasurer, Winnipeg. *Legislation.*—The Highway Traffic Act (c. 93, R.S.M. 1940) and amendments.

**Saskatchewan.**—*Administration.*—Provincial Tax Commission, Vehicles Tax Division, and Highway Traffic Board, Revenue Building, Regina. *Legislation.*—The Vehicles Act (c. 275, 1940) and amendments.

**Alberta.**—*Administration.*—Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and Alberta Highway Traffic Board, Edmonton. *Legislation.*—The Vehicles and Highway Traffic Act (c. 275, R.S.A. 1942) and amendments, and Public Service Vehicles Act (c. 276, R.S.A. 1942), and Rules and Regulations. The Vehicles and Highway Traffic Act is administered by the Department of the Provincial Secretary, and the Public Service Vehicles Act by the Alberta Highway Traffic Board, Department of Public Works.

**British Columbia.**—*Legislation.*—The Motor Vehicle Act (c. 195, R.S.B.C. 1936), and the Highway Act (c. 116, R.S.B.C. 1936) and amendments thereto, as well as the Motor Carrier Act (c. 36, 1939). Administration and enforcement of the Motor Vehicle Act and enforcement of the Highway Act and the Motor Carrier Act is vested in the Commissioner of Provincial Police, Victoria, B.C., while the Highway Act is administered by the Minister of Public Works, Victoria, B.C., and the Motor Carrier Act by the Public Utilities Commission, Victoria, B.C.

**Yukon.**—*Administration.*—Territorial Secretary, Dawson, Yukon. Information regarding regulations may also be obtained from the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, No. 14, 1914, and amendments.

**Northwest Territories.**—*Administration.*—Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, assented to Mar. 26, 1941, and amendments.

## Section 2.—Roads and Vehicles

### Subsection 1.—Roads and Highways

**Historical.**—A brief description of the early colonization roads in Canada is given at p. 733 of the 1934-35 Year Book.

**Recent Highway Development.**—With the rapid increase in the percentage of motor-car owners to population (see p. 597), the demand for improved roads has become more and more insistent since the First World War. Furthermore, the advantages to be gained by attracting touring motorists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor-car has been of special economic advantage has been in rural areas. As a result, in the Census of 1941, every second farm reported a farm-owned motor-vehicle (1.93 farms per farm-owned motor-vehicle). This widespread rural ownership of automobiles has, in turn, brought about an improvement of secondary rural roads.

The table of road mileages (p. 596) includes all roads under provincial jurisdiction and local roads in the Maritime Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the southern portions are well supplied. The completion of the Trans-Canada Highway has provided a strategic link between Eastern and Western Canada that permits motorists to traverse the Dominion without entering United States territory.

The Alaska Highway, a 1,600-mile roadway, 24 to 36 feet wide, extends from Fort St. John, B.C.,\* through Whitehorse, to Fairbanks, Alaska. It was virgin territory, and a pioneer air route, in the spring of 1942; on Nov. 20, 1942, it was officially opened for wheeled traffic. About 10,000 United States engineer troops and 4,000 civilians, of whom half were Canadians, hewed their way through the bush, bridged the rivers, overcame mountain grades and surfaced a roadbed, to permit a continuous journey by car before the year was out.

The maximum grade in hill country is 10 p.c.; in foothill country, 5 p.c. The Dominion Government supplied the right-of-way and exempted all shipments of construction equipment and material from customs duty and the United States Government carried out the work and will maintain the Highway for six months after the War. The United States Government will then remove such equipment and installations as it wishes and the remainder in the Canadian sections will then revert to Canada. At present, travel over the Highway is restricted to those given permits by the United States military authorities.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1941 the total number of miles of street reported was 13,252, composed of: 3,234 miles of bituminous pavements; 941 miles of portland cement concrete; 1,695 miles of bituminous surfaces; 2,887 miles of gavel and crushed stone; and 431 miles of other surfaces; making a total of 9,188 miles of surfaced streets and 4,064 miles of earth roads. These figures for urban streets or roads are not included in the table of highway mileage.

\* Dawson Creek, about 30 miles to the southwest, is the railhead from which supplies are trucked in to Fort St. John. The existing road between Dawson Creek and Fort St. John has been improved and to all intents and purposes forms part of the main highway.

### 1.—Classification of Highways, by Provinces, 1941 and 1942

NOTE.—The date for which the mileage was reported is indicated for each province. The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures. Dashes indicate that no mileages were reported under the corresponding stub items.

## Subsection 2.—Motor-Vehicles

**Registration.**—The average population per vehicle registered was 7.6 in 1942. Total registrations numbered 1,524,153, a decrease of 48,631, or 3.1 p.c., as compared with 1941.

## 2.—Motor-Vehicles Registered in Canada, by Provinces, 1936-42

**NOTE.**—Registrations given here include passenger cars, trucks, buses, motor-cycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-35 are given at p. 668 of the 1937 Year Book.

Year	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Total <sup>1</sup>

<sup>1</sup> Include taxicabs.<sup>2</sup> Include tractors, road machines, flushers, municipal fire-engines, etc.

**Apparent Consumption of Automobiles in Canada.**—The apparent consumption of automobiles in Canada in any year may be computed by deducting the number exported from the sum of the production and imports; figures for the years 1931-40 are given at p. 607 of the 1942 Year Book. As military vehicles now constitute practically the whole output of the automobile factories of Canada, no later figures can be published.

### Section 3.—Finances of Road Transportation

The cost of road transportation to the people of Canada may be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations on owned motor-vehicles; and expenditures for freight and passenger services rendered by motor-vehicle public carriers such as taxi, bus and motor-transport companies. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other two headings. Sales of gasoline are given at p. 603, and revenues of motor carriers at pp. 601-602.

**Expenditures on Roads and Highways.**—Roads in Canada, except in the Territories and the National Parks, are under the jurisdiction of provincial and municipal authorities. The Dominion Bureau of Statistics made a compilation

of expenditures on highways, bridges, ferries and footpaths, for the period 1919-37. This compilation includes expenditures by the Dominion on roads, bridges, etc., in the National Parks, and by the provinces and by rural municipalities in Ontario on unemployment road projects. It also covers the bulk of the expenditures on rural roads and on bridges and ferries, which are links in the road systems. The present extensive provincial highway systems have been developed almost entirely since the First World War to meet the requirements of motor traffic. However, old gravel and water-bound macadam roads formed foundations in many places for new concrete and bituminous surfaces.

Total expenditures during the nineteen years (1919-37) were \$780,571,155 for construction and \$326,401,275 for maintenance; expenditures for plant and general items were divided between construction and maintenance on a *pro-rata* basis, where not allocated by the authorities. A table at p. 666 of the 1939 Year Book summarizes these expenditures on roads for the whole period 1919-37; Table 4 shows such expenditure during recent individual years.

#### 4.—Capital, Maintenance and General Expenditures on Rural Highways in Canada, by Provinces, 1938-42

NOTE.—Provincial expenditures are for their respective fiscal years ended on the dates indicated in Table 1, p. 596.

#### 4.—Capital, Maintenance and General Expenditures on Rural Highways in Canada, by Provinces, 1938-42—concluded

Item	1938	1939	1940	1941	1942
	\$	\$	\$	\$	\$
<b>Dominion-Provincial Distribution of All Expenditures</b>					
Dominion—net expenditures and subsidies	5,984,728	7,948,561	2,549,525	2,204,229	5,141,755
Provincial—net expenditures and subsidies	92,824,563	77,941,653	72,532,568	65,674,552	52,660,076
Municipal—net expenditures and subsidies	5,054,500	5,955,591	4,851,506	7,752,012	4,694,404
Subsidies from other sources <sup>1</sup>	Nil	Nil	Nil	358,392	343,702

<sup>1</sup> Includes payments from railways *re* elimination of grade crossings, etc., formerly operated under Dominion.

**Provincial Funded Debt Incurred for Highways.**—By far the greater portion of the highway expenditure has been made by the provinces and consequently must be paid out of provincial taxes. Payment for much of the construction costs has been deferred and this has accounted for part of the rapid increase in provincial funded debt since 1919. In 1919 the net funded debt of all the provinces was \$270,338,092; by 1942 it had increased to \$1,531,893,033, the portion chargeable to highways being \$792,544,151 or more than double the net debt for all purposes in 1919. As already explained at p. 595, the provincial systems of modern motor roads have been developed almost entirely since 1919 and prior to that time the provincial expenditures on highways were relatively small.

#### 5.—Provincial Government Funded Highway Debt and Annual Charges Thereon, 1940-42

NOTE.—Provincial Governments report for their respective fiscal years ended on the dates indicated in Table 1, p. 596.

<sup>1</sup> Not reported.

<sup>2</sup> Paid during the year.

**Provincial Government Revenues from Motor-Vehicles.**—The taxation of motor-vehicles, garages, chauffeurs, etc., is an important source of Provincial Government income. In every province the following licences or permits, duly issued by the provincial authorities, are required: motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and

service stations. A sales tax on gasoline is also levied by each province,\* the rates being 10 cents per imperial gallon in the three Maritime Provinces, 8 cents in Quebec and Ontario and 7 cents in the four western provinces. The more important sources from which provincial revenues from motor-vehicles are derived are shown in Table 6. Dominion Government revenues from import duties, excise and sales taxes are not included.

### 6.—Provincial Revenues from the Taxation of the Distribution and Operation of Motor-Vehicles, 1941 and 1942

NOTE.—Provincial Governments report for their respective fiscal years ended on the dates indicated in Table 1, p. 596.

<sup>1</sup> Dominion Government paid \$9,372,589 of total, all provinces except Alberta receiving subsidies to bring revenue up to 1941 revenue. Some of this was not paid until after end of provincial fiscal years. Alberta's revenue was above 1941 revenue. <sup>2</sup> Included with registration revenues. <sup>3</sup> Tax not applicable. <sup>4</sup> Incomplete, see footnote 2. <sup>5</sup> Included with trucks. <sup>6</sup> Incomplete, see footnote 5.

**Motor Carriers.**†—The lack of statistical information in regard to the increasing amount of passenger and freight traffic on the highways of Canada led to the institution of a census of motor carriers in 1941. Statistics of capital, revenues, personnel, wages and equipment are given in Table 7. The carriers were divided into two main classes: (1) passenger and (2) freight, and each of these was subdivided into two sub-classes: (a) carriers with revenues less than \$20,000, and (b) carriers with revenues of \$20,000 or over. Bus companies handling urban traffic exclusively were compiled as a class. Many street railway systems operate motor buses, but the statistics of such systems are included in electric railway statistics

\* As from Apr. 30, 1941, there is a Dominion tax of 3 cents per gallon in addition. For details of gasoline rationing in Canada, placed in operation on Apr. 1, 1942, see p. 523.

† Statistics of traffic carried are given at p. 603, under Section 4, Road Traffic. For statistics by provinces see "Motor Carriers, Freight and Passenger", obtainable from the Dominion Statistician, Ottawa, at 10 cents per copy.

and are not included here. Licensed carriers doing highway construction work, building air fields, etc., were excluded from the compilations. Also taxi operators and urban delivery trucks were excluded, except where their operations included interurban business. Reports of some 400 small operators were discarded because they were too incomplete but this exclusion did not materially affect the statistics.

Carriers operating as both passenger and freight carriers were classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies were small percentages of their total revenues.

#### Section 4—Road Traffic

Up to the present the motor-vehicle has affected passenger traffic of the steam and electric railways more than freight traffic. This diversion of passenger traffic has been effected largely by the private automobile, although the motor-bus is rapidly becoming more important and now operates between all large centres. The motor-truck also carries a considerable amount of freight, and statistics for the larger operators are given in Table 9.

**Gasoline Consumption.**—All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline consumed by motor-vehicles using the highways and streets and also on that used for an increasing number of other pur-

poses. However, the taxable gasoline is still largely consumed by motor-vehicles and indicates in a general way the increase or decrease in their use. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

Figures to the end of 1940 show a steady increase in gasoline sales since depression years. Later figures are, of course, materially affected by the conservation measures taken in 1941, and the system of gasoline rationing effective on Apr. 1, 1942 (see p. 523).

### 8.—Sales of Gasoline in Canada, by Provinces, 1938-42

Province	1938	1939	1940	1941	1942

<sup>1</sup> Exclusive of 2,975,000 gal. of aviation gasoline purchased and placed in storage by the Dominion Government.

**Highway Traffic.**—As explained at p. 601, certain statistics in regard to motor carriers were collected for 1941, and those relating to freight and passengers carried are presented in Table 9. Traffic data were not available for the majority of the small operators and about a third of the large truck companies had no reliable records of tons of freight handled, and consequently the freight statistics are incomplete. A difficulty in compiling weights, which is quite understandable, is that much traffic was carried on a load basis and not a weight basis. Records of passengers appeared to be fairly complete, possibly because tickets were sold and accounted for and the unit was not so complex as for freight carried.

### 9.—Traffic Carried by Motor Carriers with Revenues of \$20,000 or Over, 1941

Class of Carrier	Passengers			Freight tons
	On Regular Routes	Special and Chartered	Total	
	No.	No.	No.

<sup>1</sup> Not available.

**Motor-Vehicle Accidents.**—Motorists are required to report accidents but comprehensive statistics are not available for all provinces. The Vital Statistics Branch of the Bureau of Statistics compiles statistics on all deaths from motor-vehicle accidents and these are shown in Table 10. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 11 shows the number of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the Provincial Governments. It is quite possible that the latter reported some persons as injured who subsequently died from the injuries and these would be included in the fatalities of the vital statistics shown in Table 10, also accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, the figures of fatalities of Tables 10 and 11 are not in complete agreement.

#### 10.—Deaths Resulting from Motor-Vehicle Accidents in Canada, by Provinces, 1936-42

NOTE.—This table is compiled in the Vital Statistics Branch, Dominion Bureau of Statistics. Figures for the years 1926 to 1935 will be found at p. 578 of the 1941 Year Book.

## PART IV.—WATERWAYS\*

**The Canada Shipping Act.**—Legislation regarding all phases of shipping was consolidated under the Canada Shipping Act (c.44, 1934). The Act was a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act is a comprehensive piece of legislation and constitutes, in fact, the incorporation in the shipping law of Canada of features of international agreements and of British and previous Canadian legislation. A brief summary of the Act is given at pp. 681–683 of the 1938 Year Book.

## Section 1.—Equipment and Facilities

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation and miscellaneous works, canals and harbours. A subsection is added giving figures of administrative activities regarding pilotage service, steamship inspection, personnel and accidents to shipping.

\* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, harbours, administrative services, and Government Merchant Marine, by the Department of Transport and the National Harbours Board; graving docks and part of the financial statistics, by the Department of Public Works; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

### Subsection 1.—Shipping

Since all waterways, including canals and inland lakes and rivers, are open upon equal terms, except in the case of the coasting trade, to the shipping of all countries of the world, the commerce of the Dominion is by no means entirely dependent upon Canadian shipping. However, a large part of the inland and coast-wise traffic is carried in ships of Canadian registry.

**Canadian Registry.**—Under Part I of the Canada Shipping Act, every ship that falls under the definition of "British Ship" given in Sect. 6 of the Act and is controlled as to management and use in Canada, must, unless registered elsewhere in the Empire, be registered in Canada. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland navigation. A ship (whatever her qualification for British registry) that is not registered in any part of His Majesty's dominions, is not entitled to the privileges accorded to British ships. Vessels about to be built *may* be recorded, and vessels being built or equipped *must* be recorded, by a registrar of British ships under the Act. The procedure for the registration in Canada of British ships and the issuance of certificates is covered in Sects. 9–36. Sects. 64–70 govern the registry of alterations (or the registering anew if such be required) and lay down penalties for non-compliance with the requirements. The conditions governing transfer of registry are also laid down. A table showing the number and tonnages of vessels of Canadian shipping registry, by provinces, 1935–39, is given at p. 581 of the 1941 edition of the Year Book. War-time restrictions preclude the publication of these data for later years.

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see the tables under Sect. 3 (pp. 621–627) of this Part of the chapter. The tables are included there under traffic statistics because they relate more directly to traffic and services than merely to the shipping available. For an account of the shipping services operated by the Dominion Government, see pp. 610–612.

### Subsection 2.—Aids to Navigation and Miscellaneous Works

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under marine services at p. 610. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under radiotelegraphy, at p. 645.

Aids to navigation, excepting very minor ones, are listed in three annual publications of the Department of Transport covering the Atlantic Coast, Inland Waters and Pacific Coast, respectively. A summary table showing marine danger signals maintained in Canada during the fiscal years 1929–40 is given at p. 581 of the 1941 Year Book.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are

works to guard shorelines and prevent erosion, and also the control of roads and bridges that cross navigable channels. In order to prolong the season of navigation in important waters that freeze over in winter, ice-breaking operations are carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal: these operations are primarily intended to prevent flood conditions during the spring break-up.

### 1.—Duration of the Season of Open Navigation on the St. Lawrence Ship Channel, 1930-43

NOTE.—For the years 1882 to 1911, see the Canada Year Book, 1934-35, p. 756, and for 1912-29, p. 615 of the 1942 edition.

Year	Channel Open, Quebec to Montreal <sup>1</sup>	First Arrival from Sea, Montreal Harbour	Last Departure for Sea, Montreal Harbour	Year	Channel Open, Quebec to Montreal <sup>1</sup>	First Arrival from Sea, Montreal Harbour	Last Departure for Sea, Montreal Harbour

<sup>1</sup> "Channel Open" means it can be navigated although there may be floating ice still in the river.

### Subsection 3.—Canals

Before the period of extensive railway construction, which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes, and the Ottawa, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages and, to eliminate the toil of unloading, transporting and reloading at the portages, canals were constructed.

The earliest mention of canals in Canada is in connection with the Lachine Canal, begun by early French settlers in 1700. Only after the conquest of Canada by the British, however, were improvements of the main water routes made. In the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although some of the early canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country. However, since the development of railways in Canada and, even more, since the growth of motor-vehicle traffic, the canals, with the exception of those on the Great Lakes-St. Lawrence River route, are playing a minor part in the transportation activities of the country.

The principal canals of Canada are under the jurisdiction of the Dominion Department of Transport and each is accessible from the Atlantic Ocean. They serve six routes: (1) Montreal to Port Arthur and Fort William, via the St. Lawrence River and Great Lakes; (2) Montreal to the International Boundary near Lake Champlain, via the Richelieu River; (3) Montreal to Ottawa, via the Ottawa River; (4) Ottawa to Perth and Kingston, via the Rideau and Cataraqui Rivers; (5) Trenton, at the mouth of the Trent River on Lake Ontario, to the mouth of the Severn River on Lake Huron, and (6) St. Peters, Nova Scotia, on the Atlantic Ocean, to the Bras d'Or Lakes. The aggregate length of these six routes is 1,890 miles, the total of actual canal being 509 miles.

The names of the various canals along these routes, their locations and lengths, together with the number and dimensions of the locks thereon and other information will be found at pp. 626-629 of the 1926 edition of the Year Book, and in the pamphlet of the Department of Transport "Canals of Canada". A table showing the length and lock dimensions of canals as at the end of 1941 will be found at p. 583 of the 1941 edition of the Year Book.

Under the jurisdiction of the Dominion Department of Public Works are St. Andrews Lock (length, width and draft, respectively, 215, 45 and 17 feet) at Selkirk on the Red River, Man., and two or three smaller and widely separated locks in other provinces. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

#### Subsection 4.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Equipment designed to facilitate interchange movements includes the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Equipment may include cold-storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board, seven others by commissions that include municipal as well as Dominion Government appointees, and the remainder by harbour masters directly under the authority of the Department of Transport.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railways, pulp and paper, oil, sugar industries, etc. At a number of ports there are also graving docks which are dealt with separately.

#### 2.—Facilities of Six of the Principal Harbours of Canada as at Dec. 31, 1942 and 1943

NOTE.—The facilities include those under the control of other organizations as well as those of the Board at these ports.

**National Harbours Board.**—A description of the origin and functions of the National Harbours Board is given at pp. 679-681 of the 1940 Year Book. The Board is responsible for the administration and operation of the following properties (representing a capital investment of approximately \$225,000,000): port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal and the Second Narrows Bridge at Vancouver. Operating revenues and expenses for these properties are given in Table 11, pp. 618-619.

**Public Harbours and Harbour Masters.**—In other ports, the Governor in Council may create public harbours by proclamation (Part X of the Canada Shipping Act c. 44, 1934), and the Minister of Transport may from time to time appoint harbour masters for these ports, who will administer them under rules and regulations approved by the Governor in Council. Remuneration of these harbour masters will be made from fees levied on vessels under the terms of the Act.

**Graving Docks.**—The Department of Public Works of the Dominion Government has constructed five dry docks and assisted in the construction of seven others by means of subsidies. Tables at p. 618 of the 1942 Year Book give the dimensions of these docks and the amount of subsidy paid to the privately owned ones.

#### Subsection 5.—Marine Services and Operations of the Dominion Government

The services covered by this subsection are those dealing with pilotage service, steamship inspection, sea-faring personnel and accidents to shipping, and the operations are those of the Canadian Government Merchant Marine, and the Canadian National (West Indies) Steamships.

**Pilotage.**—This service functions under the provisions set forth in Part VI of the Canada Shipping Act (c. 44, 1934). Qualified pilots may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance.

There are 42 pilotage districts in Canada, 9 of which (Sydney, Bras d'Or Lakes, Halifax, Saint John, Quebec, Montreal, St. Lawrence-Kingston-Ottawa, British Columbia and Churchill) are under the Minister of Transport as pilotage authority. The Pilotage District of New Westminster, B.C., is under a local authority. The other districts function under local pilotage authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act.

A table showing the number and aggregate tonnage of ships using pilots for the major Canadian ports during the fiscal year 1940, is given at p. 586 of the 1941 edition of the Year Book. Later figures are not available for publication due to war-time restrictions.

**Steamship Inspection.**—The Steamship Inspection Service provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff, at Ottawa, and staffs of inspectors at the principal ocean and inland ports. The Act provides for a Board, known as the Board of Steamship Inspection, which decides on questions arising out of the administration of the Act. The Steamship Inspection Service is responsible for the administration and carrying out of the provisions of Part VII of the Act respecting the periodic inspection of power-driven ships and the

issue of inspection certificates, the assignment of load lines, the conditions under which dangerous goods may be carried in ships, and the protection against accident of workers employed in loading or unloading ships. The Steamship Inspection Service is also responsible for the administration and carrying out of the provisions of Part II of the Act relating to the certification and employment of marine engineers.

**Seamen Shipped and Discharged.**—In previous editions of the Year Book the numbers of seamen shipped and discharged at Canadian ports under the provisions of the Canada Shipping Act (R.S.C. 1927, c. 186 and c. 44, 1934) are given. Figures for the years 1908 to 1917 will be found at p. 690 of the 1938 edition, and for the years 1918 to 1939, at p. 587 of the 1941 edition.

**Wrecks and Casualties.**—The 1911 Year Book, at p. 381, gives details of the numbers of wrecks, their net tonnage, the number of lives lost and the amount of stated damages, for the years 1870 to 1910. The series is continued at p. 691 of the 1938 Year Book for the years 1911 to 1920 and at p. 620 of the 1942 Year Book for 1921-40. As the publication of these statistics is not permissible during the War, the series has been discontinued.

**Canadian Government Merchant Marine.**—The circumstances under which the Canadian Government became possessed of and responsible for the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book. A table showing the operating results from 1919 to 1936 is given at p. 689 of the 1937 Year Book.

The original fleet of the Canadian Government Merchant Marine Ltd. consisted of 66 vessels with a total deadweight tonnage of 391,212. The original cost of the fleet was \$79,661,921 and the capital loss thereon was \$74,239,356 the total capital recovery of \$5,422,565 being made up as follows: (1) the sale of 56 vessels for \$2,378,018; (2) the proceeds of insurance on 4 vessels lost, amounting to \$2,111,475; (3) the sale of 6 vessels to the Canadian National (West Indies) Steamships, Ltd., for \$933,072.

The charter of the Canadian Government Merchant Marine, Ltd., and its subsidiary companies, although inactive since 1936, had not been surrendered and in 1940 the Company was reconstituted and is now operating on behalf of the Canadian Government certain ships seized in prize and either requisitioned for use of the Canadian Government or condemned by the Court as prize.

These operations are due to the War and for the present it is not possible to supply information for publication concerning them.

**Canadian National (West Indies) Steamships.**—In conformity with the Canada-West Indies Trade Agreement Act of 1926 (16-17 Geo. V, c. 16), the Dominion Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd. Due to war conditions, no information later than that published at p. 588 of the 1941 Year Book has been made available.

#### 4.—Financial Statistics of Canadian National (West Indies) Steamships, Ltd., 1936-42

NOTE.—Statistics for 1929-35 are given at p. 620 of the 1942 Year Book.

### Section 2.—Financial Statistics of Waterways

The principal statistics available that give any idea of the cost of waterborne traffic consist of the record of public expenditures on waterways. Such expenditures may be classified as capital expenditures, or investments and expenditures for maintenance and operation. Revenues from operation are also recorded. Undoubtedly, in so far as capital expenditures for the permanent improvement of waterways are concerned, those of the Dominion Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine and the Canadian National (West Indies) Steamships, as shown above, has come almost entirely from private sources such as railway companies, steamship companies, industrial corporations and private individuals. No figures are available regarding private investments in shipping except those appearing in the reports of the operating companies which cover only a portion of

the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic. In the case of railways, statistics show fairly completely: (1) the investment in plant, roadbed, etc.; (2) the revenues of the railways or the annual payment by the people of Canada for the passenger and freight transportation; and (3) the annual deficits which are also indirectly paid by the public whether as investors or taxpayers. No such data can be given for waterborne traffic.

**Capital Expenditures.**—So far as capital expenditures on Canadian waterways are concerned, the only figures available are those that are compiled from the Balance Sheet of the Dominion or the annual reports of the Departments of Transport, Public Works and Finance but such investments or capital expenditures cannot be regarded as any indication of the present worth of the undertakings represented. The costs of building canals and other waterways and permanent work to facilitate water transportation in Canada are represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works where they had been superseded, as in the first Welland Canals for instance. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the costs of maintenance and improvements or the operation of these works, such charges having been made to the consolidated fund as annual expenditures and not to capital account. Table 5, which shows capital expenditures on canals, marine services and miscellaneous water transport facilities to have reached the grand total of over \$378 million, must be interpreted with the above qualifications in mind. In Table 6 the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1941 and 1942: their source is the Annual Report of the National Harbours Board and they are, of course, in addition to the capital expenditures of Table 5. These figures reflect the capital situation in regard to the National Harbours of Canada far better than those of Table 5 do in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they have also been subject to deductions for depreciation and the scrapping or abandonment of plant and more nearly approach the present value of the properties under the administration of the National Harbours Board.

**5.—Capital Expenditures of the Dominion Government on Canals, Marine Services and Miscellaneous Water Transport Facilities, as at Mar. 31, 1942 and 1943**

**Waterway Expenditures and Revenues on Consolidated Fund Account.—**

Expenditures under this heading are mainly for the operation and maintenance of various facilities for water transport, but unfortunately the line between operation and maintenance expenditure is not as finely drawn as is desirable in Tables 7 to 9.

In addition to the recurrent expenditures to facilitate water transportation shown here, the Dominion Government annually expends considerable amounts to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 12, and for the maintenance and operation of radio stations to aid navigation as shown in Table 3 of Part VII of this chapter. Previous to the 1941 edition of the Year Book, the cost of construction, operation and maintenance of radiotelegraph stations was shown as a part of waterways expenditures. However, in addition to aiding navigation, many of these stations provide a commercial service, while radio developments in connection with airways have increased greatly. In view of these changing conditions, expenditures and revenues of the radiotelegraph service are now shown separately in Part VII of this chapter, in keeping with the revised organization and accounting of the Department of Transport. Operating expenditures and revenues of facilities administered by the National Harbours Board are shown separately in Table 11. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board, is indicated by the increase of consolidated operating income from \$2,452,000 in 1935 to \$4,942,089 in 1942.

### 7.—Expenditures on Canals Charged to Consolidated Fund Account, Fiscal Years 1942 and 1943

NOTE.—Compiled from the Annual Reports of the Department of Transport. The annual figures are exclusive of transfers between departmental accounts.

## Section 3.—Water Traffic and Services

Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not available. Indeed it would be very difficult to obtain a record of the traffic handled by small independent coasting vessels. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors, of cargoes of vessels trading between Canadian and foreign ports and of all cargoes that pass through the canals.

### Subsection 1.—Shipping

A brief description of the early development of Canadian shipping is given at pp. 597-598 of the 1941 edition of the Year Book. Shipping statistics are compiled from reports collected by customs officers at customs ports; consequently they are affected by customs regulations and include only data for vessels trading in and out of ports at which these officers are employed.

For years prior to and including the fiscal year 1937, the statistics were summarized by the customs officer at each port and compiled by the Department of National Revenue; for subsequent years, compilations were made by the Dominion Bureau of Statistics. Effective Apr. 1, 1940, each vessel departing from port makes a statistical report which is forwarded to the Bureau and from these reports all compilations of shipping statistics are made.

With this change of procedure, changes have been made in the recording of the data. Cargoes are required to be reported in tons of 2,000 lb. or in tons of 40 cu. ft. Although previous reports did not define the ton it is quite probable that the long ton of 2,240 lb. was used. Reports are not made now for vessels of less than 10 net tons and the tonnage of tugs is the gross ton and not the net ton as for cargo vessels. Fishing vessels are not required by customs regulation to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

Vessels in coasting service and vessels fishing in Canadian waters are not required by customs regulations to report any details of cargoes loaded or unloaded. Consequently, cargo data are available only for vessels in foreign service. The cargoes are not cargoes on board but cargoes unloaded and loaded at the respective ports.

### 13.—Vessels Entered at Canadian Ports, 1935-43

**Subsection 2.—Canal Traffic**

Since the canals of Canada are open to the vessels and traffic of all nations upon equal terms, United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 16 and 18. A table showing the principal commodities carried through Canadian canals during the navigation seasons 1936-40 is given at p. 603 of the 1941 edition of the Year Book. More complete details of the traffic through canals may be found in the annual report "Canal Statistics" published by the Dominion Bureau of Statistics.

**16.—Traffic Through Canadian Canals, by Nationality of Vessels and Origin of Freight, Navigation Seasons 1935-42**

NOTE.—Figures include duplications where cargoes use two or more canals. For Canadian canal traffic from 1886 to 1899, see the 1902 Year Book, p. 398; for the figures of 1900 to 1910, the 1933 Year Book, p. 697; and for 1911 to 1934, p. 703 of the 1938 edition.

<sup>1</sup> Figures for the U.S. include a small percentage to or from ports of other foreign countries.

The figures in Tables 16 and 18 include duplications where the same freight passes through two or more canals, but in Table 19 duplications in the traffic passing

through the St. Lawrence and Welland Ship Canals and the Canadian Lock at Sault Ste. Marie, which amounted to 3,075,984 tons, have been eliminated.

Grain transhipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States lock at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne or other transshipping port.

Traffic through the Sault Ste. Marie Canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the last ten years for which records are available, and in 1940 was almost three times as heavy. It has varied from a low of 20,484,000 tons in 1932, which was less than the Panama traffic, to a high of 120,201,000 tons in 1942. The dominant traffic, from a tonnage aspect, is iron ore. During the past 50 years this has fluctuated from 4,901,000 tons in 1892, a low of 3,607,000 tons in 1932 and an average of 50,000,000 tons in the 1920's to a high of 94,327,000 tons in 1942. Although wheat has ranged as low as only 7 p.c. of the iron-ore tonnage, its value has generally been greater than that of the iron-ore traffic, and has been the most valuable single commodity passed through the Canals; in 1928 the value of wheat passed through the canals was 40 p.c. of the value of all traffic. Other grains have been about a quarter to a fifth of the wheat tonnage and a smaller ratio of the value.

Bituminous coal has generally been second in tonnage to iron ore and a large part of it is carried by the ore vessels when returning for a cargo of ore.

The tonnage of the three principal commodities and the tonnage of all freight passed through the canals for the 30 years, 1913 to 1942, inclusive, are plotted in the following chart.

**The Panama Canal.\***—The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to British Columbian ports, from which vessels leave direct for British and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on transcontinental rail rates is a valuable one. During the War of 1914-18 the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place, and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage nevertheless assumed considerable proportions. The outbreak of war in September, 1939, has again reduced the supply of shipping for the ordinary commerce of the nations involved. It is probable that under these circumstances transcontinental rail transportation has been substituted in Canada for some of the traffic formerly passing through the Panama Canal.

\* Revised and figures supplied by the Governor of the Panama Canal Zone.

**20.—Traffic to and from the East and West Coasts of Canada via the Panama Canal,  
Years Ended June 30, 1929-40<sup>1</sup>**

NOTE.—Figures for the years 1921 to 1928 are given at p. 707 of the 1938 Year Book.

<sup>1</sup> War-time restrictions preclude the publication of data for 1941 and later years.

A table at p. 636 of the 1942 Year Book shows the total commercial traffic through the Panama Canal in the years 1929-40.

### Subsection 3.—Harbour Traffic

The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded into or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the 'in transit' movement of vessels that pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small and are without the staff necessary to obtain a detailed record of freight handled. Similar statistics of cargo carried by vessels in coastwise and inland international shipping are not available. The National Harbours Board administers a number of the principal ports of Canada and for the years 1936-39, has published a record of the principal commodities in water-borne cargo handled at the ports under its control. These are shown for 1939 at pp. 701-702 of the 1940 Year Book. Owing to war-time restrictions the publication of later statistics has been suspended.

## PART V.—CIVIL AIR TRANSPORTATION\*

NOTE.—The treatment of military activities and organizations falls more properly under the subject of National Defence (see "Air Force, Royal Canadian" in the Index).

Before the War, civil aviation in Canada was playing an ever-increasing part in the daily life of the nation. The aeroplane was taking a leading part in mail delivery both in outlying and inter-urban areas, in transportation of passengers and goods to the outposts of civilization; in photographing and mapping uncharted areas; in exploration and prospecting; in the movement of hunters and trappers to other-

\* Descriptive and administrative information has been prepared from material supplied under the direction of J. A. Wilson, Director of Air Services, Department of Transport, while statistics have been compiled by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

wise inaccessible areas; and finally in carrying tourists into the wilds of Canada for hunting, fishing or the sheer joy of escaping from civilization. Along with all this is the development of inter-city traffic on a large scale from the Atlantic to the Pacific.

The War has made it necessary to drop all of this work in the interest of national defence. The tourist business is at a complete standstill and the use of aircraft for trapping has had to be curtailed. Prospecting for certain strategic minerals has continued but on a restricted scale, mapping and air photography has been carried out only on new military routes, while contact with outlying settlements is limited to bare necessity.

Most of the air companies are now engaged in carrying out war contracts, some in the delivery of men and material urgently needed in the development of projects that cannot be served by road or rail, some in the training of aircrews and mechanics and some in the overhaul, repair and maintenance of aircraft in connection with the British Commonwealth Air Training Plan. The position of Canada in the air has been enormously strengthened by improved technology and a vast increase in the number of trained personnel, by the strong organizations built up during the War and by greatly increased experience in operation.

### Canadian Scheduled Air Transport Services

**Trans-Canada Air Lines in 1943.**—During 1943, Trans-Canada Air Lines continued to grow. It was not so much a year of expansion as of intensification of existing services. The only route extension was from Vancouver to Victoria, but in September a third daily flight between Montreal and Winnipeg was added to the schedules and a third between New York and Toronto. In the first seven months of the year (July is the latest month for which figures were available at time of writing), T.C.A. aircraft flew 4,990,244 miles, an increase of 608,507 miles over the corresponding period in 1942; mail volume was nearly doubled, express nearly trebled, and the number of passengers carried increased by 21,125.

From Jan. 1, 1943, to the end of July, Trans-Canada carried 2,048,774 lb. of mail, an increase of 991,708 lb. over the first seven months of the previous year; an express load of 406,206 lb.; an increase of 265,049 lb.; and 78,215 revenue passengers, an increase of 21,125. An example of the growth of traffic was July, the heaviest month for air mail in the Company's history up to that time. The amount carried was 316,547 lb., an increase over June of 7,428 lb., and over July, 1942, of 123,576 lb.

An important event of the year was the inauguration of a transatlantic service, a war-time operation Trans-Canada assumed on behalf of the Government. The Air Lines continued its maintenance work for the British Overseas Airways Corporation return ferry service across the Atlantic and, in its Winnipeg shops, overhauled many aircraft engines, propeller assemblies, instruments and accessories for the Royal Canadian Air Force, for schools operating under the British Commonwealth Air Training Plan, and for the British Overseas Airways Corporation.

Trans-Canada has created at Winnipeg one of the most complete aircraft engineering and maintenance shops on the continent. Here, trained staffs keep the fleet of twenty-four transports in the finest flying trim and provide shop service for military aircraft.

Routes now in operation total 4,903 miles, made up as follows: St. John's, Newfoundland, to Victoria, B.C., 3,911 miles; Halifax to Moncton, 120 miles; Toronto to New York, 365 miles; Toronto to London and Windsor, 206 miles; Lethbridge to Calgary to Edmonton, 301 miles.

A high percentage of the male personnel of T.C.A. has enlisted in the Armed Forces and manpower is one of the serious problems confronting the Air Line. The policy of employing women and ex-service men was continued during the year. More than 35 p.c. of the staff is now female.

**Canadian Pacific Air Lines.**—The consolidation of the many independent commercial operators chiefly engaged in servicing the mining industry in northern Canada has been proceeding gradually for the past two years. The Canadian Pacific Air Lines now controls the operation of Canadian Airways Limited, Arrow Airways Limited, Ginger Coote Airways, Prairie Airways, Mackenzie Air Service, Yukon Southern Air Transport Limited, Dominion Skyways Limited, Quebec Airways, Wings Limited, Starratt Airways and Transportation Company.

The component companies of the C.P.A. in 1942 flew approximately 5,300,000 miles, carried 60,000 passengers and 10,000,000 lb. of freight, express and mail. Their employees numbered 7,000. Ninety per cent of the Company's business is now for war purposes—in the northwest for the important developments in these remote districts arising out of the joint defence programs of Canada and the United States for the defence of northwestern Canada and Alaska; in the northeast in connection with the construction of plants for war industries and aerodromes. "Bush" services have been maintained in all important areas, the decline in gold mining having been compensated for by the increased war-time search for essential war minerals.

To meet the increasing traffic, more efficient and larger twin-engined aircraft have been placed in operation on several routes replacing the former ski-float operations. Up-to-date air navigation facilities, including aerodromes, radio ranges, improved weather and communication services and lighting are also being installed so as to permit of all-weather, night and day operation. Every effort is being made to bring such services up to main-line standards as rapidly as possible.

**Independent Air Lines.**—Although many of the principal operating companies have been absorbed by C.P.A., there still remain independent organizations in this field. Typical of these are Maritime Central Air Lines which operates a mail, passenger and express service between Moncton, Saint John, Summerside and Charlottetown, P.E.I.; the M. and C. Aviation Company which operates a licensed air-mail, passenger and express service from Prince Albert to northern Saskatchewan points and, in addition, an engine and overhaul shop under contract with the Department of Munitions and Supply.

## Section 1.—History and Administration

### Subsection 1.—Development of Aviation in Canada

**Historical Sketch.**—A brief historical outline of the development of aviation in Canada appears at pp. 710-712 of the 1938 Year Book.

**Trans-Canada Airway.**—An article describing this Airway appears at pp. 703-705 of the 1940 Year Book.

**Transatlantic Air Service.\***—The work done to establish an air service between Canada, the United States and the British Isles via Newfoundland up to the outbreak of war is described at pp. 705-707 of the 1940 Year Book. Transatlantic air services have been continued from the United States via Bermuda and the Azores to Lisbon.

\* See also pp. 572-575.

**Pre-War Civil Aviation and the Defence Program.**—An article describing the developments of importance in civil aviation prior to the outbreak of war in 1939, and also the contribution that civil aviation has made to the air defence program, is given at pp. 608-612 of the 1941 edition.

### Subsection 2.—Administration

The 1942 Year Book, at pp. 638-639, outlines the administrative arrangements for the control of civil aviation. Later developments are given in the Section on War-Time Control of Transportation, at pp. 571-575.

## Section 2.—Airports and Aircraft

### Subsection 1.—Summary Statistics of Civil Aviation

From commercial operators of aircraft, aeroplane clubs, etc., the Bureau of Statistics collects and compiles civil aviation statistics, with the exception of data on licences and accidents, which are reported by the Civil Aviation Division of the Department of Transport. To preserve as much continuity with earlier statistics as possible, figures for certain important items are given in Table 1 for the years 1937-42. However, statistics collected since 1936 have been somewhat enlarged and consequently for some items in Table 1 and for much of the data in the following tables no figures are available prior to 1936.

The commercial companies are divided into two classes, those engaged principally in international flying between Canada and the United States and those engaged exclusively or almost exclusively in flying between Canadian stations. A small amount of strictly Canadian flying is done by the international companies.

Regular flying on the Montreal to Vancouver portion of the Trans-Canada Airway began toward the end of 1938. Therefore the statistics for 1939 were the first to include extensive operations of the Trans-Canada Air Lines. This company is in a class by itself in Canadian aviation at present, and its inclusion somewhat distorts comparisons with data of previous years. The long journey and relatively heavy passenger traffic raises the average journey and average passenger per aircraft mile, although the business of other companies may be practically unchanged. The companies operating in the north country carry passengers, freight and supplies into and out of the mines and account for the large volume of freight carried by air in Canada. Because of this feature of civil aviation in Canada, it is difficult to make comparisons with other countries where the traffic is principally inter-urban passenger traffic between well-established airports.

#### 1.—Summary Statistics of Civil Aviation in Canada, 1937-42

NOTE.—Figures for 1921-23 may be found at p. 616 of the 1924 edition of the Year Book, for 1924-29 at p. 661 of the 1930 edition, for 1930-34 at p. 698 of the 1936 edition and for 1935 and 1936 at p. 640 of the 1942 Year Book. Statistics for the Trans-Canada Airway were included for the first time in 1939, and general comparisons of figures after 1938 with previous years are thereby distorted (see text above).

<sup>1</sup> Revised since the publication of the 1942 Year Book.

<sup>2</sup> Compiled upon a different basis from those of the Post Office shown at p. 651.

<sup>3</sup> Figure not available for 1940.

## Subsection 2.—Ground Facilities

Early ground facilities for civil aviation in Canada consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres, and of numerous terminals from which commercial flying services operated, mainly into the northern mining regions. A large air terminal was built at St. Hubert, seven miles south of Montreal, with immigration, customs and postal facilities available. These earlier airports formed the nucleus which, with many additions and improvements, became the chain of aerodromes constituting the Trans-Canada Air Lines. The development of this airway and the use and expansion of the ground facilities for military purposes since the outbreak of war have affected the status and facilities of many former municipal airports.

## Subsection 3.—Aircraft

**The Manufacture of Aircraft.**—The construction in Canada of aircraft and equipment is essential to the development of flying. Before the War several manufacturers were producing original types especially suited to operation in Canada, and a number of manufacturers from England and the United States formed branches in Canada for the assembly and servicing of their products. There were also a number of plants for the manufacture of landing gear, especially skis and pontoons, designed to meet the particular requirements of Canadian conditions. Since the beginning of the War, plants equipped to manufacture civil aircraft and parts have been changed over to the production of military types and the industry has been expanded by many additional plants and firms. A brief description of the war-time manufacture of aircraft in Canada appears at p. 360 of the Manufactures Chapter. Pre-war figures are given at p. 617 of the 1941 edition of the Year Book.

## Section 3.—Finance and Employees

## Subsection 1.—Dominion and Other Revenues and Expenditures

The status of civil aviation in Canada has changed considerably in recent years as regards both civil and military requirements. Until the institution of the Trans-Canada Air Lines, the development of civil aviation was limited to the provision of private, commercial and administrative services for the more remote sections of Canada, chiefly in the northern mining, forestry and trapping regions. Recently, however, the Dominion Government has improved existing airports and constructed others for civil and for military purposes. In addition to direct expenditures, the Department of Transport has given assistance to municipalities for the development of airports, such contributions, as shown in Table 3, probably including expenditures for both capital and operating purposes.

### 3.—Capital and Ordinary Expenditures and Revenues of the Dominion Government in Connection with Civil Aviation, Fiscal Years 1941-43

NOTE.—Compiled from the Annual Reports of the Department of Transport.

Item	1941	1942	1943
<b>Capital Expenditures</b>	<b>\$</b>	<b>\$</b>	<b>\$</b>

Miscellaneous.....	Nil	Nil	Nil
<b>Totals, Revenues.....</b>	<b>56,784</b>	<b>101,667</b>	<b>99,883</b>

The investments in civil aviation as reported for the end of 1941 are shown in Table 4. These do not include the Dominion Government expenditures on airports across Canada included in the Trans-Canada Airway, nor expenditures on military aerodromes, the former being covered in Subsection 1. Complete statistics are not available regarding the investments in airports by municipalities.

No statistics are available regarding expenditures on flying operations by the Dominion and Provincial Governments or by private individuals.

#### 4.—Investments, Revenues and Expenditures in connection with Civil Aviation in Canada, 1941 and 1942

NOTE.—These figures do not cover the entire field of civil aviation: see preceding text.

#### Subsection 2.—Employees and Salaries and Wages

The numbers of civil air personnel licensed in recent years is shown in Table 1, p. 631. However, those figures include pilots and engineers in the employ of the Dominion Government and of private individuals as well as those not employed at all in the ordinary sense, and licensed personnel of these classes are not included in the classes shown in Table 5.

#### 5.—Employees and Salaries and Wages in Civil Aviation in Canada, 1941 and 1942

<sup>1</sup> Includes Trans-Canada Air Lines.

### Section 4.—Aerial Traffic

Table 1, p. 630, shows large increases in 1941 and 1942 in passenger traffic as indicated by the passengers carried one mile. The freight carried by aircraft consists largely of machinery, supplies, etc., for mines in the northern parts of Quebec, Ontario, and the western provinces and in the Northwest Territories. Many of these mines are accessible only by canoe in the summer and dog team in the winter or by aircraft, and aircraft transportation will probably be the cheapest and most effective method of transportation during the life of a large number of them. The amount of freight carried by aircraft grew rapidly, increasing from 2,372,467 lb. in 1931 to a record of 24,317,610 lb. for 1937; it has since decreased to 16,559,611 lb. for 1941 and 12,651,939 for 1942. The decline in air traffic since 1939 has been closely connected with the decline in the gold-mining industry and the restrictions in the use of aircraft for trapping and other operations. In the years before the War a large part of the air freight was mine machinery and supplies to gold-mining companies. Further information regarding air-mail services appears in Part VIII of this Chapter, pp. 650-657.

Some countries include in their statistics traffic between two foreign stations of companies incorporated in the reporting country. In Table 6 statistics of companies operating regular routes between points in Canada and the United States are shown separately. These statistics include only those of traffic between the two countries that originates or terminates in Canada and, therefore, exclude traffic carried by these lines between foreign stations, except a small amount of through traffic flown over Canadian territory, as covered by the footnotes to Table 6. Reported miles flown are those flown over Canadian territory only and the same mileage is used in computing passenger-miles and ton-miles.

### 6.—Operations of Civil Aircraft in Canada, 1941

<sup>1</sup> Includes both revenue and non-revenue traffic and traffic received from other air carriers. <sup>2</sup> Includes 5,383 passengers, 17,852 lb. of freight and 54,994 lb. of mail not distributed between provinces.

## PART VI.—WIRE COMMUNICATIONS\*

## Section 1.—Telegraphs

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

**Dominion Government Telegraph Service.**—This service is operated by the Telegraph Branch of the Department of Public Works. Its general object has been to furnish wire communications for outlying and sparsely settled districts where the amount of business is so small that commercial companies will not enter the field but where the public interests require that there should be communication. Thus these facilities include: telegraph and telephone services to scattered settlements around the coast of Cape Breton Island; cable services to Campobello, Grand Manan, and other islands in the Bay of Fundy, to Prince Edward Island, Magdalen Islands, and Anticosti Island in the Gulf of St. Lawrence; telegraph services along the north shore of the Gulf of St. Lawrence from Quebec to the Straits of Belle Isle; cable connections with Pelce and Manitoulin Islands in Ontario; some lines to northern outlying districts in Saskatchewan; lines from Edmonton to the Athabaska and Peace River country in Alberta; telegraph or telephone communications around the coast of Vancouver Island and to fishing, lumbering and mining settlements along the coast of the mainland of British Columbia, as well as to isolated mining centres in the interior; and finally the overland telegraph line from Ashcroft, B.C., to Dawson and other settlements in Yukon.

**Telegraph Systems.**—The Canadian telegraph systems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world; and are operated under great climatic and geographical disadvantages.

\* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues annual reports dealing with telegraph and telephone statistics.

## 1.—Statistics of All Canadian Telegraphs, 1931-42

NOTE.—Figures for the years 1920-30 will be found at p. 722 of the 1938 Year Book.

<sup>1</sup> Excludes commission operators.

<sup>2</sup> Excludes messages relayed to the United States.

<sup>3</sup> Revised since the publication of the 1942 Year Book.

**Submarine Cables.**—Sixteen transoceanic cables have termini in Canada—fourteen of them on the Atlantic Coast and two on the Pacific. In addition, there are eight cables between Atlantic coastal stations in Canada and the United States. The year in which the cable was first demonstrated to be of commercial value was 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and United States interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and was owned by a partnership of the Governments of Great Britain, New Zealand, Australia and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of 1928, in view of increased wireless competition, it was decided to dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communication Co., a company formed to take over all Empire-owned cables, and lease the Empire-owned beam wireless systems. The necessary legislation was passed by the United Kingdom in February, 1929, and by Canada in June, 1929.

## Section 2.—Telephones

A brief historical account of the early development of telephones in Canada is given at p. 781 of the 1934-35 Year Book.

### Subsection 1.—Systems and Equipment

**Telephone Systems.**—The 3,192 telephone systems existing in 1942 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Department of Public Works and National Parks of Canada, Department of Mines and Resources. They also included 26 municipal systems, the largest operated by the cities of Edmonton, Fort William and Port Arthur. Of the 2,387 co-operative telephone companies no fewer than 1,134 were in Saskatchewan alone, 791 in Alberta and 213 in Nova Scotia. The largest among the 540 stock companies operating telephone systems in 1942 were the Bell Telephone Co., and the British Columbia Telephone Co. Over 59 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Co., and their telephones in Quebec and Ontario constitute 57 p.c. of the total for Canada.

**Telephone Equipment.**—In telephones per 100 population Canada ranked third in 1942 with 13.97, the two leading countries being the United States with 16.56 and Sweden with 14.26.

Of a total of 1,627,775 telephones in Canada, 930,448 or 57 p.c. were operated from automatic switchboards. The remainder were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces.

## 2.—Mileages of Pole Line and Wire, and Telephones in Use, as at Dec. 31, 1931-42

NOTE.—Figures for the years 1911-30 will be found at p. 724 of the 1938 Year Book.

<sup>1</sup> Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.<sup>2</sup> Revised since the publication of the 1942 Year Book.

The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

## 3.—Telephones in Use, by Provinces, as at Dec. 31, 1941 and 1942

## Subsection 2.—Telephone Finances

Important trends for the telephone industry in Canada are indicated in Tables 4 and 5. There were setbacks in revenues, operating expenses, salaries and wages, etc., during the depression years, but these were not so marked as in most other branches of industry.

## 4.—Financial Statistics of Telephones in Canada, 1931-42

<sup>1</sup> Includes salaries and wages chargeable to capital account.

<sup>2</sup> Includes Bell Telephone Co. in Ontario and Quebec.

<sup>3</sup> Financial Statistics of Bell Telephone in Ontario included under Quebec.

<sup>4</sup> Excludes employees and wages for rural systems in Saskatchewan.

### Subsection 3.—Telephone Calls

Systems operating almost 90 p.c. of all telephones in Canada made estimates by actual count on days of normal business and, after adjustment for incompleated calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls in practically all cases were the actual long-distance calls put through or completed.

### 6.—Local and Long-Distance Calls and Averages per Telephone and per Capita, 1936-42

NOTE.—Statistics for 1928-35 are given at p. 718 of the 1939 Year Book.

<sup>2</sup> Revised since

## PART VII—RADIO COMMUNICATIONS

The Canada Year Book, 1942, at p. 650, gives an outline of the development of administrative control over radio communication in Canada and of the legislative enactments by means of which this was effected.

### Section 1.—Administration

#### Subsection 1.—Technical Control and Licensing

All radio stations within the Dominion of Canada are required to be licensed, whether used for transmission or reception, or both. The issuance of all classes of licences, the assignment of call signs and frequencies, and the inspection and monitoring of radio stations in Canada is carried out by the personnel of the Radio Division. There were 73,007 radio stations of all classes inspected by departmental radio inspectors during 1942 and 61,191 during 1943. Examinations for certificates of proficiency in radio are conducted by the inspection staff of the Radio Division. Certificates of all classes to the number of 11,032 were issued up to Mar. 31, 1942, and 11,562 up to Mar. 31, 1943.

The Radio Regulations for ship stations issued under the Canada Shipping Act, 1934, lay down the specifications of radio equipment to be carried on certain classes of vessels, and also designate the qualifications of the operators required.

To ensure safety of life at sea, certain passenger steamers and cargo vessels, by international regulation, must carry radio equipment manned by competent operators holding certificates of proficiency in radio. The Department maintains a complete radio inspection service to enforce this regulation. Inspectors, located at major ports throughout the Dominion, are responsible for checking the efficiency of the radio equipment on ships calling at Canadian ports, regardless of their nationality, and for seeing that only competent operators are carried. Under the Canada Shipping Act, 1934, ships of foreign and Canadian registry, while in Canadian ports, are surveyed with a view to the issuance of safety certificates.

## 1.—Radio Stations in Operation in Canada, by Class, as at Mar. 31, 1939-43

<sup>1</sup> Includes licences issued free, numbering 7,465 in 1943, 6,998 in 1942, 6,796 in 1941, 5,862 in 1940, 4,557 in 1939, 3,155 in 1938 and 2,758 in 1937.

### Subsection 2.—Expenditures and Revenues of Radio Administration

The Department of Transport was organized during the fiscal year 1937, so that 1938 is the earliest year for which complete figures, on the present basis, can be given:

Prior to Apr. 1, 1939, the licence fee for private commercial broadcasting stations was \$50. Since that date, however, the fee has been determined by the power of the station and the density of population within its service radius and varies from \$50 per annum in the case of low-power, short-wave, and non-commercial university stations, to \$10,000 per annum in the case of 50 kw. commercial stations.

### 3.—Expenditures and Revenues of Radio Services, Department of Transport, Fiscal Years 1940-43

<sup>1</sup> Revised since the publication of the 1942 Year Book.  
(c. 24), prescribes as follows:—

<sup>2</sup> The Canadian Broadcasting Act, 1936

"14. (1) The Minister of Finance shall deposit from time to time in the Bank of Canada or in a chartered bank to be designated by him to the credit of the Corporation:—

(a) the moneys received from licence fees in respect of private receiving licences and private station broadcasting licences, after deducting from the gross receipts the cost of collection and administration, such costs being determined by the Minister from time to time."

There are two classes of private receiving licences, one for battery-operated receivers (fee \$2 per annum), and the other for electrically operated receivers (fee \$2.50 per annum). Free licences are issued for crystal receiving sets and to blind persons, schools, hospitals and charitable institutions; also for receiving sets installed in barracks, mess-halls, canteens or recreational rooms for the gratuitous entertainment of members of His Majesty's naval, military or air forces or Allied Forces in Canada or merchant seamen belonging to a manning pool; and sets operated by persons whose names appear on the diplomatic list of the Department of External Affairs and consuls general of career as listed in the Annual Report of the Department of External Affairs.

Exact figures of revenue received from private receiving licences are not available by provinces. This is partly due to the fact that commissions paid for the issuance of licences vary according to the classification in which the issue falls, that is, post office, radio dealer, house-to-house vendor, etc. In Table 4, therefore, total revenue received from the sale of private receiving licences has been estimated according to the number of licences issued in each province.

#### 4.—Revenue from Private Receiving Licences Issued in Canada, by Provinces, Fiscal Years 1937-43

NOTE.—The figures in this table are approximations only.

#### Subsection 3.—Investigation and Suppression of Inductive Interference

As a consequence of the reduction in appropriation and staff, and also the fact that the remaining staff has been largely employed on war work, it has been necessary to reduce materially the interference suppression service.

Twenty-four cars equipped with sensitive apparatus for the investigation of interference to radio reception operate from permanent inspection offices located in 21 cities across the Dominion. The inspectors in charge of these cars interview broadcast listeners who have reported interference, and determine the actual source. Tests are then made to ascertain whether or not the interference can be suppressed effectively and economically. The owners of the interfering apparatus are advised of the results of the tests carried out and are given full information regarding the most effective means of suppressing or eliminating the interference.

On Jan. 1, 1942, restrictions against the operation of interfering electro-medical equipment of the spark type were put into effect under the Regulations for controlling radio interference. Investigations show that the majority of practitioners are now using spark apparatus for surgery only and that the interference from sources of this type is almost negligible.

The Radio Division co-operates with the Canadian Engineering Standards Association in drafting specifications for Part IV of the C.E. Code on radio interference, and, since the outbreak of war, the Headquarters Staff has continued to work closely with the Department of National Defence, the Inspection Board of the United Kingdom and Canada, and the Royal Canadian Air Force on problems of interference in army vehicles and aircraft. Many special types of interference suppressors are developed and have proven superior to those previously used.

## Section 2.—Operation of Radio Communications

## Subsection 1.—Dominion Government Radio Stations

**Department of Transport, Marine Service.**—Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic Coast; Hudson Bay, Strait, and sub-Arctic; and Pacific Coast. The first three networks are interlocking. The Department of Transport maintains communication between Ottawa and the east and west coasts, and Hudson Bay and Strait by means of high-frequency stations.

During the fiscal year 1942, Government radiotelegraph stations on the east coast, west coast, the Great Lakes, and Hudson Bay and Strait handled 365,839 messages or 9,022,096 words, compared with 354,380 messages or 8,278,512 words handled during 1939-40, and the cost of maintenance was \$626,796 compared with \$597,207 in the previous year. During the fiscal year 1943, 423,393 messages or 12,688,642 words were handled and the cost of maintenance was \$664,370. A table at p. 655 of the 1942 Year Book shows the areas served, the location of the stations and the type of service performed by these networks.

**Department of Transport, Aeronautical Service.**—The radio services provided for aviation may be divided into two categories: first, those furnished on behalf of aircraft flying trans-Canada routes; and secondly, those intended for aircraft flying transatlantic routes. This phase of radio in Canada is being rapidly developed. Aviation radio range stations now extend from coast to coast providing aid to air navigation for the Government-owned Trans-Canada Air Lines as well as for any other aircraft flying such routes. A table at p. 656 of the 1942 Year Book shows the routes served, the location of the stations and the type of service provided by these stations as at Mar. 31, 1941.

**Department of National Defence.**—The Royal Canadian Corps of Signals operates, in addition to stations established for military purposes, 11 permanent stations and 2 summer stations situated along the Mackenzie River and in Yukon on behalf of the Bureau of Northwest Territories and Yukon Affairs, Department of Mines and Resources.

**Department of Public Works.**—Eleven stations are operated to provide emergency communication between the mainland and certain islands, and 9 stations to provide emergency links in existing landline circuits.

**Department of Mines and Resources.**—This Department operates one private commercial station and one experimental station at the Dominion Observatory for the transmission of time signals, and 22 private commercial stations in the National Parks of Canada, together with 18 portable and fixed private commercial stations.

### Subsection 2.—Provincial Government Radio Stations

Provincial Governments operate radio stations as follows: New Brunswick, 2; Quebec, 11; Ontario, 202; Manitoba, 26; Saskatchewan, 47; Alberta, 103; and British Columbia, 251 (including 35 operated by the British Columbia Provincial Police).

**Police Radio Services.**—The British Columbia Provincial Police Department operates 35 radio stations to provide communication between police headquarters and the various units of the force. The Municipal Police Departments of the following cities also operate radio stations for the same purpose: Halifax and Sydney, N.S.; Charlottetown, P.E.I.; Moncton and Saint John, N.B.; Granby, Lachine, La Tuque, Montreal,\* Quebec, St. Hyacinthe, St. Johns, Sherbrooke, Valleyfield, Verdun and Westmount, Que.; Belleville, Brantford, Brockville, Chatham, Cornwall, Etobicoke, Forest Hill Village, Hamilton,\* Kingston, Kirkland Lake, Kitchener,\* London, Mimico, Niagara Falls, Oshawa, Ottawa,\* Peterborough, Port Arthur, Sudbury, Toronto,\* Trenton and Windsor,\* Ont.; Brandon and Winnipeg,\* Man.; Regina and Saskatoon, Sask.; Calgary and Edmonton, Alta.; New Westminster, Tadanac, Vancouver and Victoria,\* B.C.

### Subsection 3.—Privately Owned Commercial Stations

From Table 1 it will be noted that there were 6 limited coast stations, 85 public commercial stations, and 1,292 private commercial stations in operation in the Dominion at Mar. 31, 1943. A public commercial station situated at Drummondville, Que., provides transoceanic radiotelegraph and radio telephone services to Great Britain and Australia, and a radiotelephone service to Newfoundland. These stations are similar in one respect, in that they are owned and operated by private individuals or companies incorporated under the laws of the Dominion, or of one of the provinces.

The limited coast stations are, as a rule, privately owned and provide a ship-to-shore communication service with ships owned or operated by the licensees only. Two such stations are, however, owned and operated by the Canadian Marconi Company, one situated at Louisburg, N.S., providing a long-range radiotelegraph service to ships at sea and the other situated at Drummondville, Que., providing a long-range radiotelephone service to ships at sea. The facilities of these two stations are open to the general public. The services performed by commercial stations, both public and private, are many and varied. Generally speaking, these stations are located in areas not served by telephone, telegraph, or other means of telecommunication. The majority perform point-to-point radiotelegraph or radiotelephone service, although an increasing number are being utilized for ground-to-plane communication. These stations provide an invaluable means of contact with mining camps, lumber mills, exploration and survey parties, trading posts, and many points that would otherwise be cut off from the more settled parts of the Dominion.

Private commercial stations may be used only for the handling of messages relative to the private business of the licensee, whereas public commercial stations may be used for the handling of messages for the general public.

\* Also serves adjacent municipalities.

### **Section 3.—Program Broadcasting and Regulation under the Canadian Broadcasting Corporation\***

#### **Subsection 1.—Administration of the Canadian Broadcasting Corporation**

The Canadian Broadcasting Corporation succeeded the Canadian Radio Broadcasting Commission on Nov. 2, 1936. This—the first nationally owned and controlled broadcasting corporation in North America—has done much to further its aim of providing as complete a service as possible to residents of every part of Canada. The Corporation operates under the Canadian Broadcasting Act, 1936, which provides that the Corporation shall consist of a Board of nine Governors chosen to give representation to the principal geographical divisions of Canada. In practice, the Board of Governors determines and supervises policy, but actual administration and operations are under the direction of the General Manager. The by-laws of the Corporation approved by the Governor in Council provide a formula for general administration. The administrative organization of the CBC consists of the following divisions: Executive, Secretariat, Finance, Engineering, Program, Press and Information, Commercial, and Station Relations.

Under the Canadian Broadcasting Act the CBC is charged with the responsibility of formulating regulations controlling the establishment and operation of networks, the character of any and all programs broadcast in Canada and the proportion of time that may be devoted to advertising in broadcast programs. The CBC's regulations were drawn up to ensure a certain standard in all broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship on any matter broadcast on the air. The responsibility of seeing that the regulations are observed rests with the station management.

#### **Subsection 2.—Operations**

**Broadcasting Facilities.**—Under Sect. 24 of the Act, the CBC is required to review all applications for licences for new stations as well as applications for increases in power and changes in frequency or changes in location. Under these provisions the licensing of extensions in broadcasting facilities involves two considerations: the first is non-interference with the present and proposed facilities of the CBC; and the second is that high-power transmission facilities, on both long- and short-wave bands, are reserved for use by the CBC. Within these limitations it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

The CBC national network is made up of 10 CBC-owned stations, 26 privately owned affiliated stations, and 30 privately owned supplementary stations. The total power of CBC stations, which includes four 50,000-watt transmitters, is 214,000 watts and of the privately owned network stations, 67,150. In the achievement of the extensive coverage of the CBC network, designed to be as effective to the entire Dominion as possible, the needs of the rural population are considered as well as those of the urban population. Quebec Province is equipped with both French and English outlets.

Subsidiary hookup broadcasting is controlled by the CBC, and all hookups must have the authorization of the Corporation. Contractual arrangements with stations for commercial hookups are handled by the Corporation's Commercial Department.

\* Revised under the direction of the General Manager, Canadian Broadcasting Corporation.

## 6.—Broadcasting Stations of the CBC National Network, as at Mar. 31, 1943

Note.—Owned or leased stations are marked with a dagger (†) and affiliated stations, on which certain hours are reserved for CBC programs, by an asterisk (\*). For the remaining stations the use of CBC programs is optional.

<sup>1</sup> Daytime power—500 watts only at night.

<sup>2</sup> Daytime power—100 watts only at night.

**Program Service and Development.**—In November, 1936, the CBC network served less than 50 p.c. of the population; by August, 1940, the service had been extended to over 90 p.c. of the total urban and rural population. During the period 1936–42 the number of hours of network broadcasting increased from 44½ per week to 133½ per week. Thus, during these six years, nearly twice the number of listeners were brought within range of the CBC national programs, and these programs were more than doubled in duration.

News broadcasts and programs with special reference to the War occupy a considerable portion of national and regional network time. At the same time, care is taken to provide well-balanced programs with music and variety amounting to about 50 p.c. of the total. News, drama, talks, actuality broadcasts, children's programs, religious programs, public service broadcasts, sports, women's activities, etc., form the remainder of the broadcast schedule. Of the spoken-word programs in a representative month, 2,565 covering 769 hours, or 69.6 p.c. of the time allotted to this type of program, were broadcast by live talent, 826, covering 256 hours, were recorded programs and 212, covering 80 hours, were transcribed. The two latter methods of broadcasting accounted for 23.2 p.c. and 7.2 p.c., respectively, of the hours given to spoken-word programs. An important development since the

outbreak of war has been the increase in the number of overseas broadcasts. These are picked up at the CBC short-wave receiving station at Ottawa and re-broadcast from there or recorded for later inclusion at more suitable times.

Material on the use of radio in the public schools appears on pp. 878-879 of the 1942 Year Book.

#### 7.—Classification of CBC Programs for a Representative Month (November, 1942)

#### Subsection 3.—Finances

The Corporation's income for the year ended Mar. 31, 1943, totalling approximately \$5,000,000, showed a satisfactory increase of about \$400,000 over the previous year. Expenditures on operation and on capital account remained well within budget estimates. The \$503,399 outstanding on loans from the Dominion Government at Mar. 31, 1942, was paid off in full during the year. It may be said that the whole of this amount was a prepayment. The Corporation's cash position continues to be most satisfactory.

## 8.—Income and Expenditures of the CBC, Fiscal Years 1941-43

## PART VIII.—THE POST OFFICE\*

The Post Office Department, in addition to the several administrative branches at Ottawa, is divided into fifteen districts each in charge of a District Director or Superintendent of Postal Service. The territory it serves is more extensive in area than that of any other country save the U.S.S.R. or the United States, with a relatively small population compared with the vast area served. Its railway mail service is one of the largest in the world—the rural mail delivery service operates over 4,000 rural mail routes—and in its air-mail system it has answered the problem of supplying a widely scattered population with postal service in the shortest possible time.

A brief account of the development of postal services in Canada is given at pp. 789-790 of the 1934-35 Year Book.

**Mail Transportation.**—The conveyance of mail by land, water, and air entailed a total expenditure of \$20,962,035 during the fiscal year ended 1943. Railway carriage cost \$7,616,506, land transportation \$7,120,400, conveyance by steamship \$1,919,797, and conveyance by air \$4,305,332. These amounts were paid solely for services rendered as carriers. Special subsidies are granted to assure the maintenance of certain steamship services. Since these subsidized services provide transportation for passengers and freight as well as mail, the subsidies are included with other expenditures on water transportation at pp. 619-620.

**Air Mail.**—To-day, with the emphasis on speed in war production, the Trans-Canada Air Mail System—now operating twice daily each way from the Atlantic to the Pacific—some 3,300 miles, is proving an invaluable asset, and air-mail volume continues to expand. Over the main Trans-Canada route in the last month of the fiscal year 1942-43, 278,593 lb. of air mail was carried. Swift connections are made to the United States and other air-mail networks of the world.

\* Revised by B. J. Farrell, Acting Director, Public Relations Branch, Post Office Department.

The Post Office Department is constantly alert to meet the postal needs and at all times endeavours to effect schedule changes, increased frequencies of service, and extensions of facilities to serve the Canadian public. The fiscal year 1942-43 saw the introduction of direct air-mail service from Montreal to Quebec, Bagotville (Shipshaw), Labrador, Cape Breton and Newfoundland. Thirty-nine hundred miles of air route now reach from St. John's, Newfoundland, to Victoria, B.C. Greater frequency of service was given the Mackenzie River and Alaska Highway areas to serve increased activity and air mail has been supplementing steamship service at various points on the Gulf of St. Lawrence.

The growing "air-mindedness" of Canadian citizens is reflected in the expanding use of Canada's air-mail services:—

	<i>Mail Carried by Air</i>	<i>Miles Flown</i>
	lb.	No.
1938-39.....	1,822,399	3,711,987
1939-40.....	2,351,172	5,769,257
1940-41.....	2,842,367	8,330,121
1941-42.....	3,541,625	10,021,579
1942-43.....	5,373,021	10,799,670

**The Post Office in War-Time.**—Although not listed as a war-time Department, the Canadian Post Office holds a key position in the national war effort, not only in maintaining ordinary postal services under extremely difficult conditions, but in the field of the military mails and in its co-operation with other Government Departments. Because of the nature of its service, it is filling an indispensable role in the maintenance of the morale both of civilians in this country and of the Armed Forces here and abroad, to whom "letters from home" are of utmost importance.

War-time conditions have brought a continuing and enormous expansion of postal business of all kinds as war industry, the Government and the private citizen are utilizing postal facilities as never before. This is revealed in the gross postal revenues that have increased annually from \$42,896,179 in 1938-39 to \$59,175,140 in the fiscal year 1942-43. Coupled with this great increase in business the Post Office Department has been faced with the depletion of postal staff due to enlistments; this necessitated the use of inexperienced help and of women to fill the gaps. The problem of obtaining adequate transportation facilities for the mails has also been acute.

In liaison with other Government Departments, the Post Office Department has undertaken many special activities and is Canada's leading agency for selling war savings stamps and certificates through its post offices. The value of war savings stamps thus sold was \$11,389,499 in the fiscal year 1941-42 and millions of dollars worth of war savings certificates were sold and delivered to purchasers by the Postal Service. In the distribution end millions of forms, pledges, etc., have been delivered to householders in Canada and to all business firms.

Also handled through the 12,313 Canadian post offices are the sale of unemployment insurance stamps, the distribution of income tax forms, ration books, gasoline ration forms, etc.; the National Registration, the registration of enemy aliens, registration for military service, registration of nurses, the registration of women, etc. Co-operation is given in foreign exchange examination work.

*Military Mails.*—The Canadian Postal Corps was originally recruited from executives and personnel of the Canadian Post Office in 1939 and is serving all branches of the Armed Forces. The Base Post Office in the fiscal year 1942-43, despatched overseas the record volume of over 21,800,000 lb. of parcels, 534,000 lb. of letters and 1,597,000 lb. of news to the Fighting Services.

Members of the Armed Forces, including Auxiliary Services, overseas have been allowed free mailing on letters to Canada, special reduced rates have been granted on gift-parcels mailed to the Forces abroad (limit 11 lb.). Postal money remittances to them have been facilitated and a special method of handling to safeguard tobacco parcels has been introduced.

New facilities have been established to expedite correspondence to the Armed Forces. The Airgraph system—the letters on film that travel by air—is providing a fast and space-conserving method of communication. Airgraph messages are processed on rolls of micro-film that are flown to Britain, enlarged and delivered. Since this service was established, rates have been reduced for the benefit of the Armed Forces, and facilities extended to facilitate inter-civilian correspondence. Airgraph is now on a two-way basis between the United Kingdom and Canada.

The Armed Forces Air Letter—a combined blue lightweight letter and envelope—operating at the low postage rate of 10 cents, for corresponding with the Armed Forces overseas, is also proving a popular medium for speedy air correspondence.

Special arrangements are in effect for communication with prisoners of war, persons interned abroad, and civilians in enemy-occupied countries. "Air Letter Cards" and "Personal Postal Messages" may be obtained at any post office.

Free postage is allowed ordinary letters, postcards and parcels to prisoners of war and interned persons, air mail, however, being prepaid at rates applicable.

1935.....	31,248,324	28,974,316	+2,274,008				

<sup>1</sup> Exclusive of commissions and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1937 was \$41,181,566; in 1938, \$42,998,349; in 1939, \$42,896,178; in 1940, \$44,208,369; in 1941, \$48,143,410; in 1942, \$55,477,159; and in 1943, \$59,175,138.

**Postage.**—The net revenue receipts shown in Table 3 are received mainly in the form of postage. This is indicated by the following gross figures:—

The gross value of the postage stamps, post cards, etc., sold during each of the latest nine fiscal years, was: \$26,303,451 in 1935, \$27,341,608 in 1936, \$28,179,323 in 1937, \$28,808,513 in 1938, \$28,836,457 in 1939, \$29,530,247 in 1940, \$31,425,593 in 1941, \$35,716,908 in 1942 and \$38,959,795 in 1943. Receipts from postage paid in cash were as follows: \$8,619,712 in 1935, \$9,277,072 in 1936, \$10,203,389 in 1937, \$10,865,895 in 1938, \$11,065,527 in 1939, \$11,792,311 in 1940, \$13,459,526 in 1941, \$15,777,816 in 1942 and \$16,057,366 in 1943.

**Auxiliary Services.**—The auxiliary postal services include the issuing of money orders (including postal notes) and the facilities offered by the Post Office Savings Bank. In 1868, there were 515 money-order offices in operation, issuing orders to an amount of \$3,342,574; the following tables show the magnitude of operations in recent years. Statistical tables showing deposits with the Government Savings Banks and the business of the Post Office Savings Bank are included in the chapter on Currency and Banking (Chapter XXIV).

**4.—Operations of the Money-Order System in Canada, Fiscal Years 1937-43**

NOTE.—For figures for 1868-1900, see the 1911 Year Book, p. 289; for 1901-31, see the 1932 Year Book, p. 622 and for 1932-36, p. 666 of the 1942 edition.

## PART IX.—THE PRESS

An article on the development of the press in Canada is given at pp. 737-758 of the 1939 Year Book.

The Dominion Bureau of Statistics does not collect statistics regarding the circulation of newspapers and periodicals in Canada and the following tables have been compiled from data taken from *McKim's Directory of Canadian Publications*.

A table at p. 669 of the 1942 Year Book enumerates the periodical publications in Canada by frequency of issue. In 1941 there were 107 daily, 7 tri-weekly, 24 semi-weekly, 953 weekly, 60 bi-weekly or semi-monthly, 482 monthly, 97 bi-monthly or quarterly and 81 miscellaneous publications, a total of 1,811. Only those publications for which circulation figures are available are included in Tables 1 and 2, for that reason the figures shown therein may differ from those given in the above summary. As the publication of *McKim's Directory* has been suspended for the duration of the War, no later figures are available. Comparison of the figures of Table 2 showing publications in cities of 20,000 population or over, with those for the same year of Table 1, showing publications for the whole of Canada, indicates that the daily newspapers are confined almost entirely to these larger urban communities, but that, in the field of weekly publications, while the greater part of the circulation is accounted for by the publications of these cities, by far the greatest number of weeklies are issued in smaller communities. The weekly seems to be the standard medium for local news in small towns and villages.

The French weekly press in particular is a strong influence in Quebec. The urban section is, of course, centred at Montreal. The rural weekly press in this Province stands close comparison with that of the rest of the country; its evolution has been parallel to that of the English rural press, with the difference that its field has been more limited. Most of the French rural weeklies, if small as measured by circulation, are old institutions, many of them having passed the half-century mark. As in the case of the English weekly press, the development of local job printing, especially commercial advertising, has been a strong influence in the survival of many of the smaller rural weeklies.

### 1.—Circulations<sup>1</sup> of Daily, Semi-Weekly and Weekly Publications in Canada, 1934-41, with Details by Provinces, 1941

NOTE.—Figures for circulation are given to the nearest thousand as some publications are not exactly reported. Compiled from *McKim's Directory of Canadian Publications*; only those papers for which circulation figures are there given are included. Figures for 1921-33 are given at p. 670 of the 1942 Year Book. As the publication of *McKim's Directory* has been suspended for the duration of the War, no later figures than those shown are available.

<sup>1</sup> For newspapers—averages for 12 months ended Sept. 30; for periodicals—averages for 6 months ended Dec. 31. <sup>2</sup> Includes the sum of morning and evening editions of the same newspaper. Also includes papers issued five times a week. <sup>3</sup> Includes papers published two, three or four times a week. <sup>4</sup> Includes special Saturday and Sunday editions of daily papers.

**Publications in the French Language.**—Such publications include a comparatively large proportion of periodicals dealing with literature, music, religion, and similar cultural subjects, and the circulations of many of these periodicals are not reported in *McKim's Directory of Canadian Publications*. Publications for which the circulations are not reported are not included in either the numbers or circulations given in Table 3. Since the majority of such unreported publications are likely to have fairly small circulations, the figures of the table represent a larger proportion of total circulation than of the total number of publications. Among daily newspapers, there is only one small publication unreported in each year.

### 3.—Circulations of French Language Publications in Canada, by Provinces, 1940 and 1941

NOTE.—Figures of circulation are given to the nearest thousand as some publications are not exactly reported. Bilingual publications are included. Compiled from *McKim's Directory of Canadian Publications*. As the publication of this Directory has been suspended for the duration of the War, no later figures than those shown are available.

SECTION 4. GOVERNMENT ANNUITIES	672		

One of the most apt descriptions of the relationship of social security and social service to the national welfare was expressed in the following words by the Prime Minister, the Rt. Hon. W. L. Mackenzie King, on Mar. 3, 1943, in the House of Commons, during discussion of the Resolution concerning Social Security.

"May I interject that any system of social security . . . is, or ought to be, in the nature of social service; that industry is not merely a means whereby capitalists may increase profits, or workers find the means of gaining a livelihood through wages; but that there exists also the right of the community, which makes possible the carrying on of industry, to expect to have the interest and well-being of the community and its members considered in the rewards of industry. In other words, industry exists to serve a social end, as well as to serve the needs of individuals . . . .

"... it is only by the implied expressed permission of the State that the institution of private property can exist. The justification of private property lies in the fact that . . . the good of the greatest number will be best served. But if as a result of the institution of private property, whether it be the ownership of land or of capital, a social condition may develop which is inimical to the community as a whole, that institution has either to be modified in some particulars, controlled in some directions, or make way for some other system."

## PART I.—PROVINCIAL AND DOMINION WELFARE SERVICES

### INTRODUCTION

From a historical as well as constitutional point of view, the responsibility for social welfare in Canada has rested on the provinces, which, in turn, have delegated a large share of this responsibility to the municipalities. It is but recently, relatively speaking, that the concept of public welfare has grown to include more than poor relief, sanitation and institutions of confinement and that the provinces have undertaken to meet these expanding needs by maintaining institutions of one kind or another, child welfare services, and other specialized programs. Thus the provinces

\* The material in Part I is based on information and statistics obtained from the Dominion and Provincial authorities responsible for the administration of the various welfare services. In planning the entire chapter, the Editor has received valuable assistance from George F. Davidson, M.A., Ph. D., Executive Director, Canadian Welfare Council, Ottawa.

themselves have latterly assumed the major role in public welfare and, even though the municipalities have continued to carry substantial burdens, the Provincial Governments have taken a direct part in co-ordinating the work and assisting by subsidies and other means. At the same time, an increasing measure of responsibility on the part of the Dominion has been in evidence: this was especially noticeable, during the pre-war depression decade, in the fields of unemployment relief, agricultural relief and old age pensions. While constitutional authority has not changed, except with respect to unemployment insurance, the pressure of events in the depression decade obliged the Dominion Government to help the provinces to shoulder their financial burdens by grants-in-aid, etc. To-day, therefore, the responsibility of the Dominion Government for problems arising in these fields has become fairly well established by custom rather than constitutional change, although what remained of unemployment relief after the introduction of unemployment insurance was turned back in 1941 to the provinces. A real effort was made by the Rowell-Sirois Commission (see the *Canada Year Book* 1940, pp. 1157-1163) to bring about the necessary redistribution of administrative and financial responsibility essential to the proper functioning of the Dominion and Provincial authorities in the complicated economic circumstances that are an outgrowth of the present century. This effort has still to be carried forward to a conclusion and, meantime, some degree of constitutional friction and difficulty is perhaps unavoidable.

Historically, welfare work begins with the care of the most needy and the care of the indigent, aged and infirm, homeless orphans, dependent, neglected and delinquent children, and the dependent deaf and blind. These classes have been recognized as a public responsibility since the earliest days, but the actual work of caring for them was, in great degree, undertaken by religious and philanthropic bodies, of which many were incorporated during the latter part of the nineteenth century. In many cases, government aid was granted, with official inspection as the natural corollary. As early as 1752 an orphanage was opened at Halifax, N.S., for orphans and deserted children and in Upper Canada an Act was passed in 1779 to provide for the education and support of orphan children. In the different colonies before Confederation, under various Acts of the Legislatures, houses of refuge, homes for the aged, orphanages and other charitable institutions were provided. The most serious welfare problems, particularly in Upper and Lower Canada, were those connected with immigration. Many immigrants were destitute on their arrival and were dependent on charity. In 1822, an immigrant hospital was opened at Quebec for the care of the indigent sick. Throughout the colonies before Confederation an interest in child welfare found expression in the incorporation of numerous institutions for friendless orphans and physically incapacitated children. These orphanages were largely supported by the philanthropy of societies or individuals, and, if grants of public money were received, the management was subject to government supervision. During this period, the orphanage was all that was available to the child who lacked normal home care.

Since Confederation, the principle has become generally recognized that the indigent, aged and infirm, orphans, dependent and neglected children, the deaf and dumb and the blind should be the responsibility of the State. Numerous Acts of the Provincial Legislatures have recognized municipal and provincial responsibility for these classes of the population by establishing institutions, welfare services, or other provisions for their care. In every province of Canada, public welfare organizations now exist to look after their protection and well-being. Child-welfare work as it is known to-day was not recognized as a special field for case work until toward the close of the nineteenth century. Now, noteworthy contributions are

being made in this field by the Departments of Child Welfare of the Provincial Governments, the Children's Aid Societies, Juvenile Immigration Societies and Day Nurseries. Even to-day, although government inspection is now universal, much of this work is carried on by other than official agencies. Of the 468 institutions that reported at the census of 1941, 76 are controlled by provincial and county governments, 61 by municipalities, 104 are under private auspices and 227 are under religious and fraternal organizations.

The field of welfare work is a very wide one and includes the work of many organizations. The Canadian Welfare Council gives national direction to, and co-ordinates the work of, the local welfare agencies; and specialized organizations such as the Canadian National Institute for the Blind, and Canadian Federation of the Blind occupy a somewhat similar role in their particular fields. The various Community Chest organizations and service clubs assist welfare work by helping to finance local organizations, and the great work of the Young Men's Christian Association, the Young Women's Christian Association, the Catholic Youth Organization and the Young Men's Hebrew Association, the Boy Scouts, Girl Guides and similar youth organizations in what may be described as preventive, rather than curative, work cannot be overlooked. Day nurseries have proved of increased value under war-time conditions, enabling many mothers to play their part in increasing Canada's output of war material. Most of the activities of these organizations are not susceptible to statistical measurement. In the case of the Canadian Red Cross, the Victorian Order of Nurses, and the St. John Ambulance Association, their fields of effort are more closely related to public health and are therefore treated in Chapter XXVII.

An outline of the welfare work being carried on by each of the Provincial Governments and by the Dominion Government follows. Details and statistics under each heading are later presented.

## OUTLINES OF WELFARE WORK AT PRESENT BEING CARRIED OUT BY THE DOMINION AND EACH OF THE PROVINCES

### The Dominion

As pointed out at p. 662 general relief and public welfare in Canada remained with the provinces until relatively recent times.

The earliest entry of the central government into the sphere of welfare work was coincident with the earliest days of British rule, the welfare of the Indian inhabitants as accepted wards of the Government having been at first the concern of the military authorities and, after 1845, of the central civil government. Statistics regarding the administration of Indian and Eskimo affairs are given in the Miscellaneous Administration Chapter of this volume. The Dominion Government extended its responsibilities in this field after the First World War, when it was found necessary to supplement the earlier schemes of re-settlement, limited to land grants or scrip in lieu thereof, by the establishment of a Department of Soldiers' Civil Re-establishment, which looked after the general welfare of ex-servicemen and fitted them into the general economic scheme. With the general ageing of the ex-servicemen and the outbreak of the Second World War, the purely welfare services have been developed as outlined in the succeeding paragraphs. Again, the severe depression in the early 'thirties, with the consequent drain upon the financial resources of the provinces and municipalities, forced the Dominion Government into the relief field (see the Labour Chapter of this and earlier volumes) and finally led to the establishment of a nation-wide plan of unemployment insurance.

*Veterans' Allowances.*—In addition to war pensions, allowances are paid to certain non-pensionable veterans at 60 years of age, or earlier if the veteran is permanently unemployable, or eligible veterans who, having served in a theatre of actual war, are incapable and unlikely to become capable of maintaining themselves because of economic handicaps combined with disabilities.

*Dependents' Allowances.*—The Dependents' Allowance Board is charged with the payment of allowances to dependants of members of the Armed Forces, the main purpose of which is to promote the well-being and efficiency of His Majesty's Forces by relieving financial anxieties with respect to the domestic welfare of their dependants.

The Board consists of a civilian chairman and representatives from the three Armed Services and the Treasury and administers all allowances. Where investigation is necessary, it is carried out through the field staffs of the Department of Pensions and National Health, the Soldiers Settlement Board, provincial welfare services, and private welfare organizations such as Children's Aid Societies and Family Welfare Bureaus.

A special Family Welfare Section has been instituted by the Board to administer allowances when the recipient is infirm or where domestic difficulties necessitate the intervention of a third party. In some cases the serviceman's wife may request administration of her allowance in case of illness or of her financial affairs becoming involved. The Section maintains the closest co-operation with the various welfare agencies.

*Supplementary Grants Fund.*—A Dependents' Board of Trustees has been set up to administer this fund, which is designed to give supplementary assistance in special cases of difficulty and hardship where it can be shown that the regular allowances are inadequate. The Board operates with the assistance of Regional Dependents' Advisory Committees that have been established in the chief cities of the Dominion.

*Veterans' Unemployment Assistance.*—The activities of the Welfare Division of the Department of Pensions and National Health are outlined in the Post-War Reconstruction and Rehabilitation Chapter of this volume.

*Unemployment Insurance.*—In 1940, by an amendment to the British North America Act, the Dominion Government was given complete jurisdiction in the field of unemployment insurance and since that time a national system of unemployment insurance administered by the Unemployment Insurance Commission has been in operation. (See Labour Chapter pp. 712-714.)

*Government Annuities.*—For thirty-five years the Dominion Government has carried on a service that permits and encourages Canadians, during the earning period of their lives, to make provision for their old age. The necessary legislation was passed in 1908 as the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33, 1931). This Act is now administered by the Minister of Labour, and provides that any person resident or domiciled in Canada may purchase an annuity from the Government of Canada. (For statistics of annuities, see pp. 673-674.)

**The Dominion Government in Co-operation with the Provinces.**—Each of the provinces as indicated below has adopted the Dominion Old Age Pension Act which has been extended to cover the needy blind. Statistics for all provinces are given at pp. 671-672.

## The Provinces

**Prince Edward Island.**—The welfare services operated by the Province include:\*

- (1) Children's Protective Service
- (2) Home for the Aged

The Province maintains two institutions for orphans and destitute children, one Protestant and one Roman Catholic, together with two Children's Aid Societies. The Provincial Infirmary for the Aged is operated in connection with the Provincial Hospital for the Insane; many of the inmates of the Infirmary are old age pensioners and their pensions help to finance the cost of maintenance, but there are many inmates under 70 years of age whose care is a provincial liability.

*Old Age Pensions.*—The Province has co-operated in the Dominion-Provincial old age pension plan since July 1, 1933.

There is no system of *workmen's compensation* or *mothers' allowances* in the Province, but persons employed under the Dominion Government are provided for under the schedules of the New Brunswick Workmen's Compensation Act.

**Nova Scotia.**—The welfare services operated by the Province include:\*

- (1) Children's Protective Services
- (2) Psychiatric Service
- (3) Training School for Mentally Defective Children
- (4) Mothers' Allowances

The Children's Protective Service includes 6 juvenile courts, probation officers, aid to and supervision of 12 Children's Aid Societies, 10 homes or shelters and 4 reformatory institutions. Practically all children in homes and shelters are wards of the Children's Aid Societies. By far the larger percentage of these wards are in foster homes. Maintenance is paid on a 40-60 p.c. basis between the Province and the municipalities. Financial provision for the maintenance of children in reformatory institutions is at the rate of \$175 per annum from the municipality and an equal amount from the Province. For children in the Training School for the Mentally Defective, the municipality pays \$200 per child per annum, all other expenses being borne by the Province.

*The Mothers' Allowances Act* was passed in 1930 and became effective on Oct. 1 of that year. Statistics of operations under the Act are given at p. 675.

*Homes for the Aged.*—These are operated by municipal, religious or private bodies; they are subject to provincial inspection and, in many cases, receive provincial grants. Many of the municipal or county homes are operated in conjunction with the county asylums.

*Workmen's Compensation.*—The Workmen's Compensation Act was passed in 1915, but did not come into operation until Jan. 1, 1917. The subject of workmen's compensation is not as directly related to welfare as the other services dealt with. The Province in its control of trade and industry enacts compensation legislation and supervises its administration, but workmen's compensation is financed by and is essentially the responsibility of industry. See also pp. 723-725.

\* See also material concerning pensions for the aged and the blind at pp. 670-672.

**New Brunswick.**—The welfare services provided by the Government of New Brunswick consist of:\*

(1) Children's Protective Service

(2) Mothers' Allowances

The administration of the Children's Protection Act has been transferred from the Attorney-General's Department to the Department of Health. As a result a Child Welfare Officer has been appointed. This appointment has given rise to a renewed interest in Children's Aid Societies and nearly all counties are now in course of organizing active societies. Orphanages are under the auspices of religious or private bodies, but there are certain municipal institutions that receive both adults and children. These are all subject to provincial inspection.

*Mothers' Allowances.*—The Act passed in 1930 did not become effective until Aug. 16, 1943.

*Homes for the Aged.*—These are operated under municipal, religious, fraternal or private auspices and are subject to provincial inspection.

*Workmen's Compensation.*—The Workmen's Compensation Act was passed in 1918 and came into force on Jan. 2, 1919. See also pp. 723-725.

**Quebec.**\*—The Quebec Department of Health and Public Welfare administers a comprehensive plan of social welfare, including aid to, and the supervision of, the numerous welfare institutions operated by religious orders or private charity. In Quebec the administrative policy of welfare services is somewhat different to that of other provinces in that the responsibilities ordinarily assumed by the public authorities are in many cases delegated to recognized religious and private welfare agencies, with substantial grants from public funds. The Provincial Relief Act provides for State assistance while avoiding undue interference with the ordinary life of the family.

A noteworthy feature in the line of preventive work is that carried out by the Family Registry Office, whereby children from tubercular families, who have not been infected but of whose infection there is reason to be apprehensive, are boarded out with rural families. The Office works in conjunction with local ministers and doctors, as regards the moral and physical supervision of these children.

Another aspect in the welfare program in this Province is the well-organized colonization scheme, whereby needy families are settled on the land in newly opened districts, and are supervised and granted financial aid until they become self-supporting.

*Mothers' Allowances.*—The Needy Mothers' Assistance Act, 1937, became effective in December, 1938. For statistics of operations under the Act, see p. 675.

*Workmen's Compensation.*—The Quebec Workmen's Compensation Commission was established in 1928 by authority of cc. 79 and 80 of the Statutes of that year. The Act was brought into force by proclamation on Mar. 22, 1928, operations of the Commission commencing as of Sept. 1, 1928. Under this Act, the Quebec Commission did not insure employers against their liability. On Apr. 4, 1931, a new Act (21 Geo. V, c. 100), effective Sept. 1, 1931, provided for such insurance, along practically the same lines as the Workmen's Compensation Act of Ontario. See also pp. 723-725.

\* See also material concerning pensions for the aged and the blind at pp. 670-672.

**Ontario.**—The Department of Public Welfare administers the following forms of assistance:\*

*Mothers' Allowances.*—Since 1920 allowances have been paid by the Province to widows and other necessitous mothers. In addition to basic allowances, free medical services including drugs are provided as well as a 20 p.c. cost-of-living bonus.

*Homes for the Aged.*—Homes for the Aged are incorporated under the Houses of Refuge, the Houses of Refuge in Districts, and the Charitable Institutions Acts, and operated by cities, counties, districts, and religious or benevolent societies under Provincial supervision.

*Unemployment Relief.*—The Unemployment Relief Act of Ontario authorizes contribution on the part of the Department of Public Welfare toward alleviation of distress of unemployable persons. The municipalities of the Province are reimbursed 50 p.c. of the expenditures, while in the unorganized areas the Province administers and pays the total cost of aid rendered.

*Children's Aid Branch.*—The Children's Aid Branch is responsible for the administration of the Children's Protection Act, the Children of Unmarried Parents' Act, and the Adoption Act; supervision of the 52 Children's Aid Societies in the Province; supervision of institutions for children. It also co-operates with the Dominion Government in certain war services—British Child Guests, Dependents' Allowances, Supplementary Grants, Compassionate Leave, and other family welfare problems created by war service.

*Day Nurseries.*—Day Nurseries and School Care projects are operated to care for children of mothers engaged in war industry.

*Soldiers' Aid Commission.*—Through the commission, advice and emergency assistance is extended to ex-servicemen of the present war and the War of 1914-18, and their families.

**Manitoba.\***—The Department of Health and Public Welfare of the Province of Manitoba is organized into three main Divisions: the Executive Division; the Welfare Division; and the Health Division.

The Executive Division includes the general administrative offices, administration of estates of mentally incompetent persons, fiscal supervision of public institutions, health education, statistics and provincial laboratories.

The Welfare Division consists of three subdivisions: (a) Grants to Charitable Institutions, which come under the control of the Welfare Supervision Board; (b) Child Welfare, which includes Mothers' Allowances, with an expenditure amounting to approximately \$400,000 per year; Child Care and Protection, which has to do principally with the supervision of Children's Aid Societies covering practically the whole of the Province; and Legal Supervision, which is responsible for the work in connection with unmarried mothers and adoptions; (c) Social Assistance, which is concerned with the provision of assistance to unemployable persons in unorganized territory and the maintenance of aged and incurable persons in and outside institutions.

An outline of the work of the Health Division is given in the Chapter on Public Health and Related Institutions.

A new over-riding Division which cuts across all the activities of the Department has been set up and is known as the Section of Local Health and Welfare Services. This Division is responsible for the control of local part-time health officers, the

\* See also material concerning pensions for the aged and the blind at pp. 670-672.

establishment and supervision of local health units, and consultative services to local Health Departments throughout the Province. This work is to be extended to include the same type of service in the welfare field.

*Mothers' Allowances.*—Manitoba was the first province to enact this type of legislation, the Act having come into force on Mar. 10, 1916. As stated above, the Act is administered by the Child Welfare Subdivision and statistics of operations are given at p. 676.

*Workmen's Compensation.*—The Workmen's Compensation Act came into force on Jan. 1, 1917. See also pp. 723-725.

**Saskatchewan.**—Among the welfare activities of the Province are:\*

- (1) Bureau of Child Protection
- (2) Industrial Schools
- (3) Homes for the Aged
- (4) School for the Deaf
- (5) Mothers' Allowances

In addition, certain aspects of agricultural relief take the form of welfare work, more perhaps in the case of Saskatchewan than in the other provinces. The difficulty of drawing the line between what is welfare and what is unemployment relief, as well as the fact that all forms of relief have been carried out with Dominion assistance, render it advisable to treat the subject in the Labour Chapter. See p. 693 of the 1942 Year Book for the latest information.

Child welfare work is carried out under the direction of the Provincial Bureau of Child Protection and through the Children's Aid Societies of the four larger cities, three of which maintain shelters. The Industrial School for Boys, at Regina, is the joint concern of the Bureau of Child Protection, the Department of Education and the Department of Public Works. Delinquent girls are sent to homes in Manitoba and Alberta at the cost of the Bureau.

The Provincial Government maintains a home for the aged and infirm and, in addition, there are four homes of this type operated by religious bodies.

A provincial residential school for deaf children is located at Saskatoon.

*Mothers' Allowances.*—Mothers' allowances are paid under the Child Welfare Act, originally enacted in 1917 as the Mothers' Pensions Act. For statistics of operations see p. 676.

*Workmen's Compensation.*—The Workmen's Compensation (Accident Fund) Act became effective July 1, 1930. See also pp. 723-725.

**Alberta.**—The Bureau of Public Welfare now administers a comprehensive program of welfare activities, many of which were originally administered by other Departments. Among the activities of the Bureau are listed:\*

- (1) The Care of Neglected and Dependent Children
- (2) Homes for the Aged
- (3) Care of the Single Unemployed Without Municipal Domicile
- (4) Improvement of Economic Conditions of the Métis
- (5) Mothers' Allowances

\* See also material concerning pensions for the aged and the blind at pp. 670-672.

The care of children is carried out in foster homes or by grants-in-aid to religious or charitable institutions: the Province does not maintain a reform school but employs the foster-home system, placements being chiefly on farms.

The education of deaf and blind children is the responsibility of the Department of Education, which maintains children in special schools outside the Province and grants are made to sight-saving classes and classes for sub-normal children in the larger cities.

Homes for the aged, operated by municipalities or religious bodies, are granted financial assistance.

Persons suffering from paralysis following poliomyelitis are aided to rehabilitate themselves by financial aid for business and vocational training.

Two hostels for men are maintained at Edmonton and Calgary where destitute single men, without permanent municipal domicile, are cared for and two welfare depots are maintained in the country. Single ex-service men are cared for in Calgary and Edmonton without being institutionalized. The Bureau has also been successful in the rehabilitation of families by resettling them on the land.

The rehabilitation of the Métis—those of mixed Indian and White blood who do not qualify under the Indian Act—has been carried out by the setting aside of tracts of land as Métis Settlement Areas, where the colonists have exclusive fishing, hunting and trapping rights and where they are encouraged to engage in lumbering, agriculture and stock-raising. Educational and social services are provided and government-operated stores sell goods at cost price.

The Mothers' Allowance Act was passed in 1919 and became effective in that year. Statistics of payments under the Act are given at p. 676.

*Workmen's Compensation.*—The Workmen's Compensation Act of 1918 became effective Aug. 1, 1918, as regards mining, and Jan. 1, 1919, in respect of all other industries except agriculture, retail trade and offices. Amendments in 1919 and 1928 brought all railway trades except conductors and trainmen under the scope of the Act. See also pp. 723-725.

**British Columbia.**—The welfare services operated by the Province include:\*

- (1) Child Welfare
- (2) Industrial Schools
- (3) School for the Deaf and Blind
- (4) Mothers' Allowances
- (5) Social (family and individual) Allowances
- (6) Home for the Aged and Provincial Homes
- (7) Provincial Infirmaries

Child welfare work is under the Child Welfare Branch of the Department of the Provincial Secretary and covers the protection of children, adoptions, placements in foster homes, children of unmarried parents, juvenile delinquency, etc. In Vancouver and Victoria the work is carried out in co-operation with Children's Aid Societies but elsewhere all activities are directly administered by the Branch.

There are two industrial schools, one for girls and one for boys, under the Provincial Secretary's Department, and the school for the deaf and blind is administered by the Department of Education.

\* See also material concerning pensions for the aged and the blind at pp. 670-672.

Mothers' allowances are administered by the Social Assistance Branch of the Provincial Secretary's Department, the Act being in force since July, 1920. The Branch also administers the social allowances, funds for this purpose being voted by the Legislature to cover needy cases which do not come under the provisions of any special Act. Medical services and prescribed drugs are provided for all types of social assistance cases. In organized municipalities the Province bears half the cost and in unorganized territory the whole cost. Supplementary assistance is also being given to old age pensioners for the protection of their health and comfort. The Province operates a Home for the Aged and a Provincial Home, together with three provincial infirmaries. The cities of Vancouver and Victoria also operate Homes for the Aged.

*Workmen's Compensation.*—The Workmen's Compensation Act has been in effect since Jan. 1, 1917. See also pp. 723-725.

## WELFARE STATISTICS

### Section 1.—Unemployment Insurance

Because of its close relationship to labour and the fact that unemployment insurance is administered with selective service and manpower it is considered advisable for the present to continue to carry these statistics in the Labour Chapter where they will be found at pp. 712-715.

### Section 2.—Workmen's Compensation

Workmen's Compensation can be regarded from two standpoints, viz., (a) the industrial and (b) its relationship to the broad field of public welfare. It is perhaps one of those border-line cases where either point of view is justified (see Section 7 for others). Nevertheless because Workmen's Compensation (unlike Unemployment Insurance for instance) is entirely the responsibility of industry, and is closely associated with labour and the compensation of the worker, it is felt that the statistics regarding it are more logically dealt with in the Labour Chapter where they will be found at pp. 723-725. The welfare aspects of payments made to workers injured in the course of their duties should not, however, be overlooked.

### Section 3.—Old Age Pensions and Pensions for Blind Persons\*

*The Old Age Pensions Act, 1927.*—Legislation respecting Old Age Pensions (R.S.C., 1927, c. 156) was adopted by the Dominion Parliament in 1927. Under the provisions of this Statute the Dominion Government reimbursed each province participating in the Dominion scheme to the extent of one-half of the provincial expenditure for old age pensions. An amendment passed at the 1931 session of Parliament (c. 42, Statutes of 1931) provided that the Dominion contribution to the provinces be increased from 50 p.c. to 75 p.c. of the provincial disbursements for old age pensions. The Dominion contribution of 75 p.c. of provincial disbursements was made effective from Nov. 1, 1931; the provinces have since been reimbursed on this basis.

By Orders in Council passed under the authority of the War Measures Act, the maximum pension has been increased from \$240 to \$300 a year and the maximum income (including pension) from \$365 to \$425 a year.

---

\* Revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, Ottawa.

The Dominion Old Age Pensions Act is now operative in all provinces and in the Northwest Territories.

Conditions under which pensions are granted and the qualifications required of applicants are set forth at p. 705 of the 1941 Year Book.

**Pensions for Blind Persons.**—By an amendment to the Old Age Pensions Act in 1937, provision was made for the payment of a pension to every blind person who, at the date of the proposed commencement of pension, complied with certain conditions. These are set forth at pp. 706-707 of the 1941 Year Book. The amendments made under the War Measures Act also apply to blind pensioners. The maximum income (including pension) is, however, higher in the case of a blind pensioner. The amounts in different cases are covered in the Old Age Pensions Act, c. 156, R.S.C. 1927, as amended.

At Dec. 31, 1943, the average pension received in each province was as follows: P.E.I., \$22.41; N.S., \$20.75; N.B., \$22.98; Que., \$24.35; Ont., \$23.88; Man., \$24.23; Sask., \$24.45; Alta., \$23.99; and B.C., \$24.26.

## Section 4.—Government Annuities

For thirty-five years the Dominion Government has carried on a service that permits and encourages Canadians, during the earning period of their lives, to make provision for their old age. The necessary legislation was passed in 1908 as the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33, 1931). This Act is now administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in quarterly instalments (unless otherwise expressly provided) for life and may be guaranteed for ten, fifteen, or twenty years in any event. The minimum amount of annuity obtainable on the life of one person or on the lives of two persons jointly is \$10 a year and the maximum amount is \$1,200 a year.

Annuity contracts are of two classes, deferred and immediate, under each of which there are various plans available. Deferred annuity contracts are for purchase by younger persons desiring to provide for their old age, purchase being made by monthly, quarterly, or yearly premiums, or by single premium. Immediate annuity contracts are for purchase by older persons who wish to obtain immediate regular incomes through their accumulated savings.

The property and interest of the annuitant in a contract for a Government annuity is neither transferable nor attachable. In the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid is refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c. per annum, compounded annually.

Although in the vast majority of cases annuities issued on the lives of individuals are purchased by the individuals themselves, provision is made in the Act whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members. In the latter case the purchase money required may be derived partly from the wages of employees and partly from employers' contributions.

From Sept. 1, 1908, the date of the inception of the Government annuities system, up to and inclusive of Mar. 31, 1943, the total number of annuity contracts and certificates issued was 90,350. Of these, 8,723 have been cancelled, leaving in force on Mar. 31, 1943, 81,627 contracts and certificates. The total amount of purchase money received during the same period was \$212,150,686.

Up to Mar. 31, 1943, about 150 firms and institutions had entered into agreements with the Government to purchase annuities and on that date approximately 20,000 employees or members were purchasing deferred annuities thereunder. The agreements followed different group-annuity plans, drawn up according to specific requirements in each case. Interest in this type of annuity was maintained in the year 1942-43. The number of annuities issued in that year included 4,171 deferred annuity certificates issued to employees under the system whereby one group contract is issued to the employer, the employee receiving a certificate.

#### 4.—Government Annuities Contracted for, and Purchase Money Received, Fiscal Years 1924-43

NOTE.—Figures for the years 1909 to 1923 will be found at p. 813 of the 1942 Year Book.

### Section 5.—Mothers' Allowances\*

An outline of the legislation respecting mothers' allowances in force in the various provinces of Canada is given at pp. 707-709 of the 1941 Year Book and amendments made in 1941 were noted in the 1942 volume. In 1942 and 1943 the following changes were made: (1) In Nova Scotia the maximum allowance has been raised to \$80 a month and allowances may be granted to a mother whose

\* Revised from data obtained from the provinces concerned, under the direction of A. MacNamara, Deputy Minister, Department of Labour, Ottawa.

husband is unable to support his family by reason of permanent disability. Allowances may also be paid in respect of a legally adopted child. (2) In New Brunswick the Mothers' Allowances Act, 1930, c. 10, was proclaimed in force, Aug. 18, 1943. (3) In Quebec an allowance may be granted to a mother who is the wife of a totally disabled man, whether in an institution or not, or to the wife or widow of a British subject, as well as to a British subject by birth. (4) In Alberta an allowance may be paid for boys up to 16 years of age. (5) In British Columbia an allowance may be paid in respect of a child between 16 and 18 years of age and to a child living apart from its mother, on conditions to be fixed by the regulations.

Pending the compilation of statistics on a comparable basis as between provinces, separate tables are presented below.

### 7.—Mothers' Allowances in Nova Scotia, Years Ended Nov. 30, 1936-42

**Section 6.—The Care of Dependent and Handicapped Groups\***

Statistics regarding children and adults under care in charitable and benevolent institutions and in Children's Aid Societies were first collected by the Dominion Bureau of Statistics in 1931 and were published in Volume IX of the census of that year. A second report was published in 1937 and a third, as yet unpublished, covers the year 1941 and provides the basis for the following analysis of the latest data collected for this division of the social welfare field.

Data in this section refers to dependent and handicapped groups under custodial care; consequently the persons enumerated cover only those who were receiving custodial care, both in approved institutions and those under the care of Children's Aid Societies in shelters and foster-homes. All homes for the care of the aged and indigent, refuges, asylums, orphanages and all Children's Aid Societies incorporated under the various Children's Protection Acts are fully represented in this survey.

The figures do not include:—

- (a) Children attending day nurseries. Day nurseries, of which there were fifteen operating in 1941, properly belong to preventive and educational services as they serve the purpose of looking after pre-school children for mothers obliged to work during the day.
- (b) Children under the protection of any Provincial Department of Child Welfare whose wards are not institutionalized. Thus, Alberta's child welfare work is directly under a Superintendent of Child Welfare who carries on his work on behalf of dependent and neglected children without the use of institutions or Children's Aid Societies. All children who become wards of the Provincial Government are placed, for care and protection, in selected homes throughout the Province. In 1940 the Provincial Report on Child Welfare for this Province stated that the number of such children placed in foster homes by the Department of Child Welfare was 615. This number does not appear under the figures for institutions for Alberta as given in this section.

The work of the various institutions and agencies covered may be classified under two main headings: the care of adults and the care of children (the term including minors under 20 years of age). The line of demarcation is not clear-cut, as many institutions care for both classes (see Table 14). Statistics in Tables 15 and 16 have been compiled to show the distinction.

\* The statistics in this section are taken from the reports of the Institutions Statistics Branch of the Dominion Bureau of Statistics. Tables and text have been checked by J. C. Brady, M.A., Chief of the Branch.

<sup>1</sup> Departments of Municipal Governments.

**Care of Adults.**—At the date of the Census, June 2, 1941, there were 16,523 adults under care, of whom 12,033 were in homes for adults only, and the remaining 4,490 in institutions which also cared for children. As may be deduced from Table 15, 11,358 persons, or 68.7 p.c. of the total, had attained the age of 60 years or over. Only 2,119, or 13.4 p.c., were maintained entirely from their own funds or by relatives, although another 1,233, or 7.5 p.c. (or their relatives) were able to pay a portion of their maintenance, leaving 13,171 to be maintained from public funds or by private charity. In regard to mental and physical conditions, 3,890, or 23.5 p.c., were classed as either harmlessly insane, feeble-minded, epileptic or sub-normal, and 1,855, or 11.2 p.c., were either blind, deaf and dumb, or crippled.

**Care of Children.**—An estimated increase of 54 p.e. in juvenile delinquency\* from 1939 to 1942 reveals the value of home training in normal times, since much of this increase is attributed to the absence of the father on active service or at a distant point, or to the mother being engaged in war work. Where such parental care is lacking, the gap has to be filled as well as possible by organized agencies operating under the direction of the Departments of Public Welfare in the various provinces, and by the Children's Aid Societies, the Big Brother Movement and the Big Sister Association, the summer camps organized by service clubs—often in conjunction with the local juvenile court—and by the Y.M.C.A. and church groups, whereby children at a loose end are given instruction in good citizenship and are afforded a substitute for parental counsel and example.

While the present-day tendency is to permit children requiring supervision and care to remain in their own homes under such official or other supervision as is necessary and to place orphans and neglected children in approved foster homes, there are still many cases where housing in an institution is desirable or necessary; in fact, the institutions will always be necessary as receiving stations where children can be kept until suitable arrangements can be made for their absorption into the life of a family.

The following statistics cover children cared for in four types of institution: (1) homes for adults and children; (2) orphanages; (3) Children's Aid Societies; and (4) juvenile immigration societies. (As explained at p. 677, day nurseries are not included.) Table 14 gives the number of each type reporting. At the date of the latest census, June 2, 1941, there were 38,046 young persons from 0-20 years of age under care in these four classes of institution, as follows: (1) 6,104; (2) 14,669; (3) 16,991; (4) 282.

Table 16 shows the distribution of these 38,046 children by age groups and provinces together with the placement of the children and indicates that only about 65.2 p.e. of the children under care were actually domiciled in the sponsoring or other institutions or in hospital, the remainder were placed either in foster homes or were under supervision in their own homes. The source of maintenance by provinces is also shown in Table 16, and Table 17 gives the family status of children under care.

\* For statistics of juvenile delinquency, see the Judicial and Penitentiary Statistics Chapter of this volume.

<sup>1</sup> Figures do not include children placed in foster homes by the Superintendent of Child Welfare for the Province (see p. 677).

If children listed under the "other or not applicable" heading in Table 17 are deducted (this heading includes children whose parents are insane and those for whom full particulars are not available) there were 33,702 children remaining whose family status was known. It is noteworthy that, of all the children under care,

only 4,567, or 13.5 p.c., were living with both their parents before coming under the care of a social agency or institution; of the remainder 11,614, or 34.5 p.c. of the 33,479 were illegitimate, although some of the 1,565 whose parentage was unknown may come under this category. It is rather remarkable that only 833, or 2.5 p.c. of the children of known social background were the offspring of divorced parents. It is, of course, quite possible that some of the children reported under other headings should have been included here. Further experience in the collection of these statistics should lead to the refinement of the measurements used so that future reports should be much more specific in the measurement of the extent to which divorce and illegitimacy contribute to the placement of children in institutions or under the care of social agencies.

### Section 7.—The Canadian Red Cross; The Victorian Order of Nurses; and The Saint John Ambulance Association

Each of these organizations carries on important welfare work but their major activities are related more directly to public health than to welfare and for this reason the data regarding their operations are given in the Public Health Chapter of this volume.

## PART II.—TRENDS IN THE FIELD OF SOCIAL WELFARE

Part I of this Chapter has dealt with all Dominion and provincial social services with the exception of such matters as housing and education, which are treated in other chapters (see Index). These have been established in Canada over a period of time to ameliorate the condition of those who are the victims of an unprovided-for old age, or of accidental circumstances of one kind or another. All advanced countries have legislation along these or similar lines. Recently much has been heard of what is being done in the United Kingdom, the United States and Canada in the direction of 'social security', which would go much further than the provision of social services for the unfortunate. The success of any plan for social security must depend on the assurance of a high degree of employment and its maintenance. On the other hand, a full-employment policy could hardly be successful without fairly far-reaching control over exchange and international trade since the effects of severe economic crises in other countries, unless controlled by some international machinery, would likely be far-reaching on any particular national economy. Unfortunately, at present these factors cannot be taken for granted.

As a result of the many plans and discussions that have been advanced, a broad crystallization of opinion is in evidence among English-speaking peoples that shows itself in a strong tendency to look to the State to provide conditions under which, in post-war years, men and women may look forward to an increasing degree of economic security.

The issue, so far as it has taken shape, is the prevention of want by the security of income for all individuals and families regardless of what else might have to be sacrificed to ensure it. To afford this, some of the extras and luxuries of life would, admittedly, have to be sacrificed until what is regarded as the national minimum is satisfied.

The individual plans that have so far been advanced need to be studied in relation to the present and post-war economic structure of the particular countries where they are intended to be applied and must not be blindly compared. Thus, the proposed Marsh Plan for Canada (referred to later) would, according to estimates, cost \$1,000,000,000 a year (including revenues from taxes and other sources) with an additional \$1,000,000,000 for a works program during the first post-war year. This represents between 20 and 25 p.c. of the *present* national income for the first year and 10 to 12 p.c. thereafter. But the present national income is admittedly greatly increased by war-time conditions. What the post-war national income will be is an unknown quantity and it would be futile to hazard a guess to-day as to the actual burden that such a plan would impose on the post-war economy.

Nevertheless, the movement towards post-war social planning is strong, although governments everywhere are slow to commit themselves to specific obligations until more is known of the practicability of the schemes advanced and the burdens they will impose on national budgets. All three of the programs that are referred to below (United Kingdom, United States and Canadian) have certain features in common—each attempts to provide in appropriate ways against the common risks of interruption of income and other hazards, each emphasizes the role of constructive and preventive measures, each utilizes so far as possible the machinery that has developed in the past on a piecemeal basis, and none has been officially accepted at the time of writing (Jan. 1, 1944). In the case of the United Kingdom the backlog of legislation and experience is very much greater than in either of the other two

countries, which no doubt accounts for the fact that where the Beveridge Report is definitive and specific in its proposals, the United States scheme is more exploratory and educational. In this respect, the Canadian proposals fall somewhere between the two.

## Section 1.—British and United States Proposals

**A British Plan.**—The most important document that has arisen out of the proposals so far put forth, and one that has had a potent influence on American thought in the field of social security, is the "Report on Social Insurance and Allied Services"\* by Sir William Beveridge, issued in Great Britain in November, 1942, under the auspices of the United Kingdom Government. The background of this report is to some extent a consolidation and extension of existing United Kingdom social legislation strongly supported by broad general recommendations for the development of a comprehensive social insurance program based on a strong foundation of social responsibility.

Sir William Beveridge uses the term "social security" to denote the securing of a national minimum income to take the place of "earnings when they are interrupted by unemployment, sickness or accident, to provide for retirement through age, to provide against loss of support by the death of another person, and to meet exceptional expenditures such as those connected with birth, death and marriage".

The Beveridge Plan is a tax plan by which specific levies, supplemented from general taxation, would be earmarked for specific purposes on condition of service and contribution and is based on the maintenance of the minimum *family* income. It is admitted that a high average level of employment is essential to the success of the Plan and it is assumed that such re-adjustments of economic policy will be made that productive employment can be maintained at the required level. There are other basic assumptions such as an assurance of political security, economic regularity and technical efficiency. In the light of present uncertainty as to post-war conditions, it is perhaps significant that these assumptions of the report rather than its recommendations have received attention from its critics.

By introducing the principle of comprehensiveness of application (the Plan is designed to cover the entire nation) and a set rate of contribution for each of six classes into which the population is divided, the Plan is designed to distribute the burden on the shoulders of the whole community.

All classes would be insured for medical treatment and funeral grants; children's allowances would be payable for minors and retirement pensions for the aged. The benefits available for housewives are a special feature of the Plan and are explained in paragraphs 339 to 347 of the Report: they include marriage grants, maternity grants, widowhood and separation provisions and retirement pensions: housewives also share in the husband's unemployment or disability benefits. Maternity grants would differ for housewives who have no occupation outside their homes and those who are gainfully occupied.

The financing of the Plan is based on the contributory principle (by insured persons, employers and the Government) but two items viz., children's allowances and national assistance are left to be financed from general taxation. About 47 p.c. of the increased expenditures that the Plan entails would be met by the insured

\* *Social Insurance and Allied Services* by Sir William Beveridge. Published by His Majesty's Stationery Office, London, Price 2s 0d net.

people, 21 p.c. by the employers, and about 32 p.c. by the Exchequer. The total cost of implementing the Plan is estimated at £697,000,000 (about \$3,125,000,000). This is estimated to be about 10 to 12 p.c. of the present United Kingdom national income if the Plan were put into effect in 1945, rising to £858,000,000 (about \$3,860,000,000) by 1965.

The Government of the United Kingdom has indicated that it will accept in principle a majority of the Beveridge proposals and legislation is being prepared to implement these. The first proposals to be taken up are to be those concerned with national health.

**A United States Plan.**—The Report of the National Resources Planning Board,\* illustrates the terms in which the United States is thinking of the problem of social security. They are less specific than those of the British Plan. Nevertheless, the Report goes far in lining up United States with British and Canadian opinion on social security. The problem is stated in the following terms:—

- (a) The need for socially provided income is in large measure a consequence of imperfections in the operation of the national economy and by personal, physical or psychological defects, many of which can be remedied.
- (b) The public-aid problem is likely to be both large and persistent for some time to come.
- (c) The social problem as created by economic insecurity is many-sided and requires for its solution a series of diversified programs.

The report, after stating the case, outlines the ways and means whereby, in the eyes of its authors, the objectives can be achieved and freedom from want can be assured for citizens of the United States. The major objectives and recommendations are:—

(1) The vital importance of immediate planning for full economic activity and full employment is emphasized. Unemployment can, it is believed, be abolished and the national income can be maintained at high levels if the proper national and international steps are taken. But even with full employment the need for social security measures would still exist for those too old to work, too young to work, too sick to work, or who are undergoing relatively short spells of unemployment for one reason or another.

(2) Following on (1), the principle is laid down of public provision of work for all employable persons, whom private industry cannot employ, if they have been out of work for more than six months—such work carrying remuneration as nearly as possible equal to that in private employment and with the corresponding insistence on “standards of performance” required by private employment. This point and the one which follows are stressed in the United States document to a much greater extent than in the United Kingdom or Canadian reports.

(3) The development of special schemes for young people to make it possible for them to continue their education or in other cases to enable unemployed young people to acquire the work disciplines and familiarity with the use of tools that would enable them to take their place in industry on reaching adult age.

(4) The expansion of social insurance to provide minimum income for all who are unable to work through no fault of their own or who are undergoing short periods of unemployment, and to provide minimum income in cases of permanent or tem-

\* *Security Work and Relief Policies*, National Resources Planning Board: Published by the United States Government Printing Office, Washington, D.C., Price \$2.25.

porary disability. Recommendations are also made to increase present social insurance benefits, especially to dependants, for unemployment and disability and for the substitution of a federal system of unemployment insurance for existing State programs.

(5) A comprehensive underpinning of social security by the development of an adequate and comprehensive general public assistance program.

(6) Much greater emphasis than in the past should be placed upon preventive and constructive measures such as health measures, education and training opportunities, and a revitalization of the functions of the employment service.

*Financial and Administrative Policy.*—In regard to these matters the main principles laid down are: that the financing of public aid should be considered as a normal function of government and that the fiscal system should be re-organized accordingly. The distribution of financial responsibility between the various levels of government is advisable and should reflect differences in need and in fiscal capacity. Although Federal-State co-operation is preferable the allocation of administrative responsibility should be determined by capacity of the different governmental bodies and by the national importance attached to the particular program.

*The Wagner Bill of June 12, 1943.*—Official recognition of the social security program has gone to the point of the framing of a Bill to expand insurance benefits. This Bill, known as the Wagner-Dingell-Murray Bill, has been sent to Congressional Committee and has already been the subject of carefully directed activity.

## Section 2.—Canadian Proposals for Social Welfare

In the organization of social services by any public authority, the social, political and traditional background against which they must operate is all-important. A plan workable in one country might be quite unsuited to another. Canada has her own peculiar set of difficulties that involve special problems and demand special treatment. Moreover, there are constitutional aspects to the problem that make it necessary that every angle of the question should be well thought out. Whereas the Beveridge Plan is concerned to a large extent with co-ordinating services that already exist or have their foundations in existing organizations, in Canada many services would be largely new and would have to be developed slowly. Both the Canadian Senate and the House of Commons took steps early in 1943 to examine and consider matters connected with social welfare. A Special Senate Committee on Economic Re-establishment and Social Security was set up on Mar. 5, 1943. See p. 738.

On Mar. 8, 1943, the House of Commons appointed a Special Committee, representing all parties, to examine and report on a national plan of social insurance for Canada. This Committee was asked to consider three documents: the first was the report of the Advisory Committee on Health Insurance, the second was the draft for a National Fitness Bill\* for the promotion of physical education and sports, and the third was a general report on social security for Canada prepared by Dr. L. C. Marsh, for the Advisory Committee on Reconstruction.

\* Under this Bill which, on the recommendation of the House Committee on Social Security was passed as the National Physical Fitness Act on July 31, 1943, a grant is approved for the improvement of the physical standards of Canadian youth through sports, athletic and other pursuits.

**Plan for Public Health and Health Insurance.\***—The Dominion Government set up the Advisory Committee on Health Insurance in February, 1942, under the Director of Public Health Services, with instructions to formulate a health insurance plan. The Committee prepared drafts of suggested Dominion and provincial legislation that might form the basis of a national system of health insurance and on Mar. 16, 1943, the Minister of Pensions and National Health submitted the Report† to the House of Commons Committee.

The Draft Health Bill that accompanies the Report would empower the Dominion to make grants for public health and medical care to the provinces provided the provinces maintained their health services up to the prescribed standard of completeness, but it would empower the Dominion Government to approve, for the purpose of making a grant, provincial schemes although they did not comply with the Draft Bill in all respects.

The amounts of the grants would depend on the relative fiscal resources of the Dominion and the provinces at the time when legislation is put into force. The proposed Dominion Health Insurance grant for provincial schemes would be a fixed sum per head of population. The Dominion Public Health grants proposed are a supplement to the cost incurred by the province for each service. These grants are proposed to be made to the provinces for the following health services:—

*Health Insurance.*—To assist the provinces in providing health insurance benefits.

*Tuberculosis and Mental Diseases.*—To help provide free treatment for all persons suffering from tuberculosis or from mental diseases and includes the provision of additional buildings and bed accommodation.

*General Public Health.*—To assist the provinces in establishing and maintaining public health services commensurate with the needs of their people.

*Venereal Disease.*—To aid in providing preventive and free treatment and to provide free diagnostic and treatment clinics.

*Professional Training.*—To afford financial assistance to doctors, sanitary engineers and others who wish to take university courses leading to degrees in public health.

*Investigatory Work.*—To enable the provinces to carry out special investigations concerning public health or public-health measures.

*Crippled Children.*—To enable the provinces to establish and to conduct programs for the prevention of physical defects in children.

The fundamental and primary object of the Plan is the integration of public health and medical care for the purpose of raising and maintaining the standard of health of the people of Canada.

The provisions of the Draft Bill include compulsory and contributory insurance for all persons resident in Canada on the assumption, of course, that each province agrees to come into the scheme.

The Draft Bill does not prescribe the rate of the actuarial premium, since it is not likely that the same rate will be appropriate for all the provinces but it does provide that the premium shall be uniform for all adults in a province, and that there shall be lower rates for persons between 17 and 20 years of age and still lower rates for employed children.

\* This summary outlines the situation as at the end of 1943; since that time modified proposals have been advanced; these, however, cannot be considered as final and, therefore, further developments will be dealt with in the 1945 Year Book.

† Report of the Advisory Committee on Health Insurance, King's Printer, Ottawa, 1943, Price \$1.50.

The premium for adults is calculated to be sufficient to cover the cost of benefits both for the adult and for any children dependent on him. No direct charge would therefore be made for children up to a prescribed age. Insured persons are divided into two classes: "employed insured persons" and "assessed insured persons". The payment of contributions has been so devised that these classes will contribute in proportion to their wages or incomes. Assessed insured persons are persons who have an income from a source other than wages, or who are indigent. Employed contributors pay into the fund on the basis of a fixed percentage of earnings but the total contribution is not to exceed the amount set forth in Schedule A. Where the contribution falls short of the latter amount, the employer must make up the deficiency in respect to the wage-earners or contributors but the Province is called upon to meet the deficiency in respect to dependants. The assessed insured person, like the employed insured person, if his income exceeds a prescribed amount, will pay the entire cost; if not, the province will pay the difference. Contributions will be supplemented by a Dominion grant. Free choice of doctor, dentist, pharmacist and hospital from a list provided after consultation between the Provincial Health Insurance Commission and authorized professional bodies would be made by the individual, for himself and family. Remuneration of physicians, dentists, etc., is to be left to the decision of the Provincial Health Insurance Commission either by salary, fee, fee for service or capitation "after consultation".

**Benefits.**—The benefits comprise prevention of disease and the application of all necessary diagnostic and curative procedures and treatments. Provision is not made for cash benefit due to unemployment caused by illness as it is considered that such benefit should be provided by other means.

Medical benefits include the services of a general practitioner. On his recommendation those of a consultant, specialist, surgeon, obstetrician, nurse, and necessary hospitalization may be added.

Dental benefit during an initial period may be restricted to young persons. It is proposed that the Provincial Dental Association make an arrangement with the Provincial Health Insurance Commission to provide every child up to sixteen years of age with a semi-annual dental examination and such reparative dentistry as is needed.

Pharmaceutical benefit is in accordance with a list of drugs to be drawn up in co-operation with the Provincial Health Insurance Commission and the Provincial Pharmaceutical Association. Special provision may be made respecting drugs and pharmaceutical preparations known as 'specialties'.

Hospital benefit would include general ward services unless the insured person wishes by paying the difference to obtain semi-private or private room. In special cases accommodation other than general ward may be provided.

Nursing benefit will be provided by the Provincial Health Insurance Commission in co-operation with the Provincial Nursing Association. Nursing in the home is confined to the visiting nurse except where the circumstances are such that bedside nursing is essential.

**Administration.**—Provision is made for administration through Provincial Health Insurance Commissions—one in each province. These Commissions may be authorized by regulation to establish committees, councils or other bodies for consultative, advisory and executive purposes or for obtaining effective co-operation in the administration of the Health Insurance Bill.

Inasmuch as Dominion administration is confined to the administration of Dominion grants, it is not considered necessary to create a Dominion Health Insurance Commission, but a National Council on Health Insurance comprising the Director of Health Insurance of the Department of Pensions and National Health as Chairman, the Deputy Minister of Health of each province, the Chief Administrative Officer of each province which has established a Health Insurance Act and such other persons as may be appointed by the Governor in Council for restricted groups is provided for.

**The Marsh Plan.**—The Report on Social Security\* suggests a series of considerations and principles that should be taken into account in designing a comprehensive social security system. The plan is not worked out in detail but is rather a discussion of general principles and the report emphasizes that integration and administration of any scheme will not be possible unless Federal and Provincial Governments work out a close understanding as to their respective responsibilities.

The aim of the Report is to explore and co-ordinate the main features of existing statutory provisions for social security in Canada; to set out the methods by which these provisions can be improved and extended, particularly by transformation of the coverage and the technique of a social insurance basis; and to consider the principles which should be taken into account if the construction of a comprehensive social security suited to Canadian conditions is to be undertaken in the most fruitful and effective manner.

The broad field of social security is dealt with in five Parts.

Part I is background, and deals with the nature of social insurance and of social insurance standards.

Part II emphasizes the place of employment from a labour-market viewpoint and

Parts III and IV examine all other branches of social insurance other than unemployment insurance.

Part V brings to a focus the most important matters calling for decision such as: the inter-relationship between the units of a comprehensive scheme; constitutional and administrative issues; and financial policy.

The contingencies that should be covered by a comprehensive social security system are defined as:—

- (1) Interruptions of earnings, due to unemployment, sickness, permanent disability, old age, premature death;
- (2) Occasions requiring expenditures which strain the family budget, such as medical and funeral costs;
- (3) Insufficiency of income to meet the cost of child maintenance.

Two groups of insurance schemes are considered in the Report:—

- (a) Those designed to meet the need for medical care and for pensions—needs which are universal, applying to wage-earners and others alike. Pensions would be uniform in amount for all recipients, the principle being that they are intended to meet a permanent need and should afford at least a minimum of subsistence.

\* Report on Social Security for Canada prepared by Dr. L. C. Marsh for the Advisory Committee on Reconstruction, King's Printer, Ottawa. Price 50 cents.

- (b) Those that meet the special needs of the wage-earning populations, viz., workmen's compensation, unemployment benefit, sickness cash benefit and (for employed women) maternity benefit. Suggested benefits are less than, but are proportionate to, wages in these cases, and are designed to meet temporary situations. For low-wage earners the benefit would be less than the minimum of subsistence but this group will consist mainly of young, single persons.

In order to achieve a reasonable distribution of cost and to simplify administrative procedure when a person moves into and out of employment, it is proposed that the costs of the benefits under (b) be borne by the employer and that the cost of the universal insurances under (a) be shared between the insured person and the Dominion or province or both.

**Summary of the Provisions of the Plan.**—The six main headings under which Dr. Marsh sets forward his proposals are:—

- (1) *A National Program for the Promotion of Employment.*—This would provide for placement and training facilities; subsidiary employment projects; and unemployment assistance. These operations and services would be financed under Dominion direction with provincial co-operation.

The greatest change in statutory provision for social and economic risks in Canada has been the establishment of unemployment insurance. The first positive measure in providing social security, therefore, is a program to make work available. The program must be governed by the role of public expenditure and total fiscal policy in the national and international economy as well as by the numbers of unemployed.

Another positive measure which is needed in a full-employment program is a system that will help to equip people for new skills if there are no openings for those they already possess. This will call for co-operative effort between government and industry, ingenuity in the development of training and educational technique.

Training would be brought into operation for all unskilled workers, particularly if they are still young, as soon as they show lengthy unemployment records. "Training benefit" in the form of a maintenance rate payable on condition only that appropriate training courses are taken is suggested. This would be an application to civilians of the special vocational and placement arrangements now being organized for war casualties.

- (2) *Children's Allowances.*—Such allowances would be payable in respect of all children, or all but the first-born, while the parent was earning, and in respect of all children while the parent was receiving cash benefit for unemployment, sickness, disability or old age, or after the death of the father. The financing would be by general taxation and administration would be by the Dominion Government.

- (3) *Health Insurance, including the Provision of Medical Care.*—The Author of this Report was a member of the Advisory Committee on Health Insurance (see pp. 686-689) and took this Committee's proposals as the basis of the provisions under this heading but he advances somewhat more detailed proposals for financing.

- (4) *Disability Pensions, Old Age Pensions, Widows' and Orphans' Pensions and Funeral Benefits.*—These proposals would also have the same universal scope and contributions would be geared to the collection machinery outlined in the "Health Insurance Report" and would be administered by the Dominion. Subject to modifications during the initial transitional period, it is suggested that single persons or

widows would receive \$30 a month in case of disability or on attainment of the minimum pensionable age (65 for men and 60 for women). A married couple would receive \$45 in such cases. Children's allowances would be supplemented in the case of orphans. It is suggested that funeral benefit be attached either to pension insurance or to health insurance.

(5) *Unemployment and Sickness (Cash Benefit) Insurance.*—This insurance would be compulsory, only for industrial and urban wage-earners, and would be administered by the Dominion. Employers would contribute to the fund. As at present, benefits on account of unemployment, sickness and maternity would be proportionate to wages.

No extension of the social security structure can afford to ignore the existence and the necessity of co-ordination with the unemployment insurance system. It is suggested that the present rate for the single person remain the same but that the rate for married men should be raised to as much as 50 p.c. of the single rate for the lower and middle categories, and by a smaller percentage for the higher and middle categories and a still smaller percentage for the highest categories.

It is suggested that sickness cash benefits be paid at the same rates as unemployment benefit, and should be subject to a short waiting period before commencement of benefits. The pensions for permanent disability should be paid at the same rate as the old age pension where the latter is claimed at the minimum pensionable age.

The Report suggests that provision, on an insurance basis, be made for wage-earning women six weeks before and six weeks after the birth of a child and a pension on the same basis be made to widows having no children or, say, under 50 years of age until they take up a gainful occupation.

(6) *Workmen's Compensation for Industrial Accidents and Diseases.*—The provincial schemes would continue as at present, but possibly with some extension of their scope, and with a greater measure of uniformity among them.

### Comparisons and Conclusion

While the points of similarity between the three schemes for social security outlined above are many, there are important differences. The Beveridge and Marsh schemes are more comprehensive in that they include broad schemes of family allowances and funeral benefits. The National Resources Planning Board scheme, on the other hand, in place of assuming a basis of post-war full employment, as do the Beveridge and Marsh proposals, devotes more attention to ways and means of maintaining a high level of employment, for example, through government works programs and youth training schemes after peace is restored.

Both the Beveridge and Marsh Plans provide for protection against a wide range of social risks including unemployment, old age, disability and sickness. The Marsh Plan, however, does not cover marriage nor maternity grants as does the Beveridge scheme, although under the Marsh Plan prospective mothers would receive benefits under "sickness insurance" at unemployment insurance rates.

The Marsh report makes no special provision for widows as does the Beveridge scheme but in regard to children's allowances the proposals are somewhat broader. Benefits would go to all parents, for all children, and would average between \$8 and \$9 per child, per month.

The Beveridge Plan, on the other hand, is broader and more generous in respect to total disability than the Marsh Plan. Funeral grants are approximately equal under both schemes.

The greater homogeneity of the population of the United Kingdom as well as the differences in economic conditions and social attitudes are perhaps reflected in the proposed *uniform* benefits as contrasted with the graduated scales of benefit which, generally speaking, the United States proposals advocate and in the diverse nature of the National Resources Planning Board proposals.

**The Current Program of Dominion Government Legislation in Regard to Social Welfare.**—The Government in the Speech from the Throne delivered on the opening of the 5th Session of the 19th Parliament on Jan. 27, 1944, advanced specific proposals that would be implemented in the legislative programs concerned with welfare projects. These were as follows:—

- (1) The establishment of a new Ministry of Social Welfare to administer the Government's present and future programs of social betterment.
- (2) The granting of family allowances designed to equalize in some measure the social position of salary- and wage-earners with families, compared with others without similar obligations.
- (3) A National Health Insurance Scheme.
- (4) Increases in Old Age Pensions.

Before these measures can take their place in the Statute Books, Bills must be framed, terms dictated and the necessary final drafts sponsored through the various stages of parliamentary procedure.

Subsequent editions of the Year Book will cover the progress made in these directions.

---

Essential as social security measures are in preparation for post-war organization, it is being increasingly recognized that they are only one phase of such planning. By guaranteeing the people a basic subsistence level, they give the economic system an opportunity to maintain a high rate of employment, production and distribution and permit the standard of living to rise perhaps to heights beyond anything yet attained but which the war years have indicated to be well within reach. The first postulate is to maintain and if possible increase the goods and services that are available for distribution. The best social insurance measures will be worthless if they undermine the incentive to production and thereby result in a cumulative reduction of the national income. The positive phase of post-war planning, then, is to organize the national economy for nearly complete employment of human and material resources. If and when this is accomplished, social security measures will occupy an important but secondary place and will work hand in glove with economic planning generally.

### Section 1.—The Government in Relation to Labour

#### Subsection 1.—The Dominion Department of Labour

The Department of Labour of the Dominion Government was established in 1900. At the outset its chief duties were: the administration of the Conciliation Act designed to aid in the prevention or settlement of disputes, the administration of the Government's fair-wages policy for the protection of workmen employed on Dominion Government contracts and on works aided by grants of public funds, the collection and classification of statistical and other information concerning conditions of labour, and the publication of a monthly periodical known as the *Labour Gazette*.

At the present time, the Minister is responsible for the administration of the following: Conciliation and Labour Act; Industrial Disputes Investigation Act; Fair Wages and Hours of Labour Act; and the Fair-Wages Policy (covering in war-time a large proportion of industry); Government Annuities Act; Combines Investigation Act; Youth Training Act, 1939 and the War Emergency Training Scheme; Vocational Training Co-ordination Act, 1942; Unemployment Insurance Act, 1940; Reinstatement in Civil Employment Act, 1942; certain war-time regulations including the Wartime Wages Control Order and the National Selective Service regulations. The Deputy Minister of Labour is the Director of National Selective Service and the Wartime Wages Control Order is administered by a National War Labour Board.

General information concerning the publications of the Department and operation of the statutes are published in the 1942 Canada Year Book. Only current information is given below and particular attention is paid to war labour policies.

\* Except as otherwise indicated, the material in this chapter has been prepared or revised under the direction of A. MacNamara, Deputy Minister of Labour, Ottawa.

**The Industrial Disputes Investigation Act.**—Enacted in 1907, the Industrial Disputes Investigation Act, which forbids any strike or lockout until the matters in dispute have been dealt with by a Board of Conciliation and Investigation, normally applies to disputes in mines, agencies of transport and communication and certain public utilities. At the beginning of the present war, however, the scope of the Act was extended to cover disputes in industries producing munitions and war supplies and in construction work on defence projects. With the consent of the parties concerned, the machinery of the statute may also be utilized in connection with disputes in other industries.

This extension of the Act and the tremendous expansion of war industry in Canada brought about such an increase in the number of applications for Boards of Conciliation and Investigation that provision was made in 1941 for an informal inquiry into any disputes by an Industrial Disputes Inquiry Commissioner with a view to its prompt settlement, if possible, without recourse to the more formal and expensive procedure of appointing a Board of Conciliation and Investigation. Later in 1941, workers who were reported to be dissatisfied with the recommendations of a Board were forbidden to strike until a strike vote of those concerned had been taken under the supervision of the Department of Labour.

During the 37 years in which the statute has been in effect, up to Mar. 31, 1943, 1,336 applications were received for Boards of Conciliation and Investigation, an average of 36 per year; 719 Boards were established, an average of 19 per year; and, as a result of board procedure, cessation of work was averted or ended in all but 54 cases, an average of less than 2 per year. Principally on account of the extension of the scope of the statute to cover disputes in war industries, more cases were dealt with during the fiscal year 1942-43 than in any previous year. In 1942-43, 146 applications were received for Boards of Conciliation and Investigation, 40 Boards were established and, as a result of board procedure, cessation of work was averted or ended in all but one of these cases. Of the remaining applications, some were still outstanding at the end of the fiscal year. In the majority of the cases, however, settlement was obtained as a result of the intervention of Industrial Disputes Inquiry Commissioners.

**Fair-Wages Policy.**—Wages and hours for work on Dominion Government contracts for construction are regulated under the Fair Wages and Hours of Labour Act, 1935, and by an Order in Council of June 7, 1922, as amended Apr. 9, 1924. Hours on such work are limited to 8 per day and 44 per week and the wages to be paid are those current for the type of work in the district concerned, or, if there are no current rates, fair and reasonable ones as determined by the Minister.

Wages and hours for work on contracts for the manufacture of equipment and supplies for the Government are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934, and by an Order in Council of Oct. 4, 1941. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable wages and may not in any case be less than 35 cents and 25 cents per hour, respectively, for men and women over 18 years. Lower minimum rates are fixed for workers under 18 years of age and for learners.

The Fair-Wages Policy, which was formulated in 1900, is administered by the National War Labour Board (see below).

**Control of Wages.**—This policy is part of the Government's general anti-inflationary program. It was introduced in December, 1940, but at that time, though it was recommended for all employers, it applied only to Boards of Concilia-

tion and Investigation in their recommendations on wages. In October, 1941, when comprehensive price control was introduced, the wages-control policy was amplified and extended to cover all employers and workers.

The present policy is embodied in the Wartime Wages Control Order (Order in Council P.C. 5963, July 10, 1942, as amended). Under this Order, wage rates are stabilized at the level in effect on Nov. 15, 1941, though provision is made for raising rates that are unduly low. At the same time, the imposition of undue hardship on wage-earners is avoided by the payment of a cost-of-living bonus which is adjusted with changes in the cost-of-living index.

A National War Labour Board and nine Regional War Labour Boards have been set up to administer both the Wartime Wages Control Order and the Fair-Wages Policy. The National Board consists of three independent members and it is advised by a committee of employers' and workers' representatives. The Provincial Ministers who are in charge of labour matters are the chairmen of the Regional Boards and the members are employers' and workers' representatives. The inspection staffs of the Unemployment Insurance Commission and of the Provincial Departments are used for enforcement purposes.

**Manpower and Selective Service.**—Manpower policy in Canada as in other countries has developed gradually. At first, the mere absorption of the unemployed into productive work through the normal operation of the labour market was sufficient to meet most manpower requirements. Positive action by the Government soon became necessary, however, and the program has expanded steadily until it now applies to the whole labour force, active and potential, and is designed to secure the most effective distribution of that force both within industry and between industry and the Armed Forces. It is embodied mainly in two sets of regulations: the National Selective Service Civilian and National Selective Service Mobilization Regulations.

All men between the ages of 18½ and 30 and all single men up to 41 are required to undertake military service if they are medically fit. In order to prevent the absorption into the Forces of men needed elsewhere, however, postponement orders may under certain circumstances be granted to men employed in essential industries, seasonal occupations and agriculture. In addition, men who enlist in the Forces or are already serving may be granted leave to return temporarily to industry if they are urgently needed there.

On the purely civilian side, there are two aspects of the policy: control over the movement of workers and direction of certain groups of workers into more essential jobs. The basis of the program is a carefully drafted schedule of labour priorities which shows exactly which establishments should be given first call on available labour in any locality.

Control over the movement of workers is possible because of the fact that, with insignificant exceptions, all employers and workers are required to use the local employment offices. No worker can quit or be released from his job without giving or receiving seven days' notice of separation, a copy of which goes to the local office. Similarly, no employer may interview or engage any worker and no worker may seek or accept employment unless he has a permit from the local office. Except anonymously in the name of Selective Service, employers may not normally advertise for help, and they must requisition all the labour they need from the local employment offices. Moreover, since Sept. 20, 1943, no worker in an establishment with a high labour priority rating has been able to quit or be released from his job without permission.

Considerable numbers of workers have been compelled to leave their jobs and to take essential employment elsewhere. Employers in a long list of civilian industries have been ordered to discharge all men between the ages of 16 and 40 who for medical or other reasons are not in the Armed Forces, and these men have been assigned to essential jobs. Workers who are unemployed for two weeks or more may be directed into any job that is considered suitable. All men between the ages of 18 and 64 who have experience in coal mining and all men in Nova Scotia and New Brunswick who were formerly longshoremen may be directed back to employment in the mines or on the docks as the case may be. Any man between the ages of 16 and 64 may be directed to accept employment in cutting wood fuel, fishing or fish processing. Workers other than the above may be required to report for an interview and may be persuaded, though not compelled, to accept more essential employment.

Special provisions apply to agriculture. No farm worker may seek or accept employment outside agriculture without a permit, except short-term employment in related seasonal industries. Moreover, under agreements between the Dominion and the provinces, farm workers from one province may be moved, either temporarily or for an indefinite period, to provinces where they are more urgently needed. Soldiers, prisoners of war and Japanese are used in farm work, and Mennonites, Doukhobors and conscientious objectors who are relieved from the obligation to undertake military service have been directed into agriculture.

The manpower program is administered by the Director of National Selective Service who is responsible to the Minister of Labour. The Director is advised by a Selective Service Advisory Board which consists of representatives of Government Departments and agencies, industry, and labour. Under him there are several Associate Directors who are in charge of the different aspects of the program, and there are also regional directors who deal with matters that do not have to be referred to Ottawa. Local administration of the civilian side of the program is carried on through Selective Service officers who are stationed in the local Employment and Selective Service offices. These offices are the local offices of the Unemployment Insurance Commission (see p. 712) which, along with the other facilities of the Commission, have been placed at the disposal of the Minister of Labour for the duration of the War for the purposes of Selective Service. The managers of the Commission's local offices are the Selective Service officers. For the administration of the military call-up, the country is divided into 13 divisions in each of which there is a Registrar.

### **Subsection 2.—Provincial Labour Departments**

Labour legislation in Canada is, for the most part, a matter for the provincial legislatures. In each province, except Alberta and Prince Edward Island, there is a special department or bureau charged with the administration of labour laws. The agricultural province of Prince Edward Island has enacted little labour legislation. In Alberta the Department of Trade and Industry administers most labour legislation, the Board of Industrial Relations having charge of statutes regulating wages and hours and factory welfare. In each province legislation for the protection of miners is administered by the department dealing with mines. Factory legislation in eight provinces and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Minimum-wage legislation, except in Prince Edward Island, is administered by a special board which forms part of the Labour Department. Other

statutes administered by some provincial departments include laws for the settlement of industrial disputes, laws to insure freedom of association and promote collective bargaining, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Alberta, Saskatchewan, Ontario, New Brunswick and Nova Scotia, and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon by representatives of employers and employees to be made legal throughout the industry concerned. The Collective Agreement Act in Quebec permits collective agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all the provinces except Prince Edward Island are administered by independent boards.

For information regarding individual Provincial Departments of Labour, reference should be made to the annual reports of the Departments concerned, or to the Deputy Ministers of Labour of the Provincial Governments.

### Subsection 3.—Provincial Labour Legislation, 1942-43\*

The principal provincial measures of interest to labour enacted in 1942 and 1943 dealt with collective bargaining in British Columbia, Ontario and Alberta, and with workmen's compensation benefits in Nova Scotia, Ontario, Alberta and British Columbia. In Alberta and British Columbia provisions of the Mining Acts relating to miners' certificates were modified to meet the shortage of coal miners. In most of the provinces, committees were established to consider post-war planning, including co-operation with the Government of Canada for this purpose.

**Prince Edward Island.**—There were no outstanding developments to report for this Province.

**Nova Scotia.**—Amendments in the Workmen's Compensation Act increased payments to a widow or invalid widower from \$30 to \$40 a month and payments for children from \$7.50 to \$10 or, in the case of orphans, from \$15 to \$20 a month. Maximum total compensation to these dependants was raised from \$60 to \$80 a month. Certain sections of the Coal Mines Regulation Act were revised to permit an increase in the number of miners and a special Act was passed to enable the Lieutenant-Governor in Council to prescribe, for the duration of the War, the qualifications and conditions of supervision for persons employed at the working face.

**New Brunswick.**—The Mining Act was amended to prescribe qualifications for underground foremen and to require additional safety measures. Under the Workmen's Compensation Act, the Board may, in any case of disability, pay a lump sum not exceeding 10 p.e. of impairment of earning capacity, the balance of compensation to be paid periodically. The Employment Agencies Act prohibits the operation of private fee-charging employment agencies. Acts of 1937 governing factories and steam boilers were proclaimed in force from Sept. 1, 1943, and were amended. The Factories Act now forbids, except with written authority from the Minister, the employment of a child under 14 and limits the employment of a woman or young person under 18 to nine hours per day and 54 hours per week. Laundries and dry-cleaning establishments are now covered by the Act.

**Quebec.**—Under the Workmen's Compensation Act the Commission, or the employer, if individually liable, is to be reimbursed by the Provincial Treasurer for all cost of compensation to a blind workman in excess of \$50 if the workman was

\* For a general summary of labour legislation in Canada, see the 1938 Year Book, pp. 787-796.

employed with the approval of a designated institute for the blind. Other changes entitle a workman to the renewal of prosthetic and orthopædic appliances for as long as may be necessary; provide compensation for any industrial disease covered by the Act irrespective of the employment, providing the occupation was the cause of the disease; enable the Commission to establish clinics for workmen exposed to siliceous dust; and add pottery-making to the industries in which pneumoconiosis is presumed to be caused by occupation. Family allowances were added to the provisions of a collective agreement which may be made binding on employers and employees by Order in Council under the Collective Agreement Act. For the first time school attendance was made compulsory for children between 6 and 14 years of age and employment of such a child in school hours forbidden, except on written permit, for more than six weeks in a school year. Provision was made for establishing an Economic Advisory Council and a Commission to prepare a plan of health insurance.

**Ontario.**—The Collective Bargaining Act, 1943, was amended to require an employer to negotiate with the representatives of a collective bargaining agency certified as appropriate by the Labour Court, which is a branch of the High Court of Justice of Ontario. "Collective bargaining agency" means a trade union or association of employees but excludes any association dominated, coerced or improperly influenced by the employer, by financial aid or otherwise. The Act does not apply to farming, domestic service, police, the Hydro-Electric Power Commission of Ontario, or a municipal corporation, school board, or any board or commission established by a municipal corporation under statutory authority except with the express consent of such corporation, board or commission. A collective bargaining agency, which claims to represent a majority of the employees of an employer or a majority of any unit of his employees appropriate for bargaining, may apply to the Court to be certified as such. The Court has power to determine any dispute concerning the appropriate agency, to inquire into any alleged violation of the Act, to restrain any person from continuing such violation, direct the reinstatement of any person discharged from employment and the payment to him of an amount not exceeding his monetary loss, and to make any other order it deems proper. An employer must not discriminate against an employee because of membership or activity in a collective bargaining agency or require as a condition of employment that any person shall abstain from joining or assisting a collective bargaining agency or from exercising his rights under the Act or under a collective agreement. Other sections of the Act stipulate that a collective bargaining agency and its acts are not to be deemed unlawful by reason only that one or more of its objects is in restraint of trade; that an act done by two or more members of a collective bargaining agency, if done in contemplation or furtherance of a trade dispute, is not actionable unless such act would be actionable if done without any agreement or combination; and that a collective bargaining agency may not be made a party to any action nor a collective agreement be made the subject of such action unless this can be done irrespective of the provisions of the Act.

Under the Workmen's Compensation Act maximum average earnings upon which compensation may be based were raised to \$2,500 and compensation to a widow or invalid widower was increased from \$40 to \$45 per month. Compensation to a consort may not be less than \$45 per month or average earnings, if less. Minimum compensation to a consort and one child is now \$55, irrespective of earnings, with a further \$10 to each child up to \$55 per month or earnings, whichever is greater. A workman may now claim compensation for an industrial disease even if the disease is not due to his occupation during the twelve months preceding

disablement. Under the Factory, Shop and Office Building Act, orders for the remedying of dangerous or unhealthy conditions must be carried out within 30 days or within a period fixed by the inspector. The maximum amount of wages that may be recovered by an order of a justice of the peace under the Master and Servant Act was raised from \$100 to \$200.

**Manitoba.**—Changes in the Fair Wage Act, Part I of which applies to public works and private construction works, extended the Act to smaller private works and added laundries and trucking businesses to the industries to which Part II of the Act applies. Minimum wages and maximum hours may be fixed by Order in Council in the industries under Part II if a sufficient proportion of the industry agrees upon the conditions. Hours on duty of drivers of public passenger and goods vehicles were limited to 10 in any 24. An amendment in the Strikes and Lockouts Prevention Act permitted two officers of a union to sign an application for a Board of Conciliation on behalf of employees who are members of the union if they are authorized by a resolution of the employees directly affected, at a meeting of which all had at least three days' notice, or if they are authorized in writing by a majority of the union member employees directly affected. The Workmen's Compensation Act now enables the Board, with the approval of the Lieutenant-Governor in Council, to make arrangements with the Boards of Saskatchewan and Ontario for compensation for industrial diseases to workmen engaged in operations extending across the provincial boundary. The Electricians' Licence Act was brought into conformity with the Code of the Canadian Engineering Standards Association and installation of electrical equipment not approved by the Association was forbidden.

**Saskatchewan.**—The Factories Act was amended to enable the Commissioner of Labour and Public Welfare, subject to regulations of the Lieutenant-Governor in Council, to grant exemption from the provisions of the Act relating to the employment of children, hours of employment of women and young persons, and certain safety and health provisions. Sections dealing with elevators and hoists were repealed following enactment of the Elevator and Hoist Act, 1943, which provided for inspection and fixed 18 years as the minimum age for elevator operators. Amendments in the Steam Boilers Act enabled the Lieutenant-Governor in Council to make regulations governing refrigerating and oxy-acetylene plants, pressure vessels, and the qualifications for welders. The Workmen's Wage Act, which requires the weekly payment of wages in cash or by cheque in the construction industry and in factories and shops, was amended to permit exemptions from these provisions. The Workmen's Compensation Board may now pay compensation in respect of a child up to the age of 18 years if it seems advisable to continue the child's education. A number of additions were made to the schedule of industrial diseases and compensation is provided for frost-bite and for repair or replacement of broken dentures. The Board, with the approval of the Government, may make arrangements with the Boards of Alberta and Manitoba for compensation for industrial diseases for workmen employed in an interprovincial industry.

**Alberta.**—In the Labour Welfare Act, which applies to all employees except farm labourers and domestic servants, a number of sections of the Factories Act were repealed and re-enacted with certain changes, including new provisions to require prompt payment of wages and to enable the Board of Industrial Relations to conduct investigations and make orders relating to working conditions. In the 1943 revision of the Workmen's Compensation Act, compensation to a widow or invalid widower was raised from \$35 to \$40 a month with \$12 a month for each child under

18, instead of payments ranging from \$12 for the first child to \$8 for all children after the third. Benefits to orphan children were increased from \$15 to \$20 a month. A widow or foster-mother now receives a lump sum of \$100. The maximum payment to dependent parents was raised from \$30 to \$35 a month and maximum total compensation to dependants, other than consort or children, from \$65 to \$70 a month. Minimum benefit in total disability cases was increased from \$10 per week or average earnings to \$12.50 a week or average earnings. If disability lasts more than fourteen days compensation is paid from the first day. Appeals from awards of the Board are to be made to a specialist instead of to a medical board. The limit of \$20,000 a year on expenditure for retraining of disabled workmen was removed. The whole cost of medical aid is to be met by assessments against employers and provisions authorizing deductions from wages for this purpose were repealed as of Oct. 31, 1943, in the case of bush work, lumber manufacture and incidental industries, and from Dec. 31, 1943, in all other industries. The Board was given power to establish hospitals and clinics for the treatment and rehabilitation of injured workmen. In 1942 the Order of Railway Conductors in Alberta, the only class of railway workers remaining outside the Act, were brought within its scope at their own request. The Mining Industry Wages Security Act, which was amended and its title changed to Industrial Wages Security Act, now applies only to mines, but lumbering, quarrying, salt mines, works for processing salt, or tar sands or drilling for natural gas or oil may be brought within its scope by Order in Council. Under an amendment in the Industrial Conciliation and Arbitration Act, the trade union or negotiating committee representing the employees may serve upon the employer or employers 48 hours notice of a meeting for the purpose of bargaining, and the employer or employers or their accredited representatives must attend. The Industrial Disputes Investigation Act (Alberta), 1928, was repealed in 1942.

**British Columbia.**—The collective bargaining sections of the Industrial Conciliation and Arbitration Act, 1937, were amended to require an employer to negotiate with the union to which a majority of his employees belong and to forbid an employer to interfere with, or contribute financial or other support to, an employees' organization. As formerly, employees may bargain with their employers through their representatives elected by a majority vote of the employees affected, but if a majority of the employees are members of a trade union (as defined in the legislation) that union has the right to conduct such bargaining on behalf of all employees whether members of the union or not. The Minister of Labour, when notified of the election of bargaining representatives, must notify the employer and the employees or the union, as the case may be, and the employer must bargain with such representatives. Where the parties fail to reach an agreement, the matter may be treated as a "dispute" within the meaning of the Act.

Under amendments in the Workmen's Compensation Act, a widow or foster-mother is to receive a lump sum of \$100. Maximum earnings on which compensation is based were raised to \$2,500 and compensation for children was increased from \$7.50 to \$10 per month for each child under 16 and for each invalid child over that age. For each child attending school between the ages of 16 and 18 years, \$12.50 per month is now payable. Orphans are to receive \$20 per month instead of \$15 to the age of 18, and over that age, if invalids, but this amount is reduced by \$2.50 for any child between 16 and 18 who is able to attend school and is not doing so.

The maximum total payment to a consort and children or to orphan children was raised from \$70 to \$80 a month. Maximum monthly compensation to other dependants was increased from \$30 to \$40, in the case of a parent or parents, or \$55 in all, instead of \$45. Where there are orphan children or a consort without children

and also a dependent parent or parents, payments to the parent or parents are increased from \$30 to \$40 a month, the monthly maximum total to all dependants being raised from \$70 to \$80. A consort, parent or child who is not dependent but has a reasonable expectation of pecuniary benefit from the continuance of the workman's life may be awarded not more than \$40 a month for life or for a shorter period, but not exceeding in all \$1,000. Maximum compensation in total disability cases was increased from \$10 per week or average earnings to \$12.50 per week or average earnings. The Board was given power to make a subsistence allowance of not more than \$2.50 per day to a workman undergoing treatment under its direction at a place other than the one where he resides. In the rehabilitation of injured workmen the Board may spend up to \$75,000. If the contribution by workmen of one cent a day proves insufficient to provide one-half the cost of medical aid, the Board may increase the amount so as to distribute the cost equally between workmen and employers.

In coal mines where not more than 12 men are employed below ground at any one time, the Wartime Coal-mine Employment Act permits the employment of any manager, overman, shiftboss, fireboss, shotlighter or miner whom the Chief Inspector is satisfied is competent. The time limit was removed in the section of the Factories Act giving power to an inspector to permit the employment of a child under 15 for not more than six hours. Sections of the Truck Act requiring wages to be paid in cash or by cheque to workmen employed in, or within a three-mile radius of a city were extended to villages and municipalities. The Apprenticeship Act was amended to lower the minimum age for entry into apprenticeship and for employment in a designated trade to 15 years, bringing it into line with the school-leaving age. A number of new trades were brought under the Trade Schools Act.

**Yukon and Northwest Territories.**—Ordinances of 1943 prohibit the operation of fee-charging employment agencies in both of these Territories. Under the Judicature Ordinance of the Yukon, as amended, wages and salaries are not subject to seizure or attachment, except as to any amount in excess of \$3 per day (less the daily cost of any board supplied by the employer) for the period in respect of which such wages and salaries are owing at the date of service of the summons.

## Section 2.—Occupations of the Gainfully Occupied Population

The total population in gainful occupations is recorded at the census. In Section 15 of Chapter IV, pp. 128-146 of the 1937 Year Book, the gainfully occupied in 1931 are dealt with rather extensively under the heading "Occupations of the Canadian People". A special review of occupations of the Canadian people, based on final figures from the 1941 Census, will be found in Appendix III to this volume.

## Section 3.—Employment and Unemployment

### Subsection 1.—Employment and Unemployment Statistics of the Census

In the 1933 edition of the Year Book, pp. 775-780 are devoted to an examination of the preliminary figures of unemployment as reported at June 1, 1931, for that date and for the preceding twelve months. Tables 24 and 25, at p. 836 of the 1934-35 Year Book, summarizing, by industries, the statistics of those actually un-

employed at the date of the 1931 Census, and of time lost during the twelve months preceding that date. Preliminary figures of unemployment as at June 1, 1941, will be found in Bulletin U-1 of the 1941 Census. Preliminary data of unemployment during the census year will be found in Bulletin E-1 of the Census; these data are now subdivided by counties or census divisions.

### Subsection 2.—Employment and Payrolls as Reported by Employers\*

Monthly statistics, collected for many years by the Dominion Bureau of Statistics, provide up-to-date information respecting the current fluctuations in the employment afforded by establishments, ordinarily employing 15 persons or over, in the following main industrial groups: manufacturing, logging, mining, communications, transportation, construction and maintenance, services (chiefly

hotels and restaurants and laundries and dry-cleaning plants) and trade; commencing with 1940, returns have also been furnished by financial institutions. The more important industries omitted from the monthly surveys are: agriculture, domestic and personal services, and governmental, educational and certain other professional services. The extent of the coverage is indicated by comparison with the figures of the Decennial Census; of the aggregate of 2,631,960 men and women at work in all industries, according to the 1941 Census, 60.4 p.c. were on the staffs of the firms furnishing statistics at June 1, 1941. Approximately 81 p.c. of all those listed in the Census as belonging in the industries covered in the monthly surveys were employed by the establishments co-operating at the census date. Thus the monthly inquiries depict the employment situation currently existing among a very large proportion of the wage-earning population in the Dominion;

\* Revised by Miss M. E. K. Roughsedge, Chief, Employment and Payroll Statistics Branch, Dominion Bureau of Statistics.

the value of the surveys is greatly enhanced by the fact that, since the spring of 1941, information respecting the current earnings of the persons in recorded employment has also been collected.

In 1943, monthly returns were furnished by an average of 13,756 establishments in the eight industries enumerated above, for which records are available since 1920; their employees averaged 1,848,534, while the maximum figure was that of 1,916,588 at Dec. 1. In 1942, the 13,081 firms co-operating in the current surveys had reported an average working force of 1,738,848 men and women. Based on the 1926 average as 100, the index in 1943 was 184.1, or 6 p.c. higher than in 1942, previously the maximum.

During 1943, employment reached unprecedentedly high levels, there being a generally favourable trend in eight of the twelve months; curtailment was indicated in the first two months of the year and again at Apr. 1 and May 1. The extent of the upswing from the latter date, however, was not equal to that reported in the earlier phases of the expansive movement which, dating from the outbreak of hostilities, had received great impetus from the events of the spring and early summer of 1940, climaxed by the collapse of France. Thus, the 1943 index exceeded by 6 p.c. that of 1942, when the figure had been 14.1 p.c. above the 1941 average which in turn had exceeded the 1940 figures by 22.6 p.c. This slowing-down in the rate of acceleration during 1943 is a natural development, in view of the magnitude of the industrial expansion since the beginning of the War, with consequent depletion of the labour market; the reserve of labour has, of course, also been seriously affected by the recruitment of large numbers to the Armed Forces. The latest available information indicates that, by the latter part of 1943, about 867,590 persons were enrolled in the Canadian Army, Navy and Air Force.

The distribution of the men and women more recently added to the wage-earning population has also differed from that indicated in earlier phases. With developing shortages of labour and material, the transfer of workers from the less-essential to the more-essential production and services has assumed increasing importance. In general, the shift has been facilitated by the relatively high earnings of those employed in war plants and in other essential industries and services. In Canada, as in other countries, an important consequence of war-time conditions has been the widespread replacement of men by female workers. Thus at Oct. 1, 1943, women, numbering 510,715, constituted 26.2 p.c. of all those in recorded employment, as compared with 23.5 p.c. at Oct. 1, 1942. In manufacturing, the proportion was higher, at 27.9 p.c. as against 25.7 p.c. a year earlier.

Largely as a result of war-time conditions, the substantial advances in employment recorded since the outbreak of war have been accompanied by relatively greater gains in the current payrolls. During 1943, the average weekly payroll\* distributed by the co-operating employers in the eight leading industries was \$56,903,978; the index of payrolls, based on the June 1, 1941, disbursements of the co-operating firms as 100, averaged 144.9, while the increase in the number in recorded employment in the same comparison was 20.4 p.c. In 1942, the annual index of payrolls was 128.3, and the average number of employees was 13.6 p.c. greater than at June 1, 1941. The main factors contributing to the relatively greater expansion in the salaries and wages than in employment in the period of observation may be summarized as follows: (1) The growing concentration of workers in the heavy manufacturing industries, where rates of pay are above the average, and where,

\* For an explanation of the methods used in tabulating the current payroll statistics, see the "Annual Review of Employment, 1943"; or monthly bulletins on employment and payrolls, published by the Dominion Bureau of Statistics.

in addition, there is a considerable amount of overtime work. (2) The payment of cost-of-living allowances to the majority of workers; the rates at which this bonus has been calculated have been increased on more than one occasion since its institution. (3) The progressive up-grading of employees as they gain experience in their work. In certain cases, higher wage-rates have also been authorized.

In spite of these main factors reacting favourably upon the current payrolls, the average weekly earnings of the typical wage-earner have not shown advances commensurate with those in the index of aggregate payrolls, due to the continued dilution of labour and other factors. Nevertheless, the growth in the average earned income, as indicated in these statistics, has been noteworthy; in the period from June 1, 1941, when the payroll record in its present form was commenced, to Dec. 1, 1943, the per capita average earnings have arisen by 25.2 p.c. The weekly figure in the case of the eight leading industries in 1943 was \$30.78; if finance is included, the mean was \$30.79. These averages considerably exceed those of \$28.56 in the eight leading industries and \$28.61 in the nine industrial divisions, in 1942.

The accompanying chart depicts the general trends of employment and of payrolls in the period from June 1, 1941. The relatively greater rise in the disbursements than in employment is striking; the reasons for the disparity in the

rates of increase have already been given. The occasional interruptions in the generally upward movement in the payrolls have been due, in the main, to losses in working time over holidays, notably at the year-end, and at the Easter season. These factors were reflected also in a lowering of the average weekly earnings of the

typical individual then in recorded employment; apart from these reductions, however, the general trends of aggregate payrolls and of per capita earnings have been steadily upward in the period for which data are available.

The state of full employment now existing is, of course, the direct result of Government expenditures for war purposes, heightened by the demand for commodities resulting, in spite of rigid controls as regards necessities, from the increased purchasing power of wage-earners. As the Governor of the Bank of Canada pointed out, the increase in the national income from \$5 billions in 1938 to \$9 billions in 1942 almost exactly paralleled the rise in all governmental expenditures, viz., from \$1 billion to \$5 billions in the same period. The Governor of the Bank of Canada was careful to observe that, while many would conclude from this experience that full employment can be produced by Government expenditures, this has been accomplished during the war period by high taxation and borrowing and because of the unity of national purpose directed towards the vital goal of winning the War. To maintain full employment, judged by peace-time standards (and it would be neither desirable nor possible to continue indefinitely the present high war-time level) it will be necessary to substitute other objectives—the broad goal being a rising standard of living and a national contribution toward a world economy that will remove the threat of war.

**Employment and Payrolls by Economic Areas.**—Considerably heightened activity was noted during 1943 in all areas. The growth was generally less pronounced than that indicated in 1942 or 1941, but, nevertheless, was fairly substantial in most provinces. The gains over the preceding year ranged from 3.6 p.c. in

Nova Scotia and Ontario, to 15.3 p.c. in British Columbia. Continued large-scale expansion was also shown in the reported payrolls, while the average per capita weekly earnings in all provinces were higher in 1943 than in 1942, when pronounced increases over 1941 had been indicated in the various provinces.

## 2.—Index Numbers of Employment as Reported by Employers in Economic Areas, by Months, 1942 and 1943, with Yearly Averages since 1929

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each economic area to the total reported by all employers making returns in Canada at Dec. 1, 1943. Averages for 1921-23, inclusive, are given at p. 770 of the 1938 Year Book.

**Employment and Payrolls by Cities.**—An interesting development associated with war-time conditions is the relatively greater advance in employment in the eight leading cities for which statistics are segregated, than in the Dominion as a whole. In 1942, there was a rise of 19.3 p.c. over 1941 in the composite index

number for Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver, a gain that compared favourably with the general increase of 14.1 p.c., while in 1943, the increase in the eight cities amounted to 10.3 p.c. over the same period of 1942, whereas the gain in the Dominion as a whole was 6 p.c.

Expanding employment in the leading cities, as elsewhere, has been accompanied by substantial advances in the payrolls disbursed. The current surveys provide little evidence that workers in the more populous centres receive unduly large proportions of the amounts disbursed in salaries and wages by the employers furnishing data. Thus, in 1943, the employees in the above-mentioned cities, constituting 45.9 p.c. of the total number in recorded employment, received 46.8 p.c. of the reported payrolls. The per capita earnings in the eight cities in 1943 averaged \$31.38 per week, as compared with the mean of \$30.78 reported in Canada as a whole; the disparity was surprisingly low, in view of the higher rents and other living costs usually found in the larger centres of population.

Manufacturing in the cities was particularly active during 1942, and there was further important improvement during 1943. It is probable that shortages of labour were chiefly responsible for the fact that employment in certain classes tended to slacken as the year progressed, although activity continued at a high level according to pre-war standards.

### 3.—Index Numbers of Employment as Reported by Employers in Leading Cities, by Months, 1942 and 1943, with Yearly Averages since 1929

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each city to the total reported by all employers making returns in Canada at Dec. 31, 1943. Averages for 1921-28, inclusive, are given at p. 772 of the 1938 Year Book.

**Employment by Industries.**—The expansion in manufacturing resulting from the War has been particularly impressive, recorded employment in this group showing a gain of 104.1 p.c. from Sept. 1, 1939, to Dec. 1, 1943. A considerable proportion of this increase took place in the earlier stages of the War, the rate of acceleration during 1942, and more particularly in 1943, showing a tendency to lessen as available reserves of manpower became depleted. The upward movement was particularly marked in the production of durable goods; that of non-durable goods showed some curtailment in 1943 as compared with 1942, mainly as a result of labour stringencies. Activity nevertheless continued at a high level in almost all classes of manufactures. The gains in employment were accompanied by important expansion in the recorded payrolls, in the period for which these data are available; thus, from June 1, 1941, to Dec. 1, 1943, the index of payrolls in manufacturing rose 74.0 p.c., a proportion greatly exceeding that of 37.4 p.c. in the members employed. Especially noteworthy expansion in the personnel and the payrolls was shown in the iron and steel, electrical apparatus, non-ferrous metal, miscellaneous manufactures and chemical industries, in all of which large proportions of the employees were engaged on war production. However, many other lines of industry were also extremely active, partly as a result of war orders, and partly due to the quickened demand for commodities associated with a state of full employment.

Among the non-manufacturing industries, shortages of labour progressively developing have seriously affected employment in logging, mining and trade, in all of which the level in 1943 was lower than in 1942, although it was generally higher than in pre-war years. Construction and maintenance also showed a falling-off with the completion of contracts for the construction of numerous war plants, and continued shortages of materials and labour for use in normal activities. Transportation was brisk; the volume of employment in communications also continued higher than in immediately preceding years. The payrolls disbursed in these industries have, in most cases, also shown considerable expansion during the period of observation.

#### 4.—Index Numbers of Employment, by Industrial Groups and by Months, 1942 and 1943, with Yearly Averages since 1929

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each industry to the total reported by all employers making returns in Canada at Dec. 31, 1943. Averages for 1921-28, inclusive, are given at p. 773 of the 1938 Year Book.

#### Subsection 3.—Unemployment as Reported by Trade Unions

Monthly statistics on unemployment are compiled and published by the Dominion Department of Labour, based at the present time on returns received from about 2,300 local trade unions, having an aggregate membership of more than 450,000 workers. "Unemployment" means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while unions involved in industrial dis-

putes are excluded from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each month have reference only to the reporting organizations.

### 5.—Percentages of Unemployment in Trade Unions, by Provinces, Half-Yearly, 1931-41, and by Months, 1942 and 1943

NOTE.—For percentages of unemployment at June 30 and Dec. 31 from December, 1915, to December, 1930, see p. 827 of the 1934-35 edition of the Year Book. For data by months from 1921, see successive issues of the Year Book commencing with the 1922-23 edition.

## Section 4.—Unemployment Insurance\*

Unemployment insurance, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations such as agriculture, forestry, fishing, lumbering and logging, transportation by air or water, stevedoring, private domestic service and workers on a contractual basis greater than a week, e.g., monthly or semi-monthly, who earn more than \$2,400 per year (and, except by consent of the Commission, employment in a hospital or charitable institution not carried on for gain). Formerly, no person who received more than \$2,000 per year was covered, but by an amendment to the Unemployment Insurance Act, which came into effect on Sept. 1, 1943, all employees paid on a contractual basis of an hourly, daily, weekly or piece rate (including a mileage rate) are now included in insurable employment regardless of the amount of their earnings, together with all other employees who receive \$2,400 or less per year. This amendment also extends the coverage with regard to public utilities, and makes possible the inclusion of employees of hospitals and charitable institutions.

**Unemployment Insurance Fund.**—Employers and employees contribute amounts that will bring approximately equal totals from each group. A grant amounting to one-fifth of these contributions is added by the Dominion Government, which also assumes the whole cost of administration. From July 1, 1941, to Mar. 31, 1943, employers and employees paid \$93,870,914 into the Fund and the Dominion added \$18,774,183. Reserves of the Fund have been invested in Dominion of Canada Bonds and at the end of the fiscal year Mar. 31, 1943, the par value of these investments amounted to \$104,848,000. The accrued interest was \$1,070,289.

Benefit first became payable on Jan. 27, 1942, and from that date to Mar. 31, 1943, of the 41,419 claims filed at local offices, 37,796 were forwarded to the regional and district offices for adjudication and 17,584 persons were paid benefit, 82,896 benefit cheques were issued and \$743,811 was paid out of the Fund.

**Contributions and Benefit.**—The rates of contribution and benefit are indicated in the following statement.

No benefit is payable during the first nine days of unemployment in a benefit year. After that, the duration of benefit is related to the employment and contribution history of the employee, in that the number of days' benefit is equal to one-fifth the number of contribution days during the previous five years, less one-third the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of four statutory conditions:—

- (1) The payment of not less than 30 weekly (or 180 daily) contributions within two years, while in insured employment.
- (2) Proper presentation of the claim, and proof of unemployment.
- (3) Evidence that the contributor is capable of, and available for work, but unable to obtain suitable employment.
- (4) Proof that the contributor has not refused to attend a course of instruction or training if directed to do so.

Disqualifications for benefit include: loss of work due to a labour dispute in which the contributor is involved; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds;

\* A more complete account of the Unemployment Insurance Act, 1940, and of the administrative machinery set up by it appears in the 1941 Year Book at pp. 665-667 and in the 1942 Year Book at pp. 686-691.

the earning of less than 90 cents per day while in employment. Disallowance of a claim for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct, or leaves his employment voluntarily without just cause.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

Class	Earnings in a Week	Weekly Contributions <sup>1</sup>		Denom-ination of Stamp <sup>2</sup>	Weekly Benefits <sup>3</sup>	
		By Employee	By Employer		Single Person	Person With One or More Dependents
0	Less than 90 cents daily (or under 16 years of age).....	\$ 4	\$ 0.27	\$ 0.27	\$ 4	\$ 4
1	\$5.40 to \$ 7.49.....	0.12	0.21	0.33	4.08	4.80
2	\$ 7.50 to \$ 9.59.....	0.15	0.25	0.40	5.10	6.00
3	\$ 9.60 to \$11.99.....	0.18	0.25	0.43	6.12	7.20
4	\$12.00 to \$14.99.....	0.21	0.25	0.46	7.14	8.40
5	\$15.00 to \$19.99.....	0.24	0.27	0.51	8.16	9.60
6	\$20.00 to \$25.99.....	0.30	0.27	0.57	10.20	12.00
7	\$26.00 or more.....	0.36	0.27	0.63	12.24	14.40

<sup>1</sup> The daily rate of contribution in respect of each class is one-sixth of the weekly rates. <sup>2</sup> Unemployment insurance stamps combine both the employers' and employees' contributions. <sup>3</sup> Rates calculated on assumption that person is in the same class for two years. <sup>4</sup> Daily or weekly benefit for an insured person without dependants is 34 times his average daily or weekly contributions, and 40 times the average employee contribution for married persons mainly or wholly maintaining one or more dependants. <sup>5</sup> Workers in this class make no contributions and are not eligible for benefit. They may, however, accumulate benefit rights on the basis of the employers' contributions.

**Statistics of Unemployment Insurance.\***—In Table 6, the number of persons insured was taken to mean the number to whom an insurance book was issued between April 1 and Aug. 31, 1942, while in 1943 it was interpreted as the number working in insured employment on Apr. 1, as indicated by insurance books renewed and new books issued on that date. The term "insured person" is susceptible to a variety of interpretations, but it is felt that the 1943 figures are especially useful as an indication of employment at a given time.

Table 7 presents information on the persons who established benefit years under the Unemployment Insurance Act during the calendar year 1942. A benefit year is established when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 days' contributions have been made on his behalf. Because of other statutory provisions or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments but means only that the claimant's right to receive benefit at an established rate during the succeeding twelve months is determined. Thus, although 17,179 persons established benefit years in 1942, only 9,912 actually drew benefit.

\* These statistics of unemployment insurance are compiled and published by the Social Analysis Branch of the Dominion Bureau of Statistics.

### 6.—Persons Insured under the Unemployment Insurance Act Classified by Industry and Sex, 1942 and 1943

**Employment Service.**—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint Dominion-Provincial arrangement for more than two decades, were taken over, on Aug. 1, 1941, and added to by the Commission in all provinces except Quebec. The Commission also established offices in Quebec and the Provincial Government thereupon reduced the number of its own offices. (See 1942 Year Book, p. 689.)

# 8.—Applications for Employment, Positions Offered and Placements Effected by Employment Offices, 1932-42, and by Provinces, 1941 and 1942

NOTE.—For figures by provinces from 1920 to 1940, see corresponding table of previous Year Books, commencing with the 1926 edition. Totals for the years 1920-31 are given at p. 766 of the 1938 edition. These statistics were provided by the employment offices of the Employment Service of Canada up to Aug. 1, 1941, and from that date by the Employment and Claims Offices of the Unemployment Insurance Commission.

1942	127,892	62,342	119,020	51,805	77,085	35,601

<sup>1</sup> Prince Edward Island figures are included with those for Nova Scotia, as the Charlottetown office did not commence operations until December, 1941.

**Administrative Organization.**—The Unemployment Insurance Act is administered by a Commission of three members, whose head office is at Ottawa. The field organization consists of five regional offices, four district offices, which perform some of the functions of the regional offices, and over 200 local offices. The last-mentioned, which are now called Employment and Selective Service Offices, are both employment offices and the offices at which insured workers register their claims for benefit when they become unemployed. In addition, they are now also responsible for the local administration of the National Selective Service program (see p. 695). About 250 Inspectors of Insurance Revenue examine insurance books and employers' records to ensure compliance with the Act. The machinery for appeals and references on disputed benefit claims consists of courts of referees and an umpire.

A National Employment Committee and regional and local employment committees provide assistance in regard to the employment service. An Unemployment Insurance Advisory Committee gives advice on questions connected with the insurance side of the Commission's work and also reports annually to Parliament on the financial condition of the Fund.

For further details, see the 1942 Year Book, p. 690.

## Section 5.—War-Emergency Training and Youth-Training Programs, 1942-43

In August, 1942, Parliament passed the Vocational Training Co-ordination Act, which gives authority to carry on any type of training needed in connection with the prosecution of the War, either for tradesmen for the Armed Forces or for workers in industry. The Act also provides for rehabilitation training for persons discharged from the Armed Forces, the continuation of any projects formerly carried on under the Youth Training Act (see p. 694 of the 1942 Year Book), and for training that may be desirable in the post-war period. All projects are carried on by the Dominion Department of Labour in co-operation with the Provincial Governments, but with the Dominion Government bearing practically the entire direct cost of war-emergency training and rehabilitation training.

Under this Act, an Advisory Council of seventeen members was appointed, representing employers, workers, technical education, veterans' and women's organizations, and agriculture. Table 9 shows the allotments of Dominion funds to the provinces for the fiscal year 1942-43, and the claims paid up to Apr. 1, 1943.

**9.—Dominion Allotments and Claims Paid for Youth Training and War-Emergency Training, Fiscal Year 1942-43**

Province	Youth Training		War-Emergency Training	
	Allotment	Claims Paid to Apr. 1, 1943	Allotment	Claims Paid to Apr. 1, 1943
	\$	\$	\$	\$
Prince Edward Island.....	15,000	9,166	Nil	—
Nova Scotia.....	30,000	15,714	270,000	197,034
New Brunswick.....	40,000	24,155	345,000	271,288
Quebec.....	130,000	88,179	1,635,000	1,068,917
Ontario.....	10,000	4,094	3,650,000	2,589,009
Manitoba.....	35,000	11,032	485,000	356,417

British Columbia.....	45,000	37,194	825,000	593,827
<b>Totals.....</b>	<b>420,000</b>	<b>245,525</b>	<b>8,695,000</b>	<b>6,115,260</b>

**Youth Training.**—During the fiscal year 1942-43, 12,521 persons were given training under this program, which consisted for the most part of physical training, training for agriculture and of rural young people, a few projects for urban young women and assistance to university students.

**Student Aid.**—Altogether during the year assistance was given to 2,154 students mainly in the faculties of medicine, dentistry, engineering and science. Assistance was given on the basis of academic merit plus financial need to students who agreed to make their services available for the war effort as required in the capacity for which they had been trained. For the most part, the cost of this assistance was shared equally between each province and the Dominion, but a special Dominion appropriation was available for selected types of students who were not eligible for provincial assistance.

**War-Emergency Training.**—This program (fully described at pp. 694-698 of the 1942 Year Book) was continued during the fiscal year 1942-43, and certain regulations were changed to meet changing conditions. No trainees were accepted in the pre-employment classes who came from farms unless they had permits from National Selective Service, neither were male trainees admitted to classes if they

came within the age groups liable to be called for compulsory military service unless they could produce medical rejection slips. The scale of subsistence allowances paid trainees was increased, ranging from \$7 to \$18 per week.

Continued use was made of vocational shops in the technical schools but additional training centres were opened early in the year. There was a tremendous increase in the enrolment of women in pre-employment classes most of which were of comparatively short duration, i.e., from two weeks to two months. Several new and more specialized types of training were also provided, such as laboratory technicians, industrial chemists, instrument-makers and draughtsmen. Special attention was given to training for the shipyards and many new centres for this type of training were established.

There was no difficulty in finding work for trainees on the completion of their courses, but it became increasingly difficult to secure enough trainees to meet the demand. As the supply of trainees decreased sharply there was a corresponding decrease in the full-time pre-employment classes. This decrease became very marked in the last few months of the fiscal year and certain training centres were closed.

The gross enrolment in full-time pre-employment classes was 20,675 men and 16,067 women, of whom 15,628 men and 12,884 women are known to have been placed in jobs during the year.

#### TRAINING IN INDUSTRY

A new development was the inauguration of plant schools in co-operation with many industries. Men and women were thus given special training in industrial establishments, usually for occupations for which no suitable training could be given in the regular vocational schools. The Department of Labour helped draw up the syllabus and, in some cases, provided instructors in technical subjects. It also reimbursed the employer for the salaries of instructors selected from the working force of the employer and for the usual subsistence allowances to trainees.

During the year 69 plant schools were approved with a gross enrolment of 5,575 men and 5,205 women, of whom 4,204 men and 3,786 women completed their training during the year and were transferred to productive work.

There was a tremendous development in part-time classes carried on for workers employed in war industries with a view to their upgrading and promotion. The bulk of the instruction given was classroom work in technical subjects. The enrolment in these was 19,916.

Another new departure was the training of foremen and supervisors. Through a series of five-day institutes, each covering three distinct courses, trainees were enabled to return to their industries as trainers of other foremen and supervisors. The courses were in job instruction, job relations and job methods. Through the courtesy of the Training within Industry Branch of the United States War Manpower Commission, material for these courses and the services of an instructor were made available to the Department for the first institute.

The total enrolment in the three courses during the year was 20,932.

#### TRAINING FOR THE ARMED FORCES

*Air Force.*—During the year pre-enlistment classes for the Royal Canadian Air Force (see p. 697 of the 1942 Year Book) were greatly extended and placed on a somewhat different basis. Personnel referred to these classes were enlisted by the Air Force with full pay and allowances and the whole program was much more closely and officially linked to the R.C.A.F. The gross enrolment of R.C.A.F. personnel during the year was 25,329.

Pre-aircrew educational classes were held in a number of schools, the course lasting 12 weeks. Instruction was given in English, mathematics, science, aircraft recognition and in the progress of the War. In the technical trades the course lasted from four to six months and included wireless operators (ground), wireless electrical mechanics, radio mechanics, aero-engine mechanics, airframe mechanics, and clerks for the R.C.A.F. Women's Division.

*Army.*—Classes for army tradesmen were considerably reduced from the previous year, the gross enrolment being 13,470. The syllabi were drawn up by the Army and each course lasted three months. Toward the end of the fiscal year, War-Emergency Training was asked by the Army to provide trades training for young soldiers of 17½ years of age. This took the form of a three-month general preliminary course after which the trainees were selected for a ten-month trade training course as electricians, motor mechanics, instrument makers, fitters, draughtsmen or clerk-stenographers.

*Navy.*—Enrolment in the classes of enlisted men for the Navy showed a very marked increase, the gross enrolment being 3,961. The courses of from two to eight months covered training as engine-room artificers, clerks, electrical artificers, motor operators, radio artificers, anti-submarine artificers.

*Rehabilitation Training for Discharged Members of the Forces.*—At the request of the Department of Pensions and National Health, provision was made for vocational training for members discharged from the Armed Forces. Although on a small scale, during the fiscal year 1942-43, training was given in industrial establishments, regular vocational schools, private business colleges and special War-Emergency Training centres. The Department of Pensions and National Health pays the trainees' allowances. The gross enrolment during the year was 1,196 of whom 665 are known to have been placed in employment during the year.

## Section 6.—Organized Labour in Canada

Information concerning the number and membership of trade unions in Canada is published in the annual report of "Labour Organization in Canada" issued by the Department of Labour.

At the close of 1942 there were 578,380 members of trade unions in Canada. The membership of the Trades and Labour Congress of Canada was reported as 230,290 in 1,924 local branches of affiliated unions and federal unions. The membership of the Canadian Congress of Labour was reported as 200,089 in 564 branches; the Confederation of Catholic Workers of Canada, 54,556 in 214 branches; the independent railroad brotherhoods, 32,984 in 359 branches; other central organizations, 47,139 in 284 branches; and independent local units, 13,322 in 81 branches.

*Trades and Labour Congress of Canada.*—The Congress is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions in Ontario and which had met annually from 1873 to 1877, inclusive, there was no central organization until 1883, when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a federal organization which was formally set up in 1886.

Affiliated with the Trades and Labour Congress at the present time are "international" trade unions affiliated with the American Federation of Labor, a number of Canadian or "national" unions and a number of directly chartered federal labour unions.

*Canadian Congress of Labour.*—This Congress was organized in September, 1939, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit affiliation with it of international unions, that is, unions with members in both Canada and the United States. In addition to Canadian unions and international unions, which, in the United States, are affiliated with the Congress of Industrial Organizations, the Canadian Congress of Labour has a number of directly chartered locals.

*Confederation of Catholic Workers of Canada.*—National Catholic Unions in Canada date from 1901. In 1921 these local Catholic syndicates, which are grouped in federations according to industry as far as possible, formed a central organization, the Confederation of Catholic Workers of Canada. Except for a few in Eastern Ontario, these unions are confined to the Province of Quebec.

**Membership by Industries and Trades.**—A classification of union members by industries and trades is shown in Table 11.

**Canada and the International Labour Organization.\***—The International Labour Organization of the League of Nations was set up in 1919 under the Treaties of the Peace to improve labour conditions by international action. It consists of the International Labour Conference, the Governing Body and the International Labour Office. The Conference normally meets annually and is composed of four delegates from each Member State, two representing the government and two representing employers and workers. The Governing Body, which consists of 16 government, 8 employer and 8 worker representatives, is responsible for the administration of the Organization and is in direct charge of the International Labour Office. The Office collects and publishes information and acts as the secretariat of the Conference.

The Office is normally located at Geneva, but because of the War it was moved temporarily to Montreal at the invitation of the Canadian Government. The War has also resulted in the suspension of the annual meetings of the Conference and the quarterly meetings of the Governing Body. A special session of the Conference was held, however, in the fall of 1941 at New York and Washington. In addition, the Joint Maritime Commission, which was established by the Governing Body in 1920, held its twelfth session in June, 1942, and the Office has sponsored several meetings between representatives of Canada and the United States to discuss manpower problems, and has assisted materially in the organization and work of the

\* See also the 1921 Year Book, pp. 607-609; 1922-23, pp. 704-707; and 1924, pp. 666-670.

first Inter-American Conference on Social Security which was held in September, 1942, at Santiago de Chile. The Governing Body has met twice since the outbreak of war and in the intervals its duties have been performed by an Emergency Committee set up in February, 1939, and re-constituted in November, 1941.

The annual Conference has adopted 67 draft conventions and 66 recommendations. The subjects dealt with in these conventions and recommendations and the action of Canada in regard to them are described in the 1941 Year Book at p. 684.

## Section 7.—Industrial Accidents and Workmen's Compensation

### Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903. The data are obtained from provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada and various other governmental authorities; from departmental correspondents; and from press clippings.

#### 13.—Fatal Industrial Accidents in Canada, by Industries, 1940-43

<sup>1</sup> Figures subject to revision.

**Causes of Fatal Accidents.**—The classification of fatal accidents in 1943, by causes, shows that the largest number, 489, came under the category "by moving trains, vehicles, etc.". This includes all accidents caused by cars or engines, including mine and quarry cars, and by automobiles and other power vehicles and horse-drawn vehicles, as well as by moving implements, water craft and civil aircraft.

Next in order were "falls of persons", causing 223 fatalities, with "falling objects" causing 198 fatalities. Other fatalities were: 203 caused by dangerous substances, 43 by hoisting apparatus, 29 by prime movers and 24 by handling of objects. Included in the category "other causes" were 124 fatalities of which 84 were due to industrial disease, strain, etc.

Numbers of industrial accidents, fatal and non-fatal, dealt with by the various provincial Workmen's Compensation Boards, are included in Subsection 2.

**Subsection 2.—Workmen's Compensation\***

In all the provinces, except Prince Edward Island, legislation is in force providing for compensation for personal injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for less than a stated number of days. To ensure payment of such compensation, each Act provides for an accident fund, administered by a provincial board, to which employers are required to contribute at a rate determined by the board, in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. There is also a Dominion Act that provides for compensation for accidents to Dominion Government employees according to the conditions laid down by the Act of the province in which the accident occurs. In Prince Edward Island, where there is no provincial workmen's compensation Act in effect, compensation is paid to Dominion Government employees according to the provisions of the New Brunswick Act.

Necessary medical aid is given to workmen during disability, except in Nova Scotia where it is provided for thirty days only, unless the Board extends this period. In British Columbia, workmen contribute to the cost of medical aid; elsewhere it is borne by the Accident Fund. Where the employer is individually liable for compensation, he must also furnish medical aid.

Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus. In all, except New Brunswick, silicosis is compensated under certain conditions. The other diseases compensated vary according to the industries of the provinces.

*Scope of the Acts.*—The Acts vary in scope, but, in general, they cover construction, mining, manufacturing, lumbering, fishing, transportation and communication and the operation of public utilities; undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia. Nova Scotia requires persons employing men in fishing and dredging to carry insurance. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation, as determined by the Board, and pay a proportion of the expenses of administration.

*Benefits.*—Under each Act, a fixed period must elapse between the date of the accident and the date when compensation begins but in all cases medical aid is given from the date of the accident. This waiting period varies from three to seven days and in some provinces compensation is paid for the waiting period, if disability continues beyond it.

At present, compensation in fatal cases is paid as follows:—

Burial expenses, \$100 in Nova Scotia and New Brunswick, \$150 in Manitoba and \$125 in the other provinces. In certain cases costs of transporting the body are also allowed.

To a widow or invalid widower, or to a foster-mother as long as the children are under the age limit, a monthly payment in New Brunswick of \$30, in Ontario of \$45, and in the remaining provinces \$40; in addition a lump sum of \$100 is paid in New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, and British Columbia.

\* Fuller information concerning the provincial Workmen's Compensation Acts is given in a pamphlet issued annually by the Department of Labour of Canada.

For each child in the care of a parent or foster-mother receiving compensation, a monthly payment of \$10 in New Brunswick, Nova Scotia, Quebec, Ontario, Saskatchewan and British Columbia, but in the latter province \$12.50 is paid to children between 16 and 18 years of age attending school; in Manitoba \$12 for the eldest child, \$10 for the second, \$9 for the third, and \$8 for each additional child; in Alberta \$12 for each child. To each orphan child \$20 per month is paid in Nova Scotia, Alberta and British Columbia and \$15 in the other provinces with a maximum of \$80 per month to one family in Nova Scotia and British Columbia.

Except in the case of invalids, payments to children are not continued beyond the age of 16 in Nova Scotia, Ontario, Manitoba and Saskatchewan, 18 in Quebec, Alberta and British Columbia, and 16 for boys and 18 for girls in New Brunswick. In Manitoba, Ontario, Saskatchewan and British Columbia payments for children may be made up to the age of 18 if it is desirable to continue their education. In British Columbia and Manitoba payments to invalid children are continued until recovery, while the other provinces make payments only for the length of time the Boards consider that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly sum to be paid to all such dependants is limited to \$40 in Manitoba, \$70 in Alberta, \$45 in Nova Scotia and \$55 in British Columbia. In British Columbia, however, if there are also dependants such as widow, invalid widower or children the maximum payable to other dependants is \$40 per month. In all provinces compensation to dependants, other than consort or children, is continued only for such time as the Boards consider that the workman would have contributed to their support.

Except in New Brunswick, Alberta and British Columbia, maximum benefits payable to dependants in case of death of the workman are two-thirds of the earnings: in New Brunswick 60 p.c. of earnings. The minimum payable to a consort and one child in Quebec is \$50 per month or \$12.50 per week if there is more than one child; in Manitoba and Saskatchewan the minimum is \$12.50 per week (\$15 per week in Manitoba—if there is more than one child). In Ontario the minimum for a consort and one child is \$55 per month irrespective of the workman's earnings with an additional \$10 per month for each additional child unless the total compensation exceeds the workman's average earnings in which case compensation is an amount equal to such earnings or \$55, whichever is greater.

The rate for permanent total disablement in all provinces, except New Brunswick, is a weekly payment for its duration equal to 66⅔ p.c. of the average weekly earnings; in New Brunswick it is 60 p.c. As in fatal cases, the Acts fix a minimum weekly sum that must be paid unless earnings fall below that minimum, in which case a sum equal to the earnings is paid.\* This minimum is \$8 in Nova Scotia and New Brunswick; \$12.50 in Alberta, Quebec, Ontario, Saskatchewan and British Columbia, and \$15 in Manitoba. For permanent partial disablement similar provision is made in all the provinces, except New Brunswick and Alberta, i.e., two-thirds of the difference in earnings before and after the accident. In New Brunswick and Alberta, the amount is determined by the Board according to the impairment of earning capacity. In Nova Scotia, if there is little or no difference, in New Brunswick in any case, or in the other provinces if the difference is 10 p.c. or less, a lump sum may be given. In New Brunswick, 60 p.c. of the diminution of earnings, is payable for temporary partial disablement.

\* In Ontario when average earnings are below \$12.50 per week, 100 p.c. of earnings is paid. In Saskatchewan, when average earnings are below the minimum, an arbitrary rate of \$9 for those over 21, and of \$6 for those under 21, is paid.

The average earnings on which compensation is based must be computed in the manner best calculated to give the rate per week or per month at which the worker was remunerated but are not to exceed \$1,500 a year in Nova Scotia and New Brunswick, \$2,500 in British Columbia and Ontario, and \$2,000 in the other provinces. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. The rate of compensation of workmen under 21 may be later increased if it is probable that their earning power, had the injury not occurred, would have increased.

The statistics of workmen's compensation, published by the provincial boards, are not on a comparable basis and are therefore presented as a series of tables.

## Section 8.—Strikes and Lockouts

Statistics of strikes and lockouts in Canada have been collected by the Dominion Department of Labour since its establishment in 1900.

The items in the columns headed "Time Loss in Man-Working Days" in Tables 22 and 23, were calculated by multiplying the number of persons directly involved in strikes and lockouts by the number of working days they were so affected during the time the disputes were in existence.

Summary tables of the figures with details as to strikes and lockouts during 1942 will be found in the *Labour Gazette* for July, 1943, pp. 949-981, and for 1943 in the March, 1944, issue, p. 320-353.

**Strikes and Lockouts in Recent Years.**—For the period 1926 to 1930 the average number of strikes and lockouts per year was 81, the average number of employees affected per year was 18,086, and the average time loss per year was 177,450 man-working days. For the period 1931 to 1937, all the above averages showed a substantial increase. In 1938 the number of workers and the time loss were about the same as the average for the period 1926-30, but from 1939 to 1943, there were substantial increases.

Since 1931 most of the important strikes have been in textile and clothing manufacturing, logging, sawmilling and wood-working industries, with a substantial number in coal-mining, but in 1942 and in 1943, strikes in the mining and metal manufacturing industries caused more than two-thirds of the time loss. Nineteen of the largest strikes, or less than 5 p.c. of the total number, caused 76 p.c. of the total time loss during 1943. One strike of aircraft workers in Montreal caused about one-fifth of the total time loss.

### 22.—Strikes and Lockouts, 1931-43, with Totals for 1901-30

<sup>1</sup> None reported.<sup>2</sup> Includes non-ferrous smelting.<sup>3</sup> Includes erection of all large bridges.<sup>4</sup> No strikes prior to 1943.<sup>5</sup> Includes water service.<sup>6</sup> Total includes two protest strikes in

Nova Scotia which involved the workers of more than one industry.

**Causes and Results of Strikes and Lockouts.**—In each of the years since the record was begun in 1901, by far the most important cause of strikes has been the demand for changes in wages but, since 1936, union questions (chiefly union recognition, the discharge of workers for union activity or membership, the employment of union members only) have caused many strikes resulting in a large proportion of the time loss.

During 1942 and 1943 more strikes resulted from questions involving demands for increases in wages than from any other cause. In 1942 these strikes involved, also, a larger number of workers and resulted in a greater time loss than resulted from any other cause, but in 1943 "other causes affecting wages and working conditions" resulted in strikes involving more workers in a greater loss of time than resulted from demands for increases in wages. Union questions caused less than 20 p.c. of the strikes in 1943.

Since 1935, the proportion of strikes and lockouts settled by conciliation has increased. Up to that time about half were settled by direct negotiations of the parties involved. Conciliation was an important factor in the settlement of 36 p.c. of the strikes in 1942, and direct negotiations in 32 p.c. In 1943 conciliation was a factor in the settlement of about 45 p.c. of the strikes and direct negotiations in 25 p.c. In both 1942 and 1943 most of the strikes involving demands for increases in wages were finally settled by reference to National or Regional War Labour Boards following the resumption of work.

## Section 9.—Wage Rates and Earnings

### Subsection 1.—Wage Rates and Hours for Various Classes of Labour in Canada\*

Statistics of rates of wages and hours of labour have been collected for recent years by the Dominion Department of Labour, and published in a series of bulletins supplementary to the *Labour Gazette*; Report No. 1 of this series was issued in March, 1921. The records upon which the statistics are based begin in most cases with the year 1901. Index numbers have been calculated to show the general movement of wage rates. The series published until 1940 was on the base of rates in the year 1913 as 100. A new series with four additional industries was constructed on the base of 1935-39 as 100, to correspond with the new cost-of-living index on the same base, and appeared in a supplement to the *Labour Gazette* for April, 1941. A complete table of index numbers, together with details as to its compilation, has been given in the annual reports on "Wages and Hours of Labour in Canada" issued by the Department of Labour. Statistics on the new base were first published in the Year Book at p. 697 of the 1941 edition. Table 24 gives the figures for 10 of the 13 groups of occupations from 1921 to 1942. The general average index includes the three groups not included in that table; figures for these three groups extend back as follows: steamships, 1901; laundries, 1931; and telephones, 1920.

From 1930 to 1933 there was a general decrease in wage rates but several groups showed increases in 1934 and increases were general in each year since that time averaging 3 p.c. in 1940 and 10 p.c. in 1941; a further increase of 7 p.c. occurred in 1942. Some of the increases in 1940 and many of those in 1941 and 1942 were made in the form of a cost-of-living bonus to be adjusted from time to time according to the official cost-of-living index number.

The work of collecting and compiling wage statistics was transferred early in 1942 from the Statistics Branch of the Department of Labour to the National War Labour Board. No report on wages and hours of labour has been published by the Board but the index numbers for 1942 have been calculated and are shown in Table 24.

\* See pp. 774-783 of the 1927-28 Year Book for an article on the "Wages Statistics of the Census of 1921" and pp. 797-799 of the 1933 Year Book for "Earnings in the Census Year 1931".

## 24.—Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1921-42

(1935-39=100)

NOTE.—For 1941 and 1942 rates include cost-of-living bonus. Figures for the years 1901 to 1920 will be found at p. 711 of the 1942 Year Book.

**Wages of Farm Labour.**—Current rates of wages paid to male hired help on farms have more than doubled since 1940, the year in which the series of wage rates shown in Table 26 was begun. Average wage rates are shown on the basis of rates paid with board provided by the employer and without board. The information is provided by farm correspondents located in all provinces. Although rates of wages during the winter period are normally somewhat lower than those paid during the harvesting season, wage rates at Jan. 15, and also at May 15, rose sharply in all provinces during the period under review.

### Subsection 2.—Earnings in the Census Years 1931 and 1941

A table at p. 789 of the 1937 Year Book gives statistics of wage-earners, by sex, and their earnings, for the census years 1911, 1921 and 1931. Certain preliminary figures on earnings of wage-earners during the twelve months ended June 2, 1941, are given in Bulletin E-1 of the 1941 Census. These data are, for the first time, subdivided by counties.

### Section 10.—The Regulation of Wages and Hours of Labour

Except as an emergency measure the regulation of wages and hours of persons in private employment in Canada is within provincial jurisdiction, and all the provinces, except Prince Edward Island, have legislation on the subject.

In Nova Scotia, the minimum wage law applies only to women, while in Ontario, though the Act applies to both sexes, there is only one order (relating to the textile industry) which applies to men. In Alberta and British Columbia, separate orders are issued for men and women, and in the other provinces all orders apply to both sexes in so far as workers of both sexes are employed in the industries covered.

In Quebec, under the Collective Agreement Act, hours and wages established through collective agreements have been generalized by Orders in Council in given districts or throughout the Province. The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta and Part II of the Manitoba Fair Wage Act provide that schedules of wages and hours drawn up by conferences of employers and employees called by the Minister of Labour may be made binding on all employers and employed in the industries concerned. In Nova Scotia, New Brunswick and Manitoba, however, the Acts can be applied only to specified industries.

Hours are regulated in all provinces, except Prince Edward Island, by statutes governing working conditions in special classes of undertakings such as mines, factories and shops. In Nova Scotia, Quebec, Alberta and British Columbia, there are also statutes dealing only with hours of work, and most of the Minimum Wage Acts give the administrative authorities power to regulate hours as well as wages.

The following subsections summarize the provisions relating to wages and hours. Details may be found in the annual report on Wages and Hours of Labour in Canada, which is published as a supplement to the *Labour Gazette*.

#### Subsection 1.—Minimum Wages

The rates that were in effect under provincial minimum wage legislation at the end of 1941 are summarized in the 1942 Year Book, pp. 714-716. The changes made since then are as follows:—

In Nova Scotia, rates of \$12 per week in Halifax, Sydney and Glace Bay and \$11 in all other incorporated towns were fixed in 1943 for women employed in garages, gasoline stations, theatres and other amusement places.

In New Brunswick in 1942, hourly rates of 25 cents for men and 15 cents for women and boys were established for workers in canneries in northeastern counties and in establishments in the same counties manufacturing or repairing equipment for canneries or fishing. Rates for lumbering were raised and the average may not now fall below \$3.50 per day plus board for summer operations and \$52 per month plus board for winter operations.

In Manitoba, the rate in hotels and restaurants in Winnipeg and other cities and towns was raised in 1942 to \$13 per week.

In Alberta, rates were established in 1942 for male and female workers in meat, fish, fruit and vegetable canneries (40 to 50 cents per hour for men and 25 to 35 cents for women) and for women employed in greenhouses (\$12.50 per week).

Table 27 indicates the rates at present in effect for several important occupations in the principal cities of each of the various provinces. In Alberta and British Columbia the rates shown for Edmonton and Vancouver apply on a province-wide basis. In other provinces lower rates than those shown for the principal city are in effect in all or part of the remainder of the province. For further details, see the 1942 Year Book, pp. 714-716.

<sup>1</sup> Applies to females only. In Alberta, however, there is a general minimum of 33½ cents per hour for a 9-hour day and 54-hour week for male workers over 19 in all occupations. In British Columbia minimum rates have been set for men in shops and certain types of factories.

<sup>2</sup> Except in offices where they apply to a 48-hour week and in theatres and amusement places where they apply to an 8-hour day and 48-hour week. In factories, laundries, shops, hotels and restaurants, beauty parlours and telephone companies, the rates apply to the normal work-week if that is less than 44 hours.

<sup>3</sup> 44 in offices, for factories, except in certain specified cases, offices and telephone operators; 54 for shops, beauty parlours, theatres and women in laundries; 60 for hotels; and 43-60 for elevator operators.

<sup>4</sup> In shops, beauty parlours and hotels they apply to 40 hours or more, in theatres and amusement places to 40 hours and for office workers and elevator operators to 37½ hours.

<sup>5</sup> Hourly rates. <sup>6</sup> Only in offices connected with factories, laundries, garages, paint shops and fuel and lumber yards; \$14 in offices connected with warehouses and cartage establishments; no rates set for other offices.

<sup>7</sup> Applies only to elevator operators in hotels, for whom the minimum rate applies to 60 hours.

<sup>8</sup> Applies to men also.

**Subsection 2.—Wages and Hours under Quebec Collective Agreement Act, Industrial Standards Acts of Other Provinces and Manitoba Fair Wage Act**

The Collective Agreement Act of Quebec provides that collective agreements voluntarily agreed upon by representatives of employers and trade unions or groups of employees may be submitted to the Minister of Labour, and if, in his opinion, the terms of an agreement that relate to wages, hours and apprenticeship determine these conditions for a preponderant proportion of the industry, they may, by Order in Council, be made compulsory for the industry affected in a certain district or throughout the Province. Enforcement is carried out through joint committees of employers and the trade unions within the industry.

The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta each provide that, following a petition either from employers or employees in an industry in a particular area or throughout the Province, the Minister of Labour for that Province or a person delegated by him, may call a conference of representatives of employers and employees, at which a schedule of wages and hours for the industry, in the area specified, may be agreed upon. Such a schedule, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in a designated zone. The Minister may also establish an advisory committee, on which employers and employees are represented, to assist in carrying out the provisions of the schedule. The administration of the statute and the enforcement of the schedules approved under it, in each of these Provinces, are under a provincial board or a government official. The Nova Scotia Act applies only to construction in Halifax and Dartmouth and the New Brunswick Act to construction work exceeding \$25 in value and to work on motor-vehicles.

Under Part II of the Manitoba Fair Wage Act, the Minister may take the initiative and authorize the provincial Fair Wage Board or a special board to inquire into labour conditions in an industry within Part II and to call a conference of employers and employed to draw up a schedule of wages and hours for the industry. On submission of the schedule by the Board to the Minister, he may recommend that it be applied by Order in Council to the whole industry in the district concerned. Part II applies to barbering and hairdressing, printing and engraving, shoe-repairing, wood-sawing, baking, laundering and dry cleaning, road trucking and hauling, and any other industry brought within its scope by Order in Council.

A list of the industries and occupations governed by Orders in Council under the above Acts at the end of 1939 was published in the 1940 Year Book, p. 793, and subsequent changes are to be found in the 1941 Year Book, p. 703 and the 1942 Year Book, p. 716. In 1942, all remaining New Brunswick schedules expired; the agreement for bakers at Hull, Que., was rescinded; a schedule for hairdressers at Winnipeg, Man., was added.

### **Subsection 3.—Regulation of Hours**

The limitations on hours which are imposed by statute or under statutory authority are summarized in the Canada Year Book, 1942, pp. 717-718. This summary is still up-to-date in all respects.

# CHAPTER XXI.—POST-WAR RECONSTRUCTION AND THE REHABILITATION OF EX-SERVICE PERSONNEL

## CONSPECTUS

<b>Part II.—The Administrative Machinery for the Rehabilitation of Ex-Service Personnel.....</b>	<b>755</b>	SECTION 5. THE TREATMENT OF WOUNDED AND SICK VETERANS.....	772
		SECTION 6. RETURNED SOLDIERS' INSURANCE.....	775

As early as December, 1939, the Government set up a special Cabinet Committee on Demobilization and Re-establishment "to procure information respecting, and give full consideration to and report regarding, the problems which will arise from the demobilization and discharge from time to time of members of the Forces . . . and rehabilitation of such members into civil life". Thus, before the War was many months old, the economic problems associated with the waging of all-out warfare and the subsequent peace were anticipated so far as it was possible to foresee them. In February, 1941, the terms of reference of this Cabinet Committee were broadened to include all phases of reconstruction as they had been shown to be necessary with the development of the War. At still later dates the direction of all reconstruction studies was placed under the Prime Minister as President of the Privy Council.

The terms of reference of the several advisory committees, set up between 1940 and 1943 to study and report on particular phases of the problems involved, point to the interlocking nature of the subjects of demobilization and rehabilitation of the Armed Forces, demobilization of war industry, and economic post-war reconstruction generally. The problems connected with the rehabilitation of ex-service men are a part of the general question of post-war reconstruction for demobilization and rehabilitation plans alone do nothing to insure that there will be jobs awaiting the returned men on discharge. It is at this very point that post-war reconstruction ties in with rehabilitation plans.

For these reasons this chapter is planned to cover the whole subject but is separated into two distinct Parts: Part I is all-comprehensive, dealing with the entire field of post-war reconstruction including plans for demobilization and rehabilitation in their relationship to reconstruction generally and in so far as exploration and study have been undertaken by the Dominion and Provincial Governments. Part II is restricted to the nation-wide administrative machinery that the Dominion Government has set up over the period of the past few years and which is now functioning and dealing with all manner of problems concerned with veterans' affairs. In this

respect the experience and machinery of the War of 1914-18 was ready to hand and upon that foundation Canada has planned a very comprehensive program and erected an organization for dealing efficiently with ex-service personnel that ranks with that of any other country.

## **PART I.—THE EXPLORATION OF THE FIELD BY THE DOMINION AND PROVINCIAL GOVERNMENTS\***

### **Section 1.—Dominion Government Machinery for Surveying the Field**

Parliamentary and other committees set up to explore and advise the Government on matters of reconstruction and re-establishment are:—

- (1) The Senate Committee of which the Chairman is Senator Norman P. Lambert.
- (2) The House of Commons Committee, which has popularly come to be known as the 'Turgeon Committee' after its Chairman, J. G. Turgeon, Member for Cariboo, B.C.
- (3) The following advisory committees reporting to the special Cabinet Committee (described at p. 737) or otherwise: (a) the Advisory Committee on Demobilization and Re-establishment; (b) the Advisory Committee on Economic Policy; and (c) the Advisory Committee on Reconstruction.

#### **The Senate Committee on Economic Re-Establishment and Social Security**

This Committee was established on Mar. 5, 1943, and has held meetings from time to time since that date. The Order of Appointments defines its functions as: to consider and report upon matters arising from post-war conditions, particularly those relating to problems of reconstruction and re-establishment and a national scheme of social and health insurance. The method of procedure is to hear and discuss reports from leading manufacturers, research workers, the chairmen of the various advisory committees established to study specific phases of reconstruction and other bodies.

On July 13, 1943, just before the summer adjournment of Parliament, the Chairman of the Senate's Special Committee reported progress to his Chamber and recommended that at the beginning of the next session of Parliament it should be re-appointed to continue the inquiry. It was pointed out in that report that 13 meetings of the Committee had been held, 3 of them being joint sessions with the Special Committee of the House of Commons, and that 22 witnesses had been heard. Several additional witnesses representing industry and social services who were concerned in meeting post-war conditions as effectively as possible, and whom the Senate Committee was desirous of hearing, expressed a desire to defer the giving of their evidence until later.

In the course of the debate on the Speech from the Throne in the new session of Parliament which opened on Jan. 27, 1944, Senator Lambert speaking in the Senate on Feb. 4, referred again to the work of the Special Committee of which he had been chairman in the previous year. He said that the work of both parliamentary committees dealing with economic rehabilitation and social security during

\* Based on material and information supplied by the Secretaries of the various Committees and, so far as Provincial Government programs (Section 3) are concerned, by the Wartime Information Board.

the previous session "has served to focus public opinion upon the whole problem of post-war reconstruction"; and further that "the contents from the Speech from the Throne may be taken as a sequel to efforts put forth" by these Committees.

### **The House of Commons Committee on Reconstruction and Re-Establishment**

This Committee was originally established by a Resolution passed in the House of Commons on Mar. 24, 1942, "that a select committee of the House be appointed to study and report upon the general problems of reconstruction and re-establishment which may arise at the termination of the present war, and all questions pertaining thereto; with power to such select committee to appoint from among the members of the committee, such sub-committees as may be deemed advisable or necessary, to deal with specific phases of the problems aforementioned, with power . . . to call for persons, papers, and records, to examine witnesses under oath and . . . to report from time to time to the House; . . .". Authority for the continuance of this Committee has been renewed by the House of Commons each year.

**Procedure.**—The House of Commons Committee has held meetings continuously from Mar. 24, 1942, to date and has presented reports each year to the House. Minutes of Proceedings and Evidence are published as House of Commons Sessional Papers and are available through the King's Printer. The procedure takes the form of statements before the Committee by leaders in industry and other witnesses called to report in their respective fields and to answer questions put by the Committee members regarding the subject matter of such statements. Four Provincial Governments have already presented briefs to the Committee. The evidence is then used to formulate specific recommendations to Parliament. The Sessional Papers, therefore, take the form of "Minutes of Proceedings and Evidence" reported verbatim at the meetings.

**Recommendations.**—Four reports have so far (February, 1944) been submitted by the House of Commons Committee to the House: The First and Third were routine reports which require no comment, the Second Report dated June 23, 1943, (Paper No. 23 Session of 1943) emphasizes the following points:—

(1) That creation of employment is the most immediate reconstruction problem of post-war Canada. This concerns the proper utilization of natural resources through flood control, irrigation reservation, conservation of water, exploration of mineral and oil deposits, development of water powers and the provision of highway and railway transportation as required by settlers and industry.

(2) That a Department under ministerial responsibility should be established to carry out the various tasks of reconstruction.

(3) That certain action can and ought to be taken at once: other matters will from their nature have to wait until after the War. Inventories of positively known resources and proper surveys of the others should be undertaken immediately with the objects defined under (1) above in order to bring about a better balance of the Canadian economy.

(4) That re-housing is an absolute post-war necessity. Authority should be taken by the Government to finance better homes for the people living under unhealthy slum conditions.

(5) That the Prairie Farm Rehabilitation Act, if applied to the whole of Canada, would greatly improve Canada's agricultural life and that the Act be amended accordingly.

(6) That in many ways new relationships between government and industry and, within industry, between management and labour must be built up.

(7) That every member of the Armed Forces and the Merchant Navy is entitled to assurance that Parliament and the Government will be prepared to do everything within their power to prevent any recurrence of mass unemployment.

The Fourth Report, dated Jan. 26, 1944, (Paper No. 37 Session of 1943) added to the above features, which were re-emphasized, the following recommendations:—

(1) That preferences in Federal Government works projects and industries furnishing supplies be given to members of the Armed Forces and Merchant Navy and, wherever possible, be granted by the Employment Service of Canada.

(2) That the following special recommendations directed to bringing about improvement in the economic life of the people of the Maritime Provinces be considered:—

(a) Improvements designed to make communications between Prince Edward Island and the mainland constant, reliable and adequate.

(b) Improvements of transportation across the Straits of Canso by the construction of a causeway or other means.

(c) Regrading, realigning and double tracking of the C.N.R. from Sydney to places in Nova Scotia and New Brunswick.

(3) That the following concrete recommendations be considered in relation to transportation in Canada generally:—

(a) That as soon as possible after the War a first-class permanent all-season highway be constructed right across Canada, which will be connected through points in every province with the United States highway system and with all national and provincial parks, the Alaskan Highway and the Fort Norman oil fields.

(b) That when the War is over there should be a resumption of the Federal-Provincial arrangements which brought about construction of roads in remote mineral areas and that the enabling legislation be extended to cover the proper utilization of other natural resources.

(c) That the Peace River country of British Columbia and Alberta be given direct railway connection with the Pacific Coast with the least possible delay. (A statement of the Rehabilitation Council lays down the belief that, failing any satisfactory arrangement with the Federal Government, the Provincial Government should undertake the extension of the Pacific Great Eastern Railway to the Peace River as a post-war development measure.)\*

(4) That agricultural, industrial, mineral and transportation surveys be made in the northern and northwestern portions of Canada to prepare properly for the development of those areas.

(5) That in the field of agriculture, while the Veterans Land Act is a preparation of the way and an encouragement for the placing of men of the Armed Forces, who want to return to agricultural life, on farms, very much more must be done. The question of markets, domestic and international, should receive immediate and constant study. Increased production through chemical research should be followed up. The relationship of agriculture to secondary industry must be changed and improved.

\* Record No. 35, Proceedings of the House of Commons Special Committee on Reconstruction and Re-establishment, 1943, p. 1074.

(6) That all possible co-operation should be encouraged with Provincial Governments in the planning and installation of rural electrification as a means of improving the social and economic life of the farming population; that extended credit facilities—possibly through extension of the Credit Union system—should be provided and that the Co-operative Movement should be encouraged.

(7) That the coal and petroleum situation in Canada demands positive study and it is urged that the Government spare no effort in proving the Athabasca tar sands and testing Canada's vast coal resources for further economic uses.

(8) That serious thought be given to the preservation of forests on the eastern slope of the Rocky Mountains in order to conserve the water resources of the Prairie Provinces.

(9) That reforestation and afforestation be given serious study in co-operation with the Provincial Governments.

(10) That the Federal Government in co-operation with the Provincial Governments and the railway companies take positive steps to eliminate level crossings as early as possible.

In presenting these reports, the Chairman emphasized that the House of Commons Committee submitted them for the purpose of placing before the Government positive suggestions and stated that only a small part of its great task of surveying the entire field had been done.

### Special Advisory Committees

**The Advisory Committee on Demobilization and Re-establishment.**—Under the Cabinet Committee on Demobilization and Re-establishment established in December, 1939, (see p. 737) a General Advisory Committee on Demobilization and Re-establishment was set up under Order in Council P.C. 5421 of Aug. 10, 1940, composed of ranking civil servants who represented the Departments of Government directly or indirectly concerned. This Committee was among the earliest to be set up to investigate and study under the reconstruction machinery of the Cabinet Committee. The Chairman of the Canadian Pension Commission was appointed Chairman of this Committee and the Associate Deputy Minister of Pensions, Vice Chairman. It was out of this Committee, as its field of effort developed, that the Advisory Committee on Reconstruction (see p. 743) grew.

The terms of reference of this Committee were: to act as the agency among various Government Departments in matters of demobilization and rehabilitation and to bring before the Cabinet Committee recommendations for legislation in respect of these matters.

*Procedure and Action to March, 1944.*—Because of the circumstances under which this Committee operated and because there was a legacy of administrative machinery from the War of 1914-18 upon which experience its recommendations could be based, it was possible for such recommendations to be translated directly into legislation. The obvious need for this policy existed since men, demobilized from the Forces from the earliest days of the present war, had to be adequately provided for and placed in civil life immediately. Sub-committees studied individual matters of employment of returned men, discharge pay, administration of special funds, retraining of certain casualties, demobilization, land settlement, priorities and methods, and returned soldiers' insurance and adequate emphasis was given to the

special problems of discharged women. Part II of this chapter outlines the administrative machinery that has resulted from the legislation framed on the recommendation of the Committee.

On Sept. 25, 1943, the Committee presented a report outlining its organization and the action taken by the Government as a result of its several recommendations. This report has not been printed but it was submitted in mimeograph form to the Minister of Pensions and National Health in his capacity of Convener of the Cabinet Committee. In respect to the Sub-Committee on Employment, the recommendations in many ways tie in with those of other Government committees: their implementation concerns the broader field of economic reconstruction generally and, therefore, they were not subjects of immediate legislation. For these reasons they are summarized here:—

(1) Preference in employment should be accorded to ex-service men of the present war, particularly those who have served overseas, and in carrying out the recommendation:—

- (a) Due weight should be given to the record of service-training in establishing qualifications for civil life.
- (b) Preference now accorded veterans in respect of employment originating through Dominion Government contracts should be continued and enlarged for the demobilization period, especially for those who have served overseas during the present war. An effort should be made to have Provincial and Municipal Governments provide similar preferences.
- (c) The organization of communities, citizens' committees, and employer and trade union groups should be encouraged to assist in broadening the field of placement for ex-service men.

(2) Various statistical analyses resulting from the pre-enlistment occupational history survey inaugurated by this sub-committee should be used constructively in planning for the employment of ex-service men by national and regional advisory bodies. This statistical survey should be co-ordinated with information available on service records. The occupational picture would be made more complete by this means and the directions in which special attention should be given to the re-employment of large groups would thus be indicated.

(3) The large inventories of equipment and tools available for post-war salvage should be made the subject of a survey by the Government Departments concerned and the proper steps taken to place these where they will be of most value.

(4) An intensive study is suggested of existing retirement and superannuation schemes with a view to determining what encouragement might be given by the Dominion Government in the age of voluntary retirement with provision for suitable superannuation allowances.

The work of the sub-committees on post-discharge benefits for members of the Women's Corps concerned with the special problems of discharged women, constituted a new field in post-war rehabilitation work. It was recommended that women ex-members of the Forces, on a basis similar to that for ex-service men, be eligible for all benefits, privileges, grants, etc, including cases where re-establishment grants are indicated as necessary. Every angle of the complex question concerning civil re-establishment of discharged women was reported on. It was also recommended that a woman officer be appointed as executive assistant in the

Department of Pensions and National Health and that the appointment of other women officers as needed should be made to give their attention to the welfare, guidance and training of discharged members of the Women's Corps.

**The Advisory Committee on Economic Policy.**—Functioning under the chairmanship of the Deputy Minister of Finance, this is essentially a committee of co-ordination. Its membership is composed of Deputy Ministers and its establishment and operation is itself recognition of the principle that the development of post-war reconstruction policies and measures must be carried on in many different Departments and through many agencies of government with due provision for effective co-ordination. The Advisory Committee on Economic Policy is responsible directly to the Prime Minister in a special sense: thus the Cabinet, which receives recommendations from several sources, including other advisory committees, often refers them back to the Advisory Committee on Economic Policy for analysis, comment and final recommendation. The latter Committee also makes recommendations on its own initiative to the Cabinet from the numerous complex studies and policies advanced by the diverse sub-committees composed of specialists in all branches of national endeavour. The relationship between this Committee and the Cabinet is, in fact, the *confidential* relationship existing between the Ministers of the Crown and expert administrative heads of the Permanent Civil Service. Because of this confidential nature of its duties, no printed reports are submitted.

The Committee was originally established on Sept. 14, 1939, a few days after the outbreak of the War, to investigate, report and advise on questions of economic and financial policy, and on problems arising out of Canadian participation in the War. As reconstruction problems became more pressing, the particular talent and experience of this Committee was directed to post-war reconstruction matters and its scope was widened to cover this work under P.C. 608 of Jan. 23, 1943. Under this Order in Council its duties were made to include planning and organizing the activities of Departments and agencies of the Government in respect to post-war matters and to conduct investigations in collaboration with the Advisory Committee on Reconstruction. The Committee has the authority to assign to any Department responsibility for making investigations and preparing reports relating to its work.

**The Advisory Committee on Reconstruction.**—This Committee was created on the recommendation of the Cabinet Committee on Demobilization and Re-establishment following the enlargement of the latter's functions to include the general subject of post-war reconstruction, to examine and discuss the general post-war problems and to make recommendations as to what Government facilities should be established to deal with these questions. It was first established under P.C. 6874 of Sept. 2, 1941, with power to collect, receive and arrange information in regard to reconstruction policies in Canada and abroad, to receive information from all Government Departments on this subject, to create sub-committees and to undertake special studies. This Committee first reported directly to the Cabinet Committee but under P.C. 609 of Jan. 23, 1943, it was reconstituted and made directly responsible to the Prime Minister as President of the Privy Council. The Committee is particularly concerned with post-war plans and consultative work not directly involving any specific Government Department and collaborates with the Advisory Committee on economic policy. The breadth of this work is illustrated by the division of its special studies among the following six sub-committees:—

(1) *Agricultural Policy*.—To study the desirability of raising the standard of living of all Canadians and the probable developments in the international movement of Canadian agricultural products; to recommend to the Committee on Reconstruction a comprehensive program for the rehabilitation of Canadian agriculture at the end of the present war.

(2) *Conservation and the Development of Natural Resources*.—To consider and recommend to the Committee on Reconstruction, the policy and program appropriate to the most effective conservation and maximum future development of the natural resources of the Dominion, having regard to the importance of these resources as national assets and emphasizing the part which the proposed policies may play in promoting employment opportunities at the end of the present war.

(3) *Post-War Construction*.—To study the extent to which a carefully formulated program of construction projects may contribute to the national welfare of the Dominion as well as provide employment opportunities during the post-war period. To report to the Committee on Reconstruction regarding the way in which such a program may be most effectively organized in advance of the termination of hostilities.

(4) *Housing and Community Planning*.—To review the existing legislation and administrative organization relating to housing and community planning, both urban and rural, throughout the Dominion, and to report to the Committee on Reconstruction regarding such changes in legislation or modifications of organization and procedure as may be necessary to ensure the most effective implementation of what the sub-committee considers to be an adequate housing program for Canada during the years immediately following the present war.

(5) *Post-War Employment Opportunities*.—To consider the most effective organization of employment opportunities in the post-war period, with special reference to the proper use of available labour; legislation or practices affecting the length of the working period, and other relevant implications of the subject of reference. To recommend to the Committee on Reconstruction specific plans regarding legislation or practices in this field.

(6) *Special Post-War Problems of Women*.—To examine the problems relating to the re-establishment of women after the War and to make recommendations to the Committee on Reconstruction as to the procedure to deal with these problems and other matters relating to the welfare of women in the period of reconstruction. This sub-committee has been particularly active in this new field of post-war work.

The Advisory Committee on Reconstruction wound up its work and made its report to the Prime Minister on Sept. 24, 1943. The functions of this Committee were transferred to the Advisory Committee on Economic Policy on Jan. 1, 1944, by P.C. 9946, Dec. 31, 1943. The report of the main Committee\* and the reports of all the sub-committees\* except that on Housing and Community Planning were tabled in the House on Jan. 28, 1944. The main report was published in blue book form in January, 1944, and the recommendations therein made are summarized in the following paragraph.

\* See footnote to p. 745. In May, 1944, seven mimeographed bibliographies were issued, in the form of selected lists of guides for post-war reconstruction studies, under the following captions: (a) International and Domestic Policies; (b) Full Employment; (c) Economic Policy; (d) Industrial Reconstruction; (e) Works Programs; (f) Housing and Town Planning; (g) Conservation and Natural Resources; (h) Social Security.

## REPORT OF THE ADVISORY COMMITTEE ON RECONSTRUCTION\*

In its main or general report—which is supplemented by separate, detailed reports of each of its six sub-committees on their special fields of study—the Committee outlines and analyses the probable major problems of post-war reconstruction and indicates the policies and programs that it considers necessary or desirable for dealing with them. In doing so, the Committee distinguishes between measures for the transition or immediate post-war period and those mainly of long-term application. The discussion of problems and recommendations is closely integrated and only a brief outline of principal aims and recommendations is given here. The interested student should refer to the report itself for the background and bases of conclusions.\*

*Transition Period.*—For the immediate post-war period the Committee recommends that reconstruction policies should have the following paramount aims: peace-time employment as speedily as possible for all men and women able and willing to work; production, with the least possible delay, of adequate supplies of essential goods and services; adequate protection from want of those unable to obtain gainful employment, including safeguarding of children against malnutrition and insufficient educational opportunities; early free functioning of domestic and foreign markets to establish equilibrium speedily among the various Canadian economic groups; modification of monetary policy, price control and commodity rationing policies from time to time to prevent development of inflationary conditions.

*Employment Machinery.*—In order to facilitate prompt re-employment of those discharged from the Armed Services and of war workers, the Committee urges that the efficiency of the employment offices (and of National Selective Service, if maintained) be developed as rapidly as possible to the point where they can give complete coverage of employment opportunities. In this connection, it asserts that speedy re-employment is more important than all questions of relief and social security, since the success of the reconstruction policy will depend upon the number of useful jobs available for those seeking work.

*Commodity and Price Controls.*—The Committee recommends that controls designed to restrict consumption be abandoned as early as possible to permit of an expansion of consumption and consequent enlargement of employment opportunities. On the other hand, it warns that abandonment of all controls when the War ends would cause chaos in many segments of the domestic economy and disrupt Canada's international economic relations, and asserts that, if inflation is to be avoided in Canada, many price controls will need to be retained until there has been a substantial increase in the supply of consumer goods. Accordingly, the Committee recommends that the legal validity of these controls be assured after the War ends.

*Fiscal Policy.*—Fiscal policy as developed for war purposes, the Committee advises, should be reorganized—if possible, during the remaining period of the War—upon lines that will encourage initiative and stimulate private investment. Observing that present taxes on corporate profits, particularly the excess profits tax, tend to dampen initiative and discourage investment, and that operation of

\* *Report of the Advisory Committee on Reconstruction.* King's Printer, 1944: Price 25 cents. The reports of the sub-committees are printed separately under the following titles: Agricultural Policy, Conservation and Development of Natural Resources, Post-War Construction Projects, Housing and Community Planning, Post-War Employment Opportunities, and Problems of Women. To Mar. 31, 1944, all these reports had been published with the exception of "Housing and Community Planning".

the profit motive would accelerate the reconversion of industry and trade, it urges that the corporation profits tax be reduced and the excess profits tax be eliminated as early as possible. To encourage planning for conversion of industry, the Committee also recommends allowance of the expense of surveys and advance planning as a deduction from taxable income. At the same time, it endorses the personal income tax as a flexible and equitable tax weapon, capable of producing an adequate revenue, and suggests, since this tax now reaches out to low incomes, that consumer sales taxes be reconsidered.

*Public Investment.*—The Committee repeats a recommendation, submitted earlier to the Government, for a National Development Board to analyse and rate proposals and plans for all kinds of publicly financed construction projects and thus to assemble a reserve of useful public works, so that construction programs of varying dimensions may be undertaken as needed on short notice.\* It stresses that planning takes time and advance planning is needed if employment on construction projects is to be provided when required.

*Conservation and Development of Natural Resources.*—Stressing the importance of long-range policies for the conservation and use of natural resources, the Committee recommends that a comprehensive aerial survey of Canada be made as a first step for post-war measures, and urges that programs for development and conservation of natural resources be planned and carried out on a regional basis. The reconstruction period, the Committee emphasizes, will provide an appropriate opportunity to undertake effective measures to conserve and augment these resources, and such measures will provide immediate employment, enlarge the national income, and maintain this national wealth in continuous productivity. It recommends also increased research in forestry, fisheries and wild life, measures to stimulate the search for minerals, and careful review of mining taxation.

*Agriculture.*—The Committee considers that the primary problem of agriculture during the immediate post-war years is likely to be that of producing enough to supply domestic demands and the needs of the distressed areas abroad and urges that Canada's responsibility in the matter of relief food supplies be defined early so that domestic plans may be developed in good time. It urges likewise that plans be made to enlarge export markets for the post-transition period and to increase domestic consumption by measures for raising nutritional standards and by research into industrial use of farm crops.

*Social Security.*—Stating that the *Report on Social Security for Canada* by Dr. L. C. Marsh represents its opinions on the measures desirable for Canada, the Committee emphasizes that such measures should be treated as part of a broad program for improvement of the nation's human resources, in which housing, nutritional policy and education have important places. It observes that a system of social security is not feasible unless supported by other policies to maintain economic activity and that it would break down with mass unemployment.

*Dominion-Provincial Relations.*—The Committee stresses strongly the need for co-ordination of policy and procedure among the several governmental authorities in Canada for the effective carrying out of reconstruction plans, and recommends the early calling of a Dominion-Provincial conference, with the *Report of the Royal Commission on Dominion-Provincial Relations* as its agenda, for the purpose of reaching solutions of the problems of distribution of financial revenues and of definition of responsibilities.

\* The report of the Sub-committee on Post-War Construction Projects deals in detail with the functions and scope of this proposed board.

*External Trade.*—The Committee considers that trade channels can best be freed by a carefully considered reduction of tariff barriers rather than by an immediate effort to establish free trade, and for this purpose recommends a comprehensive review of the Canadian tariff structure. As a further basis for expanding foreign trade, it also recommends a survey of import needs as well as of export possibilities.

*Governmental Machinery.*—In conclusion, the Committee repeats an earlier special recommendation for appointment of a Minister of Reconstruction Planning to co-ordinate work in this field during the remaining period of the War.

## Section 2.—The Current Program of the Dominion Government in Regard to Reconstruction

**Government Action Already Operative.**—In addition to the extensive legislative program covering rehabilitation for the Armed Forces, the machinery for the administration of which is covered in detail in Part II of this chapter, the Government has already anticipated the partial demobilization of industry, as industrial production declines and the War reaches its final phases, by the passage of two Orders in Council which are to be confirmed in due course by legislation submitted to Parliament. The first (P.C. 5452, dated July 9, 1943) authorizes interim or partial payments on account to a contractor pending the final settlement of amounts payable under munitions contracts terminated prior to completion. A firm whose plant and facilities have been in large part employed on munitions contracts would, in the case of sudden termination of these, be left in a very difficult position with working capital tied up and no hope for easement until a final accounting was made, perhaps a year or more after the event. This Order in Council is designed to prevent such firms being forced into liquidation due to such circumstances.

The second Order in Council (P.C. 9108 dated Nov. 29, 1943) provides for the setting up of machinery to deal with the disposal of surplus war assets owned by the Government, in such a manner as will cause the minimum of dislocation of the economic structure of the country and will assist in the orderly transition to peacetime basis of the production of such industries as have, during the War, been wholly or substantially engaged in war production.

An Interdepartmental Committee—the Crown Assets Allocation Committee—headed by a full-time chairman and composed of representatives of agriculture, labour, householders and Government Departments, is authorized to obtain reports from Government Departments and other agencies respecting all surpluses and to administer and dispose of such surplus assets.

A Company, known as the War Assets Corporation Limited, has also been created with wide powers to act as the agent of the Government and to hold, manage, operate, convert, sell or otherwise dispose of surplus assets from time to time transferred or assigned to it in such a way as to promote the national well-being.

The progress of the War has resulted in changes in the needs of the Armed Forces for weapons, munitions and equipment. These changes, together with changes in training programs, have made the retention of certain assets unnecessary. The disposal of these will be effected in a manner that will contribute to the continued prosecution of the War and meet the essential civilian needs with as little dislocation as possible.

To provide the Company with necessary working capital the Minister of Munitions and Supply is empowered to advance up to \$5,000,000 by way of payment of shares to be allotted to the Minister. The advances are to be made from amounts

appropriated by Parliament. A Board of Directors that will adequately represent a cross-section of the Canadian economy is provided for, and this Board will obtain expert and specialized advice, on the problems with which they are concerned, through the creation of Advisory Committees.

**Prospective Legislation.**—Among the policies advanced in the Speech from the Throne delivered at the opening of the 5th Session of the Nineteenth Parliament on Jan. 27, 1944, were five proposals that related directly to the subject of post-war reconstruction in its broadest interpretation. These were:—

- (1) The organization of a new Department to administer veterans' affairs.
- (2) The organization of a new Department to administer economic reconstruction.
- (3) The establishment, in conjunction with the Bank of Canada, of an industrial development bank to extend credits and assist business in the transition from war to peace conditions. (See Index.)
- (4) The provision of insurance and export credits to guarantee payment to exporters and aid in obtaining export markets by facilitating trade with occupied or other countries where normal trading channels are dislocated due to the after-effects of war.
- (5) A national housing program.

Bills concerning each of these proposals must be framed, debated and sponsored through the different stages of preliminary procedure before appearing finally on the statute books. Subsequent editions of the Canada Year Book will trace the action that is taken and the administration of the resulting legislation.

### Section 3.—Provincial Government Reconstruction Programs

All the nine provinces have set up planning and inquiry bodies and are working out programs dealing with specific problems in such a way as to co-ordinate provincial effort and co-operate with Dominion agencies.

They have formulated schemes for the post-war employment of returned men and for the utilization of the natural resources of the provinces.

The following outlines give the main directions along which provincial effort had moved to Mar. 31, 1944.

**Prince Edward Island.**—A Reconstruction Committee was formed under the chairmanship of the Premier in May, 1943. The membership of the Committee is representative of the Government, returned soldiers and private interests and its purpose is to investigate problems of reconstruction in the Province. Studies of projects have been made and plans are being formulated, including rural electrification and improved transportation facilities.

The Provincial Government has provided for a Department of Reconstruction by legislation passed at the 1944 session. The purpose of the new Department, when established, will be to promote and co-ordinate plans for provincial developments and post-war employment.

**Nova Scotia.\***—A Royal Commission on Provincial Development and Rehabilitation was appointed by the Government of Nova Scotia on May 12, 1943. Previously a Cabinet Committee on Rehabilitation had been established by Order in Council of June, 1942, and the Nova Scotia Economic Council has also given much attention to economic problems, carrying on a comprehensive regional survey of the resources of the Province. Results of this survey work have been published in six annual reports of the Economic Council (for 1936 to 1941, inclusive).

The purpose of the Royal Commission is to investigate and report on "measures to aid in the rehabilitation of those discharged from the Armed Forces, those discharged from war industries and all other persons who may be seeking employment; and generally to make investigation of the possibilities of economic development with a view to the expansion of industries and markets and the resultant increase in employment". It is preparing reports on agriculture, fisheries, industry, forestry, power, mines, highways and public works, education, social services, etc.

**New Brunswick.†**—The Government of New Brunswick on Jan. 7, 1943, established a Committee on Reconstruction by Order in Council. The purpose of this Committee as set down by the terms of reference is "to encourage and develop in collaboration with existing bodies and groups within the Province . . . a more intensive study . . . of post-war problems and the various phases of rehabilitation and reconstruction as affecting the interests of the people of New Brunswick . . . to co-ordinate such studies and research and so far as possible correlate such investigations . . . with the work of the Dominion Committee on Reconstruction and Rehabilitation".

The Province of New Brunswick had given attention to the subject of post-war reconstruction prior to the formation of this Committee. A five-year plan of road development had been drafted and certain reclamation schemes had been projected. The first step of the Committee of 1943 was to decide upon fields of study and investigation, and the following were agreed upon: (1) Natural resources of the Province in terms of forests, lands, mines, fisheries, electric power, conservation, flood control and recreation; (2) Health and social security; (3) Education; (4) Agriculture, including soil surveys, land settlement, production, marketing, rural electrification, dyking and drainage; (5) Public works; (6) Industrial development; (7) Finance; (8) Rehabilitation of returned men.

Sub-committees were established under the appropriate Government Departments to study and make recommendations in these special fields. Requests were also made by the Committee to the municipalities, service groups and clubs, boards of trade, etc., to present their ideas and provide data to the Committee.

In the autumn of 1943 the Committee toured the Province and held a series of seventeen public hearings at which information, suggestions and recommendations were received.

The New Brunswick Committee proposes a long-term reconstruction program which will cover the establishment of research facilities and the supplying of resulting information regarding: new utilization of raw materials; new production techniques and processes to industry; the creation of credit facilities, including the extension of short-term tax concessions to new industry; an aggressive foreign trade policy

\* For the brief presented by Premier A. S. MacMillan, Nova Scotia, to the House of Commons Special Committee on Reconstruction and Re-establishment, see Sessional Paper No. 35, Dec. 2, 1943, pp. 1010-18.

† For the brief presented by Premier J. B. McNair, K.C., and interim statement made by Dr. N. A. M. Mackenzie, Chairman of the New Brunswick Committee on Reconstruction to the House of Commons Special Committee on Reconstruction and Re-establishment, see Sessional Paper No. 35, Dec. 2, 1943, pp. 1048-64.

designed to secure world markets for Canadian goods, etc. In addition to this long-term program, the Committee suggests immediate plans for the post-war period in the fields of public works, forestry products, flood control and rural electrification.

The Speech from the Throne at the opening of the New Brunswick legislature on Feb. 2, 1944, announced that a New Brunswick Resources Development Board was to be established. This was set up on Mar. 15, 1944. Among its activities forestry problems take a foremost place. The Board will promote the fullest utilization of wood and wood products and assist the people of New Brunswick generally in taking full advantage of the discussions that modern research and scientific investigations have brought about. It was also announced in the Speech from the Throne that a Department of Industry and Reconstruction, to promote post-war planning and industrial development, would be established.

**Quebec.**—The Province of Quebec established an Economic Advisory Board in May, 1943, as a consulting body to investigate the resources of the Province and to suggest necessary measures to insure that they be used as rationally and as completely as possible. Without neglecting large enterprise, particular attention was to be directed to the needs of farmers, fishermen, artisans, small industrialists and small traders.

During the year previous to the establishment of the Board, the Legislative Council of the Province had been charged with the study of post-war problems and special post-war committees were set up on social economy, finance and education. This work, so far as it had progressed, was taken over by the Economic Advisory Board. The membership of the Board is drawn from various social and business groups, and each member represents a different section of the Province. In collaboration with the Federal Government and the governments of the other provinces, a program for the utilization of the labour that will be made available at the close of the present war is to be drawn up. Co-operation extends downwards to the municipal authorities, agriculturists, operators of industry, trade unions, etc. The Board reports to the Premier.

**Ontario.**—The provincial agencies that have been established to study and report on reconstruction policies in Ontario are: (1) The Interdepartmental Committee on Conservation and Rehabilitation. (2) The Committee on Agricultural Policy. (3) The Ontario Social Security and Rehabilitation Committee. (4) The Ontario Agricultural Enquiry Commission. (5) The Department of Planning and Development.

*The Interdepartmental Committee on Conservation and Rehabilitation, February, 1942.*—The general task of this Committee is to study the problems arising from the deterioration of resources in southern Ontario and recommend measures for their rehabilitation and conservation, through the collaboration of specialists, both Provincial and Dominion. The first step was a survey of the Ganaraska Watershed, covering land use, soil classification, forest cover, water supply, erosion control, wild life appraisal, rural population and farm economics.

*The Committee on Agricultural Policy, April, 1943.*—The special field of this Committee which has co-operated with the Sub-committee on Agricultural Policy of the Dominion Advisory Committee on Reconstruction is to seek a high level of living conditions for the farm population in Ontario. It has organized sub-committees to which are delegated specialized studies that require detailed treatment. Among those that are going forward are studies of: (a) rural housing; (b) rehabilitation of farm service buildings; and (c) tile-drainage needs.

*The Ontario Social Security and Rehabilitation Committee, June, 1943.*—This Committee was established to study provincial resources, social security and health insurance, employment, education, re-establishment, research in industry and agriculture, etc. This Committee had not operated on an active basis up to the time of writing (Mar. 31, 1944) and it is not known whether the new Department of Planning and Development will take over its work.

*The Ontario Agricultural Enquiry Commission, September, 1943.*—This Commission was set up to inquire into: (1) the necessity for, and the method of, providing credit for agricultural purposes; (2) the educational facilities necessary for successful agriculture and a satisfactory country life; (3) the organization required for profitable production and marketing of farm products; (4) costs and methods of producing, marketing, distributing, transporting and processing farm products; (5) price spreads, trade practices, etc., and other matters relating to the production and marketing of farm produce. The Commissioners are empowered "to summon any person or corporation and require them to give all evidence on oath and to produce such documents as the Commissioners deem requisite for the full investigation of the matters into which they are appointed to examine". The Commission has been active since its appointment and in addition sub-committees have been working on specialized studies.

*The Department of Planning and Development, February, 1944.*—On Feb. 28, 1944, the Premier of Ontario introduced a Bill to establish the Department of Planning and Development under a Minister of Planning and Development. The purpose of the Department will be to collaborate with other Departments of the Public Service of Ontario; with those of the Dominion and other provinces; with municipal councils; with agricultural, industrial, labour, mining, trade and other associations; and with other organizations and enterprises with a view to formulating plans to create and maintain productive employment and to develop human and material resources of the Province of Ontario and to that end to co-ordinate the work and functions of the other Departments of the Public Service of Ontario.

**Manitoba.**—The organization of provincial reconstruction agencies consists of: (1) a Sub-committee of the Cabinet under the chairmanship of the Premier, and (2) a Committee of Deputy Ministers, both established in 1943, the latter on Apr. 21 and the former on July 13 and certain special inquiry bodies including the Manitoba Electrification Enquiry Commission established in June, 1942, and the Joint Universities' Study established late in 1941.

Post-war planning by the Manitoba Government has three principal objectives:—

- (1) The building up of a program of public projects that will give employment in the post-war period and will also contribute to the development of the Province and the well-being of its residents.
- (2) The study and planning for the expansion of social services in the Province and its municipalities.
- (3) The giving of leadership and the analysis of the co-operation of private enterprise in post-war planning.

Projected works and plans under the above headings may again be divided into three categories:—

- (1) Those considered necessary or desirable regardless of the employment conditions that may prevail at the end of the War. This part of the program has been tentatively budgeted on a 10-year basis and includes

such projects as: rural electrification; agricultural settlement and rehabilitation; surveys and mapping; forestry; conservation and development; fur development; parks and recreational projects, mining development; roads; flood control; improved educational facilities; additional public health and public welfare facilities; and municipal projects.

- (2) Those projects that have been reserved as a pool of employment which can be drawn on as needed to fill any employment gaps. The provision of this reserve of work is designed to give maximum flexibility to the entire program and to enable the Province to cope with any unusual employment situation. These projects are being planned so that they can be undertaken quickly and will provide employment for a considerable variety of skills, trades and professions.
- (3) Projects in this group are mainly those that are contingent on the further development of markets. They are largely hydro-electric power developments that will be proceeded with as the demand for power requires.

In addition to the above program, the various schemes in the field of social services advanced by the Dominion Government are being carefully studied in relation to their application to Manitoba. A lead is being given to private enterprise by special studies in the field of rural and urban housing conditions, and specific surveys on a sampling basis are well advanced.

*The Functions of the Committee.*—The purpose of the Committee of Deputy Ministers is to co-ordinate all the work on post-war reconstruction that is being done or may be done by Government Departments, and to project further studies as they may seem desirable. In all post-war planning it has been assumed that substantial and financial adjustments will be made to enable the provinces to carry out their share effectively in the national post-war program.

A Co-ordinating Committee, representative of all economic groups in the provinces and rural and urban communities, has been appointed to give leadership to groups of citizens throughout the Province and to enlist their active co-operation in post-war planning. Reports have been prepared on the potential industrial uses of the farm products of Manitoba and on prairie farm rehabilitation activities.

The Sub-committee of the Cabinet receives and considers all reports from the Committee of Deputy Ministers as studies and projects progress. The Premier of Manitoba, as Chairman of this Committee, presented a brief to the Dominion House of Commons Special Committee on Reconstruction and Re-establishment outlining the Committee's place in the reconstruction field on June 2, 1943.\*

*Private Agencies Working under Direction of the Government.*—The Manitoba Electrification Enquiry Commission had for its purpose the study of rural electrification and drew up a master plan of hydro extension for the Province. The Commission invited submissions from interested parties or organizations which will facilitate such studies and made an extensive report† recommending a farm electrification program which includes a study of costs, economies to be effected, capacity of farms to pay for power and other related matters.

\* For the brief presented by Premier Stuart Garson of Manitoba, to the House of Commons Special Committee on Reconstruction and Re-establishment, see Sessional Paper No. 19, pp. 485-507. Methods of Industrial Utilization of Plant and Animal Products of the Province of Manitoba: Dr. H. H. Sanderson (in Press March, 1944). Manitoba Agriculture and Prairie Farm Rehabilitation Activities: Prof. J. H. Ellis (in Press March, 1944).

† A Farm Electrification Program. Report of Manitoba Electrification Enquiry Commission 1942. King's Printer, Winnipeg, 1943.

The Joint Universities' Study was established at the request of the then Premier of Manitoba and the then Governor of Minnesota in 1941. The University of Manitoba and the University of Minnesota are collaborating in a long-term regional study of the post-war problems of the Prairie Provinces and the Central Northwest States of the United States. Two publications have been issued.\*

**Saskatchewan.**—In October, 1943, this Province established a Reconstruction Council under the chairmanship of a member of the staff of the University of Saskatchewan to study and investigate conditions and problems likely to arise after the conclusion of the War; to consider, develop and recommend plans, policies and activities for the purpose of meeting such problems; and to confer with Federal, provincial and municipal authorities, private industry, agriculturists, and any other bodies. To Mar. 31, 1944, the Council had received a number of briefs, was in process of analysing them and had instituted certain lines of necessary research.

The Government of Saskatchewan introduced into the Saskatchewan Legislature early in 1944 a Bill to establish a Department of Reconstruction, Labour and Public Welfare. The Department is intended to administer such matters relating to reconstruction and rehabilitation as may later be assigned to it by the Government. It is also provided that the new Department may co-operate with any Department of the Dominion Government in the furtherance of any Federal plans that may be put into operation.

**Alberta.**—Under the Alberta Post-War Reconstruction Act of Mar. 30, 1943, a Post-War Reconstruction Committee was established under the chairmanship of the Minister of Lands and Mines to survey the economy of the Province and prepare a plan for post-war reconstruction that would provide employment in useful enterprises, look toward the proper development of forests, mines, agriculture and other resources, and the establishment of new industries. The Act establishing the Committee is supplemented by a financial measure empowering the Government to set up a post-war reconstruction fund, the nucleus of which was provided by an appropriation of \$1,000,000. The Research Council of Alberta acts as a research body for the Committee and has the same chairman.

On Nov. 26, 1943, the brief of the Minister of Lands and Mines, as Chairman of the Alberta Post-War Reconstruction Committee, was presented to the Dominion House of Commons Committee on Reconstruction and Re-establishment. The brief reviewed the extent and diversity of Alberta's natural resources, the present and potential industrial and agricultural development, and other related matters, all with a view to post-war employment possibilities.†

**British Columbia.**—The organizations established by the Government of British Columbia in the field of reconstruction include: the Post-War Rehabilitation Council established on Feb. 12, 1942, under the chairmanship of the Minister of Education; the Bureau of Post-War Rehabilitation and Reconstruction and the British Columbia Industrial and Scientific Research Council, announcement of

\* Prof. A. R. Upgren and Prof. W. J. Waynes; *The Mid-Continent and the Peace; The Interests of Western Canada and Central Northwest United States in the Peace Settlements*—University of Minnesota Press, Minneapolis, 1943.

† Prof. W. J. Waynes; *The Mid-Continent and the Peace*, No. 2, 1944. Published by the University of Manitoba and the University of Minnesota in co-operation with the University of Minnesota Press, Minnesota, 1944.

† For the brief presented by Premier E. C. Manning, Alberta, to the House of Commons Special Committee on Reconstruction and Re-establishment, see Sessional Paper No. 30, Nov. 26, 1943, pp. 800-20.

both of which was made early in 1944. A gift of one million acres of soil-surveyed land was announced in October, 1943, for the benefit of British Columbia ex-service-men who qualify as farmers under the Veterans Land Act, 1942.

*Post-War Rehabilitation Council.*—The purpose of this Council is to make provision for the advanced planning of rehabilitation measures, industrial re-organization and employment projects. It was the first provincial body composed of the members of a Provincial Legislature to be established in Canada for the consideration of post-war problems. An interim report\* published by the Council summarizes the duties and functions of the Council under the following four headings: (1) To determine the number of returned men and displaced war workers who will be seeking gainful employment in British Columbia at the end of the War. (2) To determine the capacity of existing and potential public and private enterprise in the Province to absorb such men and women. (3) To consider the various post-war measures proposed or contemplated by the Dominion Government. (4) In the light of the foregoing to advise the Provincial Government as to the course of action that will best promote maximum employment.

Part I of the Interim Report deals with the matters relating to returned men, displaced war workers, vocational training, etc. A number of far-reaching recommendations are made in regard to the organization, extension and financing of vocational training, including the establishment of training centres in the interior of the Province; attention to the training and placement needs of disabled and incapacitated residents; continuation of pay and dependants' allowances to discharged persons during vocational training and until suitable employment has been made available. A proposal is made to utilize the highly specialized training which many men are receiving in the Services. The Council recommends that the Dominion Government be asked to consider the organization and maintenance of a Civilian Technical Corps of demobilized members of the Forces who have aircraft, engineering and technical training.

Part II covers the basic industries such as forests and parks, mining, agriculture and land settlement, and fisheries. The development of secondary industries also receives considerable attention. Part III discusses public works, research, regional planning, Dominion-Provincial relations, social security, housing, nutrition, co-operatives and general topics.

Interdepartmental advisory sub-committees have been set up under the Council to explore the fields of agriculture and land settlement; industrial development; parks and forests; and public works. The Hydro-Electric Committee was also established for the purpose of securing reliable information and reporting on the electrification of rural areas, and a fund of \$50,000 was established to cover the work of this Committee for the fiscal year. Co-operation with Boards of Trade, Chambers of Commerce, veterans', farmers', labour and other associations has been encouraged and the members of the Council toured the Province and received a large number of briefs at a series of public hearings.

*Bureau of Post-War Rehabilitation and Reconstruction.*—The purpose of this Bureau, the establishment of which was announced in the Speech from the Throne made in the British Columbia Legislature in February, 1944, will be to co-ordinate the work of the various Provincial Departments and to fit such measures as are within the scope of provincial jurisdiction into the larger program devised by the Dominion Government. The Bureau will operate under a Cabinet Committee.

\* Interim Report of the Post-War Rehabilitation Council, Victoria, B.C., 1943 (with appendix). Supplementary Report of the Post-War Rehabilitation Council (with appendix) February, 1944.

*British Columbia Industrial and Scientific Research Council.*—When organized, this Council, which is under the chairmanship of the Minister of Trade and Industry and Mines, will act as a clearing house to: (1) co-ordinate the work of existing and prospective research units and avoid danger of duplication; (2) initiate and generate new research work in all fields of particular interest to British Columbia; (3) relate research work to other problems of industrial rehabilitation in the post-war period; (4) apply the results of research to the creation of new industries and trade expansion programs, and relate the work of laboratories and field units to industrial expansion and the extension of markets.

An initial grant of \$50,000 to assist in the co-ordinated program is to be made by the Provincial Government.

## **PART II.—THE ADMINISTRATIVE MACHINERY FOR THE REHABILITATION OF EX-SERVICE PERSONNEL\***

### **Section 1.—The Growth of the Administrative Organization for the Care of Ex-Service Personnel**

The Department of Pensions and National Health was established in 1928, through the amalgamation of the former Department of Health with the Department of Soldiers Civil Re-Establishment, set up in February, 1918, to take over the work of the Military Hospitals Commission and all matters affecting the rehabilitation of ex-servicemen of the First World War.

**Basis of Organization After the War of 1914-18.**—At the conclusion of the War of 1914-18, there was considerable decentralization of this work for the ex-servicemen. The general machinery for reception and after-care was directed by a Cabinet Committee, known as the Repatriation Committee, established by Order in Council in November, 1918. In addition, Returned Soldiers Commissions were organized by each Provincial Government. Local organizations were set up in urban centres throughout the Dominion. The actual work of demobilization was in the hands of the Department of Militia and Defence, although the Department of Immigration and Colonization did a great deal to assist in this work and also took charge of the transportation of soldiers' dependants. Employment offices were created under the Department of Labour and, under the Department of the Interior, the Soldier Settlement Board began to function. It had as its policy the placing of ex-servicemen on the land. The Department of Public Information conducted a publicity campaign to interest employers in providing work for ex-servicemen, while the Y.M.C.A., the Y.W.C.A., the Knights of Columbus, the Canadian Red Cross Society, the Salvation Army, the Canadian Patriotic Fund, and a number of other voluntary organizations, turned from war work to deal with the ex-soldiers' problems. To take care of those ex-servicemen who were suffering from disabilities attributable to war service, the Board of Pension Commissioners had been organized as early as 1916.

**The Principal Problems of the First World War and How They were Met.**—At the conclusion of the First World War, conditions were materially different from those that already have been found among men discharged from the Services in the present war. The Canadian Expeditionary Force in the First World War was, in the main, a land army, and there was far from the variety of employment

\* Prepared under the direction of Walter S. Woods, Associate Deputy Minister, Department of Pensions and National Health.

that exists in the present war. What was learned by the soldier of 1914-18 was of little value in civilian life. In the First World War approximately half of the enlisted men were immigrant born. In round figures they totalled 156,000 English; 47,000 Scottish; 19,000 Irish; 35,000 from the United States; and 23,000 from other countries. The majority of these men were comparatively new in Canada and were a product of the large immigration wave that marked the first decade of the twentieth century. Many thousands married while overseas, and at the time of the Armistice in 1918 some 17,000 dependants had been returned to Canada, with approximately 38,000 still to be brought back. This situation maintains in the present war but not to the same extent as in 1914-18. In the present war the vast majority of men serving in the Canadian Armed Forces are Canadian born. In the First World War 84 p.c. of the fighting personnel had elementary school education, 13 p.c. had high or technical school training, and 1½ p.c. had university training. In the present war, 40 p.c. have elementary school training only, 47 p.c. have high or technical school training, and 3 p.c. have university education.

One of the principal problems at the conclusion of the First World War was the fact that Canada, with a population of about 8,000,000 at that time, had to fit back into civilian life approximately 423,000 men within less than a year. Of these 423,000, almost half were the immigrants who were really making a second beginning in their adopted country. Sixty per cent of those returned were over 25 years of age, relatively unskilled and accustomed to work in a pre-war economy with swiftly developing opportunity, tending by choice to short-time employment rather than long service, seniority and slow gains. Thirty-two per cent of those serving overseas wished to take up agriculture. All wished to return to civilian life as quickly as possible, and demonstrations by serving soldiers compelled the acceleration of the demobilization program, making absorption in civilian life more difficult. Many disadvantages arose through this speedy demobilization. Three principal difficulties were encountered. These were:—

- (1) The wishes of discharged men in the matter of selection of place of discharge were freely acceded to, and warrants were issued to destinations, irrespective of place of enlistment or bona fide residence, thus aggravating urban difficulties by concentrations of migrant ex-soldiers in these centres.
- (2) Disbandment of units was effected in such a way as to enable local regiments to receive a "Welcome Home", with consequent demobilization of whole units at one centre at one time.
- (3) Families were re-united and sent back together from overseas, so that they had to find shelter and re-adjust themselves without the heads of the families being given an opportunity in advance to explore the situation and the possibility of employment.

In five months, from March to July of 1919, in response to the urgent demand of the men, 70 p.c. of the overseas force was demobilized in Canada; thus demobilization far exceeded the speed of enlistment. A Force which had taken years to recruit and assemble was returned to civil life in a few months. This led to an immediate heavy burden upon the Department responsible for civil re-establishment and made orderly progress in this work most difficult. A further source of later difficulty was the policy of war service gratuity payments. These were generous enough to avoid difficulty in the early months, but it is felt the system of cash gratuities was not as effective in establishing permanent rehabilitation as other measures that might have been adopted. However, it should be pointed out that, if these payments had not been made, it would have been quite impossible for the rehabilitation administration to handle adequately the tens of thousands being discharged.

Post-war rehabilitation expenditures, exclusive of pensions payable under the Canadian Pension Act, for a nation of 8,000,000 persons were heavy. They were as follows:—

War service gratuities.....	\$164,000,000	
Civilian clothing allowance.....	20,000,000	
Vocational training and training allowances.....	43,000,000	
Medical care, hospital care, treatment, surgical appliances, and treatment pay and allowances.....	84,000,000	
Land settlement (Soldier Settlement Act) original advances.....	\$109,085,320	
Less cash recovery (\$71,364,125) and Accounts Receivable (\$24,126,355).....	95,490,480	
		13,594,840
Dependants' transportation.....		3,000,000
Information service employment and sheltered employment....		20,000,000
Total.....		<u>\$347,594,840</u>

*Additional Assistance Given.*—In addition to this, the Dominion Government also expended \$120,000,000 in Federal works projects in 1920 and \$25,000,000 on housing. These figures do not take into account the national bill for pensions, the total expenditure for which is now nearing the 1,000-million dollar mark. The work, as a result of these expenditures, was of large dimensions. In the first five-year period following the First World War, up to June 30, 1924, 1,336,000 clinical treatments were given; 147,000 men were granted hospital treatment; 42,000 completed vocational training; employment was found for 175,000; 58,000 handicapped men were placed; 38,000 were given employment in Civil Service, including 12,600 permanent positions; 23,000 were dealt with through the Soldier Settlement policy; and 49,000 dependants were brought home to Canada. In addition, over one million inquiries were dealt with.

Despite heavy gratuity payments in the spring and summer of 1919, it became necessary in November and December of that year to set aside Federal monies for the relief of ex-servicemen. In 1920-21, \$842,000 was spent in this way. This figure was doubled in the following financial year. Unemployment assistance to ex-servicemen since the First World War has amounted to over \$26,000,000 and, although in September, 1939, the number of veterans on relief diminished to 5,450, it should be noted that 14,847 veterans were granted War Veterans' Allowances during that three-year period. In 1940 the total number of veterans in receipt of War Veterans' Allowances stood at over 23,000. On Apr. 1, 1937, the Veterans Assistance Commission had almost 34,000 veterans booked as unemployed. Of these, however, only about 15,000 were those Canadians who saw service in France. The remainder were Imperial troops who immigrated to Canada and Canadian forces who did not see overseas service. In that year it was found necessary by the Veterans Assistance Commission to re-start some of the ventures of the civil re-establishment program of the immediate post-war years. These included work shops, probational training, tools and equipment loans, the Corps of Commissionaires, small holdings and a vigorous campaign for employment.

**The Administration of Veterans' Affairs in the Present War.**—The administration of veterans' affairs is carried out by a number of branches of the Department of Pensions and National Health. These may be divided, roughly, into branches which have to deal with rehabilitation of veterans of the present war; medical treatment for all veterans; pensions; and certain allowances for veterans who are in necessitous circumstances, but who are not eligible for pensions.

Under these various main branches are a number of decentralized agencies. For instance, in the division which looks after the rehabilitation of veterans of the present war and which was set up in November, 1940, provision is made for actual administrative work in many key centres throughout Canada. In these centres District Rehabilitation Boards have been set up which review applications for assistance and authorize benefits that apply.

Veterans' Welfare officers also have been stationed in these key centres, and they work through National Selective Service in helping to find jobs and, in a wide sense, advise ex-service personnel on all rehabilitation affairs.

Working closely with these two agencies are citizens' volunteer committees, the local branches of the Canadian Legion, and certain service groups, which have indicated their desire to co-operate with the Department, while a specialized service for the seriously disabled veterans is that provided by the Personal Services Welfare officers, who work in hospitals of the Department of Pensions and National Health to assist the seriously disabled in choosing and following a rehabilitation program.

Two other Departments of Government are concerned with the rehabilitation of the veterans of this War. The Department of Labour, through its Employment and Selective Service offices, actually places ex-servicemen in employment. This Department has and provides the facilities for vocational training. The Department of Mines and Resources administers the Veterans' Land Act, under which ex-service personnel of this War can be established in full-time farming, on small holdings related to employment in an urban community, and on small holdings related to commercial fishing.

Under Section headings 2 to 6 below, the various phases of the administrative work are discussed from a subject standpoint.

## **Section 2.—Discharge Gratuities and Rehabilitation Allowances in the Present War**

Upon his discharge from the Armed Forces, an ex-serviceman with six months' service or more is given an amount equal to one month's pay and dependants' allowances which were paid during his period of service. A clothing allowance of \$65 (increased from \$35 with effect from Nov. 1, 1943) is provided also to aid in re-establishment in civilian life. These grants, which are made by the various Departments of National Defence, are not operative in the cases of those who are discharged for reasons of misconduct. As demobilization proceeds statistics and information will be forthcoming under this Section.

## **Section 3.—The Pensions System as it has Developed in Canada**

**Background of Canadian Pensions Legislation.**—The Pension Act of 1919 established a Board consisting of three members vested with exclusive power and authority to adjudicate upon pension claims and to award pensions for disability or death related to military service in the First World War. The Statute, with appropriate amendments, has been made applicable to claims arising out of the present war.

The basic principle recognized by Parliament and to which the Pension Act gives effect is that a war pension is money owed by the State to a sailor, soldier, airman and his dependants, because of his disablement or death, and that the object of the pension should be to ensure for the pensioner and his dependants that degree of maintenance which he is unable to provide.

As already stated, the original Act of 1919 vested in a Board of Commissioners full power and authority to deal with all matters relating to pension. Applications were considered and decisions made upon whatever evidence was presented. There was no appeal.

In 1923 a Federal Appeal Board was constituted, the authority of which was restricted to deciding the question of relationship to service of injury or disease causing disability or death. Moreover such decisions were restricted to the evidence and record upon which the decision of the Pension Board was based.

In the course of time, returned soldier organizations pressed for the opportunity for applicants to appear personally and produce evidence before the body charged with adjudication of their claims.

In 1930 this demand was met. By the legislation of that year, it was provided that where an applicant was unsuccessful before the primary adjudicating body known as the Pensions Commission, he might have a hearing by a judicial organization called the Pension Tribunal—an ambulatory body adapted to hearing cases at convenient points throughout Canada and to *viva voce* evidence. It was further provided that from decisions of this Tribunal an appeal should lie on the part of the applicant or the Crown to a Pension Appeal Court.

In 1923 the Tribunal was abolished, but the principle of personal appearances and public hearings was maintained.

Under amendments to the Pension Act passed in 1933, a Pensions Commission was retained as previously for the purpose of primary adjudication upon pension claims and the general administration of the Act. The powers of this Commission were restored substantially to those of the 1919 Board. Power and authority with respect to the granting, suspension and cancellation, etc., of pensions was conferred.

All applications for pension were to be made to the Commission. If pension was not granted, the applicant could furnish additional evidence or renew his claim before a quorum of the Commission. The Appeal Court was continued and was vested with jurisdiction on appeal with regard to applications respecting entitlement. The right of appeal was given to the applicant in respect of refusal of applications by the Commission or a quorum and to the Crown in respect of grants by the quorum.

The authority of the Commission in regard to cancellation was restricted in respect of awards made by the Federal Appeal Board, the Tribunal and the Appeal Court, and it was provided also that before any pension was cancelled or reduced by the Commission, due to a change in the basis of entitlement, the pensioner should be afforded an opportunity of appearing before a quorum of the Commission.

In 1936 the principle of second hearings was introduced with a view to securing more adequate and complete preparation of claims. The procedure as then established, with certain modifications, such as hearings by appeal boards of the Commission instead of by quorums and the vesting of such boards with jurisdiction on appeal, has remained in force.

In 1941, Parliament appointed a select committee to consider the general provisions of the Pension Act and ex-servicemen's problems and to make suitable recommendations in regard thereto. After consideration of the Committee's report, which was framed to meet present-day conditions and based on experience gathered in the administration of the Pension Act since the First World War, Parliament decided to make the provisions of that statute, with appropriate amendments, applicable to claims arising out of the present war.

*Summary and Procedure in Regard to Application.*—The provisions of the Pension Act, as originally enacted in 1919, although wide and generous in their scope as compared with pension legislation in other countries, have, therefore, been considerably broadened and extended by various amendments enacted from time to time during the past 24 years. Amendments to the statute since 1919 have:—

- (1) substantially increased the actual amounts of pension payable;
- (2) widened the grounds on which pension might be awarded;
- (3) authorized certain additional benefits, such as clothing allowance for pensioners compelled to wear artificial appliances, allowances for parents, and made special provisions for disability due to tuberculosis;
- (4) introduced the principle of personal appearance and public hearings for applicants;
- (5) with respect to the present War, provided that service anywhere outside of Canada should be regarded as service in a theatre of actual war.

The procedure at present to be followed in dealing with applications for pension arising out of both the First and the Second World Wars, is laid down in Sects. 51 to 61 of the Act. Briefly, it consists of three stages for applicants whose claims are not previously granted. On first application, the evidence presented is considered at what is known as a first hearing. If the Commission's decision is adverse to the applicant, he is entitled to a second hearing, provided he applies within ninety days of the first hearing. When presenting his claim for second hearing, he is required to include all disabilities which he claims to be due to his military service. Prior to second hearing, the applicant is furnished with a complete and detailed summary of all evidence available in the departmental records pertaining to his case. He is given every opportunity to review this evidence, to include any additional evidence he can secure, and is allowed six months from the date of mailing the summary evidence in which to prepare his claim. When notified by the applicant or his representative that the claim is ready for hearing, the Pensions Commission then gives a decision on second hearing. If this decision is adverse to the applicant, he then has the right to appear before an Appeal Board of the Commission sitting in his district and to call witnesses if he desires. The judgment of the Appeal Board is final and the application cannot be considered again, except by special permission of an Appeal Board when it is shown to the satisfaction of such a Board that an error has been made by reason of evidence not having been presented or otherwise.

This procedure has proved eminently satisfactory. Not only is the applicant made fully aware of the reasons which preclude entitlement to a pension but he is given adequate expert assistance by the Veterans' Bureau in the preparation of his claim. It has resulted in bringing to a finality many claims in which the applicants have realized that the evidence of continuity with service of the condition causing disability or death was insufficient and they have decided not to proceed further with their applications.

**Pensions Statistics.**—The Commission's routine pension work arising out of the First World War involves administration of about 75,000 disability and 17,000 dependant awards, as well as adjudication on claims which continue to be received. Decisions rendered by the Commission on various types of applications arising out

of C.E.F. cases and awards average over 1,000 a month, and it is to be noted in this respect that the annual liability in respect of the Pension Act, as at the end of the fiscal year ended Mar. 31, 1944, was \$36,984,872.

## Section 4.—Re-establishment in Civil Life

With the experience of the First World War as a foundation on which to build, the first steps towards re-establishment of the ex-servicemen of the present war were planned almost immediately upon its outbreak. A Cabinet Committee on Demobilization and Re-establishment was appointed a few months after the outbreak of war (see p. 737). A General Advisory Committee on Demobilization and Re-establishment, with a number of sub-committees, was set up immediately afterwards. Their terms of reference had to do entirely with the personal re-establishment of the

individual veteran. In addition to this, it was realized that there must be a well prepared Government program of national reconstruction, especially for the purpose of providing employment during the period between the shutting down of war industry and the commencement of peace-time production. Accordingly, the Cabinet Committee appointed a second advisory body known as the Committee on Reconstruction (see p. 743). Under its direction very exhaustive and comprehensive studies have been conducted into the extent to which war industry may be adapted to peace-time.

With the beginning of discharges of armed personnel in the present war, civil re-establishment of these new veterans became a major part of the work of the Department of Pensions and National Health. Prior to that time the work of the Department, in so far as veterans were concerned, consisted largely of providing medical treatment, supervising payment of pensions and paying certain unemployment allowances to unemployed pensioners. With the growth of the rehabilitation work for the new veterans' machinery had to be set up to cope with the administration of this work (see pp. 741-742).

Many steps have been taken already so that the individual ex-serviceman will become re-established in civilian life without the necessity of a large program of building roads, schools and parks out of public funds. Laid down under three main headings, this post-war program provides:—

- (1) For the task of assisting the individual ex-serviceman in overcoming the handicaps accruing from physical disability and lost time.
- (2) For the task of re-organizing the nation's economy so as to provide opportunity.
- (3) For the organization of a program of social security against incidental unemployment, ill health and impoverished old age.

Steps by which these objectives will be accomplished consist of pensions for those disabled due to war service, vocational training, completion of education, medical treatment for those requiring it, assistance in establishing businesses through maintenance grants while awaiting returns from the business, allowances during the immediate post-war period, special rehabilitation grants, assistance in becoming established on the land, legislation enabling a return to pre-war positions, etc. Legislation already passed dealing with rehabilitation includes the Re-instatement in Civil Employment Act, 1942; the Post Discharge Re-establishment Order, P.C. 7633; the Veterans' Land Act, 1942; the Vocational Training Co-ordination Act and a number of amendments to Acts already on the statute books. Details of steps taken in relation to these various measures are given under the respective headings below.

**Welfare Assistance.**—In November of 1940, there was set up, under P.C. 6282, a Welfare Division of the Department of Pensions and National Health to be known as the Veterans' Welfare Division. The functions of this Division are to advise and assist former members of the Forces in matters pertaining to re-establishment in civil life. Work of the Division, where actual contact with ex-servicemen and women is concerned, is decentralized. In key centres throughout Canada, District Rehabilitation Boards have been set up. These Boards review applications for assistance and authorize benefits that apply. They follow up all cases where grants are made and where training is instituted. They co-operate also with treatment and pension officers.

The second decentralized method of assistance is that provided by the local Veterans' Welfare Officers, who also have been stationed in key centres of the Dominion so that they too may be easily available to veterans needing their services. These Welfare Officers are stationed in the offices of the National Selective Service,

and there they are available to interview and aid ex-servicemen in all their problems. They work through the National Selective Service in helping to find jobs and prepare cases for the information of the District Rehabilitation Boards. In a wide sense they advise on all rehabilitation affairs.

Working closely with these two agencies are the Citizens' Volunteer Committees and the local branches of the Canadian Legion who aid in creating preference for veterans in employment, assist in placement and give advice and counsel.

At least one international organization of businessmen, through the medium of its many clubs, has indicated its desire to co-operate with the Department in the rehabilitation of severely disabled men by providing that personal interest in the individual which is essential.

A specialized service for seriously disabled veterans is that provided by the Personal Services Welfare Officers who work in hospitals of the Department of Pensions and National Health to assist the seriously disabled in choosing and following a rehabilitation program. The Canadian National Institute for the Blind, the Society for the Deaf and Hard of Hearing and the War Amputations of Canada are rendering valuable assistance in the re-establishment of veterans in this category.

Due to greatly increased war industry, many veterans, both of this and the First World War, have been placed in employment by Veterans' Welfare Officers, working with the co-operation of National Selective Service. For the same reason there has been a steady decline in the number of pensioners of the First World War to whom it is necessary to issue unemployment assistance.

Table 3 shows figures on veterans of this and the First World War placed in employment since the passage of the Unemployment Insurance Act, and also the unemployment assistance issued to pensioners of the First World War during the fiscal year 1943-44 and for the same period in the previous fiscal year.

<sup>1</sup> Included in "Assistance Received".

**Re-instatement of Veterans in Civil Employment Act.**—Under this Act given Royal assent on Aug. 1, 1942, provision is made for the re-instatement in civil employment of discharged members of the Armed Forces, together with merchant seamen sailing in coastal waters or in waters outside the territorial limits of Canada, and those who served as members of the Corps of Canadian Firefighters in the United Kingdom.

Under this Act it is the duty of any employer, by whom a person accepted for service was employed, to re-instate that person in employment at the termination of his service. The re-instatement must be made under conditions not less favourable to him than those which would have applied had he not joined the Services. Certain provisions are made. These are:—

- (1) That the right to re-instatement shall be subject to established rules of seniority in the employer's establishment, with retention of seniority rights during the employee's period of service with the Armed Forces or, in the absence of such rules, to preference according to dates of first employment.
- (2) For purposes of pension or other benefits, service in the Armed Forces is held to have been service with the employer.
- (3) In the case of proceedings for violation of the Act, it is considered a defence if the employer can prove that application for re-instatement was not made within three months after the former employee's discharge in Canada from the Armed Forces or from hospital treatment following discharge in Canada, or within four months after discharge overseas or from hospital treatment following discharge overseas. It is also a defence if the ex-serviceman, having been offered re-instatement, fails, without reasonable excuse, to present himself for employment at the time and place notified to him by the employer. If the ex-serviceman were employed originally to take the place of an employee who had been previously accepted for service in the Armed Forces and if that employee were re-instated in his employment, the Act does not apply; nor does it apply if the ex-serviceman is physically or mentally incapable of performing work that is available. Change of circumstances, other than the engagement of some other person, and an offer to re-instate the ex-serviceman in the most favourable occupation and under the most favourable conditions reasonably practical may also be offered as a defence.

**Post-Discharge Re-establishment Grants and Benefits.**—The backbone of the rehabilitation program is the Post-Discharge Re-establishment Order, P.C. 7633, adopted on Oct. 1, 1941. This authorizes the Department to pay a subsistence allowance, based on the rates in the Unemployment Insurance Act, to a discharged man for any period up to the length of his service, or for a maximum of 52 weeks.

Under the Order, the Minister of Pensions and National Health may, subject to certain provisions of the Order, authorize the payment to a discharged person of an out-of-work allowance for any period during which he is capable of and available for work but unable to obtain suitable employment, or who follows any prescribed course of training or instruction. A grant may be made to a discharged person if he is pursuing vocational, technical, or other educational training, if such training is approved and if the person undergoing training makes satisfactory progress. The grant applies also to discharged persons engaged in agriculture or other private enterprises, who are awaiting returns from those enterprises, as well as to those temporarily incapacitated. Discharged persons regularly admitted to university before discharge, or who are regularly admitted within 15 months of discharge or who delay their courses beyond the fifteen-month period owing to satisfactory reasons, also qualify for the grant. University graduates wishing to take post-graduate courses are eligible for the same assistance.

Grants and benefits under the Post Discharge Re-establishment Order are on two scales. For those taking vocational training or continuing education the rate is \$60 monthly for a single man and \$80 monthly for a man and his wife. For those out of work, temporarily incapacitated and awaiting returns from private endeavour the rate is \$50 and \$70 a month, respectively. Additional monthly allowances are made for dependants on the following scale:—

Additional monthly allowance for person in lieu of wife.....	\$ 18·20
Additional monthly allowance for one child.....	12·00
Additional monthly allowance for second child.....	12·00
Additional monthly allowance for third child.....	10·00
Additional monthly allowance for each subsequent child (not in excess of three).....	8·00
Additional monthly allowance for parent or parents.....	15·00

Out of work benefits can be paid only during the first 18 months after discharge. The others may be applied for within 12 months of discharge or cessation of hostilities, whichever is the later date.

Under the provisions of the Order all pensioners will continue to receive the full amount of their pension and additional pension allowances from the Canadian Pension Commission. However, when the pension, with these allowances, is less than the amount of the benefit or grant provided under the Post Discharge Re-establishment Order, the pension is supplemented by a grant to bring the pensioner's income at least to the level of a non-pensioner. In the case of a pensioner who is receiving vocational training or continuing his education, a special training grant is paid, based on his pension rate. This has the effect of bringing the income of all pensioners taking vocational training or continuing education above that of non-pensioners and above the amount of their own pensions. Should it be necessary for a married person, or a person to whom an allowance for dependants is being paid, to leave his home community for a training course, a living allowance of \$5 per week is paid for the period. Under certain circumstances, transportation and other travelling expenses may be allowed.

The Post Discharge Re-establishment Order also provides that the ex-service-men can benefit quickly under the national Unemployment Insurance Act on the same basis as those who had continued in private industry since the Act came into effect. According to the Order, when an ex-serviceman has spent fifteen weeks in insured employment and has paid the contributions accruing in that period, he shall be entitled to benefits under the Act as great as if the entire time of his military service since the Act became effective, July 1, 1941, had been spent in the insured employment.

While the Order applies to members of the Canadian Women's Army Corps, the Royal Canadian Air Force (Women's Division) and the Women's Royal Canadian Naval Service, in their cases, the rate of out-of-work benefits paid shall not exceed the rate of pay of the discharged person at the date of discharge, nor will a benefit be paid to a married woman discharged from these Forces while her husband is

capable of maintaining her. Deductions from benefits payable to a woman shall equal any amount which she is entitled to receive for the period as pension, other than pension which may be payable for a disability of her own.

Financial benefits paid under this Order are as follows:—

**Vocational Training.**—After the First World War vocational training was given only to those whose disabilities prevented their following their previous occupations and to those who joined the Army too young to have learned a trade. Less than 8 p.c. of those who served in the Forces completed vocational training after the War of 1914-18. In marked contrast this time, the Department has authority to grant training to any discharged person, provided he has the aptitude and inclination. Terms of allowances both for the trainee and for his dependants are as set out in the Post Discharge Re-establishment Order, P.C. 7633.

Opportunities for training apply to men and women alike, and the function is to prepare the trainee for permanent employment in a suitable occupation. In order that the training may be adapted to the needs and qualifications of each individual, occupational counsellors interview each applicant for training who desires assistance and advise and assist him in selecting his course.

Short try-out courses are available to assist in choosing a proper vocation, while reconditioning centres are being established to assist certain cases temporarily unfitted for training or employment. Seriously disabled persons and those suffering from serious handicaps are supervised by Personal Services Welfare Officers from the time of hospitalization until established in suitable occupations. Care is taken that vocational courses decided upon are suitable for these persons. Co-operation of the Canadian Institute for the Blind, the Canadian Institute for the Deaf and the Hard of Hearing, and the War Amputations of Canada has been secured to assist cases coming under those three categories.

Because individuals differ widely in abilities, skills, experience, education and personal characteristics, the scope of the vocational training program has been designed to meet the needs of all. The policy has been laid down that in all possible

cases part of the training should be given in industry itself. Facilities already existing, such as technical schools, private schools, and training centres established under the War Emergency Training Program, are being used for the training. If necessary, other special training establishments will be set up as required. Provision is made for instruction in the evening or part-time classes in those cases where trainees are actually receiving their training in industrial employment, while correspondence courses may be approved for trainees who are regularly employed. To provide continuity of employment, in every case possible, arrangements are made that persons trained on the job are placed in the establishment where they will be employed on completion of training. Steps are taken to arrange for final employment of the trainee in the training industry before his training is completed. In approving training in skilled trades, arrangements for such training are made, wherever possible, through established apprenticeship boards. Where possible, in all highly organized trades, the training is given only with the approval and co-operation of the trade union concerned.

Training is available also for those planning careers on farms, but steps are taken to avoid overlapping and misunderstanding in connection with administration of the Veterans' Land Act. The applicant is referred first to the District Advisory Committee which deals with the Veterans' Land Act and, if acceptable, arrangements are then made for training. The same policy is followed with those contemplating taking advantage of the provisions for small holdings under the Veterans' Land Act.

To assist speedy and orderly re-establishment, a program of pre-discharge training in the Armed Services is being laid down for use while troops are awaiting return to Canada. Summaries of educational, occupational and service background are prepared. Vocational counsel and occupational information is given, and it is planned to provide in-service training of a basic vocational nature.

Before discharge, each prospective trainee is made thoroughly familiar with the provisions of the Post Discharge Re-establishment Order. The following procedure has been authorized for persons being discharged from the Army. The District Administrator is given at least ten days' notice before personnel being discharged are turned over to the Department of Pensions and National Health. Persons being discharged from district depots are referred to the Veterans' Welfare Officer who arranges to have each person interviewed before leaving the depot. No person is discharged until his documents have been completed and forwarded to the District Administrator of the Department of Pensions and National Health. Each discharged person is informed of the available facilities for rehabilitation and directed to the appropriate official or office for further action. Once the course of training is decided upon, the Local Rehabilitation Board decides where training is to be given, and admission to the school centre is arranged through the Placement Officer of the Dominion-Provincial Training Program. Reports are submitted to Head Office immediately on completion of training, while the Placement Officer follows up each case for at least six months after commencement of employment.

Table 5 shows the progress of the training program to Sept. 30, 1943.

Persons in training Sept. 30, 1943.....			266

<sup>1</sup> Persons whose training was discontinued but who were later again granted training.

From Nov. 1, 1941, when the courses were first classified by type and district, to Mar. 31, 1943, 1,426 discharged members of the Armed Forces took training courses, 30 of which were in professional subjects, 856 in skilled metal trades, 152 in other skilled trades, 127 in construction and 101 in clerical subjects. Of the total, 277 were taken at Winnipeg, 213 at Quebec, 166 at Vancouver, 148 at Montreal, 124 at Toronto and the remainder at other cities across the Dominion. From Apr. 1, 1943, a more detailed subdivision of the types of courses taken has been made. From that date to Sept. 30, 1943, 8 of the 571 persons taking courses were university students taking professional subjects; 147 were trained as machinists; 104 as stenographers, bookkeepers or other office workers; 99 as acetylene or electric welders; and 87 as electricians, plumbers or metal workers. Of the 571 courses, 115 were taken at Quebec, 108 at Vancouver and 72 at Montreal.

**University Training.**—The policy has been laid down that the young men of to-day who are in the Armed Services will provide Canada's leaders of the future and, as a result, plans have been made under P.C. 7633 for the fullest opportunity for university education for those Service personnel who are qualified. Eligibility regulations provide that the applicant must have been in university, have completed matriculation to university, or be in a position to fit himself for university entrance within fifteen months after discharge.

Educational standards of the present war indicate that the number of Service personnel in a position to pursue university education will be much higher than that prevailing at the conclusion of the First World War. An occupational history form submitted by 347,000 men in the three Arms of the Service up to Aug. 31, 1942, gives the following information on educational standard at the time of enlistment:—

No formal schooling.....	1,400
Elementary school incomplete.....	63,000
Elementary school complete.....	82,000
Junior matriculation incomplete.....	103,000

Junior matriculation complete.....	31,600
Senior matriculation complete.....	13,000
Technical school graduation.....	2,900
Technical school incomplete.....	13,000
University training incomplete.....	11,600
University graduates.....	7,000

Figures for the First World War showed that only 13 p.c. had high or technical school training and only 1.5 p.c. had attended university.

Service personnel in a number of cases, through the establishment of Directorates of Education in each of the Armed Services, are fitting themselves for their education while actually in the Service. These facilities for in-Service education are being carried on under a program devised by the Canadian Legion of the British Empire Service League.

The opportunity for university training is governed by length of service and scholarship. For instance, Service personnel who have served at least two years and who have completed the entrance requirements to the particular university they wish to attend, or who can obtain such admission within fifteen months after discharge, may be assisted for three academic years in university and, if the university career shows promise, they can be carried through to graduation. Where special scholarship is demonstrated, the ex-serviceman may be assisted to a post-graduate degree. In addition to the maintenance grant of \$10.20 per week, if single, and \$14.40 per week, if married, provided by P.C. 7633, tuition, student and athletic fees may be paid. The one restriction is that Service personnel cannot repeat a year's work for which benefits have already been paid, nor can they exhaust benefits in university and then expect to receive vocational training.

This post-discharge training program is now in effect. Seventy-four ex-servicemen and women discharged from the Armed Forces in the present war are attending Canadian universities during the present session. Table 6 shows the universities they are attending and the courses they are taking.

**Assistance to Veterans Settling on the Land.**—The Veterans' Land Act.—The principles embodied in The Veterans' Land Act result from a realistic study of the utilization of land in relation to the re-establishment of war veterans in civil life. Provision is made whereby a substantial part of the cost of each establishment (apart from those made under Sect. 13 of the Act) is borne by the State. The underlying reasons are, first, to bring ownership and a debt-free home within the vision of the veteran before advanced age and resultant disability overtake him; and, secondly, because past experience has shown quite clearly that the average veteran operating under typical conditions cannot successfully cope with the repayment terms of an indebtedness which represents approximately the full cost of establishment. At the same time the average veteran is not possessed of sufficient capital to enable him to establish at the outset the margin of equity that is generally recognized as essential to the soundness of credit operations.

Bearing in mind that members of the Active Service Forces represent many trades or occupations in addition to agriculture, provision is made in the Act for three types of establishment:—

- (1) For veterans who are experienced in agriculture, assistance is available to engage in farming as a full-time occupation, and encouragement will be given to sustain the "family farm" as a Canadian institution;
- (2) For veterans whose normal sphere in Canadian society is in industry or commerce, or in the field of agricultural employment, provision is made for assistance in the establishment of reasonably good homes on small blocks of land outside the high taxation areas. These small farms may provide much of the domestic food supply, but—of equal importance—they provide a better place to rear a family than a city workman can usually find elsewhere. Mechanics, carpenters, masons, electricians, 'white-collar' men and war pensioners, who wish to live on small holdings of this type and serve both urban and rural needs, will find many attractive home opportunities under this part of the plan;
- (3) For the veteran whose normal occupation is in the commercial fishing industry on salt water or on our great inland lakes, provision is made to secure a comfortable home, a plot of ground and the equipment required for his occupation. Provision for assistance of this kind is directed to meet a problem which has long been associated with the daily lives of a class of Canadian citizens whose efforts toward economic and social betterment are frequently made very difficult by the hazards common to their occupation.

Provision is also made for the granting of loans at low rates of interest to Canadian veterans on the security of agricultural lands which they already own and on which they wish to resume farming operations. This provision is contained in Sect. 13 of the Act referred to above.

The terms of sale to a veteran are contained in Sect. 9 of the Act, quoted below:—

"9. (1) The Director may, subject to the provisions of this Act, and of any Order in Council made hereunder, contract with any veteran certified by him to be qualified to participate in the benefits of this Act for the sale to such veteran of land and improvements thereon, building materials, livestock and farm equipment up to a total cost to the Director of six thousand dollars subject to the following conditions:—

- (a) that the cost to the Director of the land and improvements and building materials shall not exceed four thousand eight hundred dollars;
- (b) that the veteran has paid to the Director ten per centum of such cost and the entire cost price of lands, improvements and building materials in excess of four thousand eight hundred dollars;
- (c) that the cost to the Director of the livestock and farm equipment shall not exceed twelve hundred dollars;
- (d) that the sale price to a veteran of land, improvements, building materials, livestock and farm equipment shall be, in addition to any sum paid by the veteran before contract made, a sum equal to two-thirds of the cost to the Director of the land, improvements and building materials;
- (e) that the interest rate payable by a veteran shall be three and one-half per centum per annum;

- (f) that the balance of the purchase price payable by a veteran may be extended over a term not in excess of twenty-five years with interest at the rate aforesaid on the amortization plan;
- (g) that, at the discretion of the Director, terms of payment by a veteran may be varied to provide for payment of interest charges only for a period of five years first following the date of sale or for annual or semi-annual or monthly payments of principal and interest, provided that a maximum repayment period of twenty-five years is not exceeded;
- (h) that, save upon payment in full to the Director of the total outstanding cost to the Director of the land, improvements, livestock and farm equipment together with interest at the said rate on the said outstanding cost and all other charges owing by the veteran in respect thereof, no sale, assignment, or other disposition of the subject-matter of any contract between a veteran and the Director shall be made by the veteran, nor shall any conveyance or transfer be given by the Director to a veteran, during a period of ten years following the date of the relative contract and thereafter only if the veteran has complied with the terms of his agreement for the said ten-year period.

(2) The Director may, in a case of a veteran deemed by him to be qualified to engage in commercial fishing, contract, subject to the provisions of this Act and regulations thereunder, for the sale to such veteran of land and improvements thereon, building materials and commercial fishing equipment up to a total cost to the Director of four thousand eight hundred dollars, subject to the same conditions set forth in subsection one of this section with the words 'commercial fishing equipment' substituted for the words 'livestock and farm equipment' wherever they occur therein."

The Act has been in operation since Nov. 1, 1942, but actual settlement operations have not been undertaken in large volume up to the present time. Administrative activity has been developed toward—

- (1) The creation of an effective staff in order to meet post-war requirements efficiently;
- (2) purchase of land to be held in reserve for post-war settlement operations;
- (3) organization of sources of supply of farm equipment and building materials to meet post-war needs;
- (4) the establishment of a limited number of ex-service men whose circumstances are exceptional and where it is in the public interest and in their interest that they be established under the Act, where it can be done soundly, having regard to the scarcity of farm equipment and building materials.

#### 7.—Summary of Operations Carried Out under the Provisions of the Soldier Settlement Act, 1918, as at Mar. 31, 1943

Province	Applications Made	Persons Established	Still in the Scheme	Repaid Loans	Adjustment Cases
	No.	No.	No.	No.	No.
Maritime Provinces.....	4,553	1,556	454	342	760
Quebec.....	2,796	494	72	81	341
Ontario.....	8,462	2,007	542	577	888
Manitoba.....	10,123	3,680	649	269	2,762
Saskatchewan.....	15,165	6,164	2,268	785	3,111
Alberta.....	15,285	7,158	2,410	1,032	3,716
British Columbia.....	11,131	3,734	965	797	1,972
<b>Totals.....</b>	<b>67,515</b>	<b>24,793</b>	<b>7,360</b>	<b>3,883</b>	<b>13,550</b>

The establishments referred to in Table 7 involved an initial expenditure of \$109,085,321. Total cash recoveries as of Mar. 31, 1943, were \$71,364,126, and accounts receivable stood at \$24,126,356.

Having regard to the financial provision of the Veterans' Land Act and the flexibility of applications in carrying out alternative forms of establishment, the numbers of veterans who will be assisted will greatly exceed the number established under the Soldier Settlement Act.

## Section 5.—The Treatment of Wounded and Sick Veterans

**Hospitalization.**—At the end of the War of 1914-18, the Department of Soldiers' Civil Re-establishment, predecessor of the Department of Pensions and National Health, was operating a total of 44 hospitals and sanatoria and partially operating 6 others. Contracts were also in force with other hospitals to the number of 54. A total of 6,520 in-patients was being treated when demobilization was practically completed in December, 1919.

Prior to a man's discharge, treatment was entirely in the hands of the R.C.A.M.C. After discharge treatment was given: (a) when required for a pensionable disability; (b) within one year after discharge, for disability not attributable to service; (c) when required, while undergoing vocational training.

In the period between wars, most of the hospitals were closed and the sanatoria turned over to the provinces. Hospitals of a permanent character, fully equipped and staffed, were established at Halifax, Saint John, Ste. Anne de Bellevue, Toronto, London, Winnipeg, Calgary and Vancouver. At Charlottetown, Ottawa, Hamilton, Kingston, Windsor, Regina, Saskatoon, Quebec, Edmonton and Victoria use was made of privately or municipally owned hospitals, the Department maintaining a salaried medical staff at these points. Provincially owned sanatoria and mental hospitals have also been employed, under contract arrangements.

In order that facilities should be available for treatment of C.E.F. veterans living at a distance from the centres above named, contracts were entered into from time to time with many hospitals throughout the Dominion. The number of these at Dec. 31, 1943, was about 240, and is steadily increasing.

At the outbreak of the present war, the experience gained as a result of the former one showed that the provision of extended facilities would be essential. Accordingly, steps were taken for enlarging the Department's own hospitals, as well as those at points, such as Ottawa and Edmonton, where the premises used were not operated by the Department. Very extensive alterations and additions have been made, or are under construction, at Ste. Anne de Bellevue, Que.; Camp Hill, Halifax; Ottawa Civic Hospital; at Christie Street and Annex, Toronto; at Westminster, London; at Deer Lodge, Winnipeg; at Calgary (where a new building has just been opened); at University Hospital, Edmonton; at Shaughnessy Hospital, Vancouver; and at Lancaster, Saint John. A new 108-bed wing has been opened at Savard Park Hospital, Quebec, formerly an immigration hospital but now operated for veterans.

Plans have been laid to establish, at a number of points across the Dominion, Health and Occupational Centres to assist in the rehabilitation of neuropsychiatric and other cases, and at one of these, in Gloucester Township near Ottawa, land has been acquired and building is in progress on a 290-acre project.

Tuberculosis accommodation has been recently surveyed and is included in the provision of new premises.

The actual number of beds available in the Department's own hospitals is 7,466, including the new Calgary hospital opened in December, 1943. Provision has been made, and the construction is actually under way, for a further increase of about 2,000.

In so far as veterans are concerned, treatment prior to the present war was available to:—

- (1) Pensioners hospitalized for pensionable disability. These receive free treatment, with allowances for self and family.
- (2) Pensioners treated for non-pensionable disability. These receive free treatment only.

- (3) Non-pensioners with meritorious service. These receive free treatment only.
- (4) Pensioners requiring institutional care owing to inability to adequately care for themselves. These may be required to pay part of cost of treatment if in a position to do so.

After the outbreak of war in 1939, these benefits were made available to those who might serve in the present war. In addition, provision has been made for free treatment for a disability not attributable to service, providing that such treatment was authorized within a year of discharge. This treatment, if continuous, is carried to completion, but treatment allowances may be paid only for a period equal to the period of service, or twelve months, whichever is the lesser, in any event, not subsequent to a date eighteen months after date of discharge.

An important amendment made to treatment allowances since the outbreak of war authorizes the department to continue pay and allowances of rank to an ex-serviceman unable to work and in need of continuous treatment. There is a ceiling of navy sub-lieutenant, army lieutenant and air force flying officer (non-flying list).

Treatment facilities have been made available to those groups of the civil population for whom pension provision has been made for disability arising from war causes.

As the Department of National Defence had practically no hospital facilities at the outbreak of war, and for the purpose of avoiding duplication of such services, arrangements were made for the treatment, as required by the Department of National Defence, of serving personnel.

#### 8.—Members and Former Members of the Armed Forces under Treatment in Departmental and Contract Hospitals, as at Oct. 31, 1943

		Discharges.....		32,741

#### 9.—Pensioners and Non-Pensioners Under Treatment, as at Oct. 31, 1943

War	Pensioners	Non-Pensioners	Total
The War of 1914-18.....	1,553	475	2,028
The Present War.....	488	4,056	4,544
<b>Totals.....</b>	<b>2,041</b>	<b>4,531</b>	<b>6,572</b>

In September, 1943, a survey was made with a view to extending the facilities for treatment and, as a result, arrangements were partly completed by December, 1943, for the use of 31 additional hospitals, so located as to minimize the extent of the veteran's journey.

Many Departmental hospitals and districts are now receiving professional aid by the posting of medical officers from the Armed Services for duty in the institutions, the staffs of which have been heavily burdened as a result of shortage of medical personnel. In some districts, sections of the Departmental hospitals are staffed by service medical officers, nursing sisters, and other ranks, with resulting economy and efficiency. In other districts, the Department of Pensions and National Health has carried the bulk of Active Service medical work where the Army and the Navy have been without hospital accommodation and X-ray facilities.

During 1943 there were heavy admissions to the Departmental hospitals; extended use was made of out-patient clinics and civilian sanatoria in the provinces for the increased number of tuberculosis cases. Closer contact was maintained between the Department, the universities, and the civilian hospitals throughout the country. The growing need of specialists in the various branches of medicine has encouraged this and the development of occupational therapy, physiotherapy, and the greater use of laboratory facilities in Departmental institutions has placed a heavy demand for these trained technicians on available sources of supply. The Department has utilized the services of such specialists for consultant work in Departmental hospitals, the out-patient clinics, and for the care of service personnel in civilian contract hospitals.

**Prostheses and Surgical Appliances.**—The Orthopædic and Surgical Appliances Division of the Department of Pensions and National Health, set up in August of 1916, has, as its first responsibility, the provision of all prostheses, or artificial aids. It operates a main manufacturing centre at Toronto and eleven district depots from coast to coast. Here the measuring, fitting, alterations and repairs to artificial limbs, orthopædic boots, splints and braces, and artificial eyes are carried out. In addition, minor orthopædic appliances such as trusses, glasses, elastic hosiery, etc., are supplied through purchase from private manufacturers.

Under P.C. 91, the Orthopædic and Surgical Appliances Division supplies all these prostheses free of charge to veterans who are eligible and, under P.C. 2311, Provincial Workmen's Compensation Boards are supplied on repayment. Other Government branches, such as that of Indian Affairs, and the Canadian National Railways are supplied.

The Division also carries out considerable research and development work on prostheses. One of the major problems since the outbreak of the War has been the supply of glass for artificial eyes. Prior to the War, this glass had been almost a German monopoly.

Before the outbreak of the present war the Division was responsible for the care of 2,411 leg amputations and 967 arm amputations. Approximately 300 new cases have since developed. Since September, 1939, 23 cases of mercantile marine personnel suffering from immersion foot (a condition which follows prolonged exposure to cold sea water) have been dealt with. All these cases were the results of enemy action at sea.

The Division is also the liaison office between the National Institute for the Blind, which gives care to blinded veterans, and the National Institute for the Deaf and the Hard of Hearing. Seventeen cases have been reported on to date from the present war.

## Section 6.—Returned Soldiers' Insurance

The Returned Soldiers' Insurance Act is under the jurisdiction of the Canadian Pension Commission which acts as agent in this respect for the Minister of Finance. Collections are made through the Department of Pensions and National Health and payments are made by a representative of the Treasury, who is located in the Department. Several extensions have been made from time to time of the date to which applications could be received.

<sup>2</sup> Includes 187 claims not reported in

yearly totals.

<sup>3</sup> Includes deductions amounting to \$1,801 spread over earlier years.

The general Advisory Committee on Demobilization and Rehabilitation gave consideration to the subject of Returned Soldiers' Insurance in their report submitted to the convener of the Cabinet Committee on Sept. 25, 1943. The House of Commons Committee also recommended that Returned Soldiers' Insurance be provided to veterans of the present war on a similar basis to the Returned Soldiers' Insurance provided after the War of 1914-18. The Canadian Legion and a number of other bodies have also made representations favouring the extension of the principle of Returned Soldiers' Insurance to ex-servicemen of the present war. The Act, as at present administered, was passed in 1920, after the War of 1914-18 was well over, and the general Advisory Committee on Demobilization and Rehabilitation felt that since new life tables would require to be prepared by the Department of Insurance, the consideration of details should be left to a more appropriate time although little change would be needed in the form of the Act itself. This Committee considered that the legislation should be extended to cover members of the Navy and the Air Force and also members of the Women's Corps. A sub-committee has been established to study the various proposals and formulate a working program.

		SECTION 4. INDEX NUMBERS OF BOND YIELDS.....	794

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term 'wholesale' is not used literally, and primary producers, factory and jobbers quotations, as well as actual wholesale prices, are often included in this group. Markets in which this type of price is quoted are usually well organized, and frequently very sensitive. They are responsive to changing business and monetary conditions. Wholesale quotations are preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to economic factors.

Retail prices represent more diffused markets and are less sensitive. There is ordinarily a lag of several months between this type of quotation and its wholesale counterpart. Retail prices are important from a statistical point of view, however, because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community.

### THE ACTIVITIES OF THE WARTIME PRICES AND TRADE BOARD IN CONTROLLING PRICES, RENTS AND SUPPLIES†

The functions of the Wartime Prices and Trade Board are to prevent prices and living costs from rising, and to assure a sufficient supply and orderly distribution of necessary civilian goods and services. The activities of the Board during the first two years of the War and the early period of the overall price ceiling were outlined in the Canada Year Book, 1942 (pp. 724-727). The present article, dealing mainly with developments in 1943, outlines the main principles of price control in Canada and the Board's work in maintaining and distributing civilian supplies. Further discussion of various aspects of the Board's work will be found in the Introduction to this Year Book and in the chapters on Manufactures and Internal Trade (pp. 354-362 and pp. 521-526). A more comprehensive account of the Board's activities may be found in the two Reports to Parliament (King's Printer, Ottawa), the first covering the period from Sept. 3, 1939, to Mar. 31, 1943, the second dealing with the remaining nine months of 1943.

**Price Control.**—The system of price control in Canada is based on the general principle that the maximum ("ceiling") price of an article for each individual seller shall be equal to the highest price which the seller charged for the article during the four-week "basic period", Sept. 15 to Oct. 11, 1941. In some cases (e.g., certain agricultural and forestry products such as meats and fuelwood), the Board has

\* Except as otherwise credited, the sections of this chapter have been revised by H. F. Greenway, M.A., Chief, Prices Branch. This Branch compiles and publishes statistics on: Wholesale and Retail Prices and Services; Cost of Living; Prices of Securities and Bond Yields. For a complete list of the publications of this Branch see Chapter XXX, Section I, under Internal Trade.

† Prepared in the Research Section, Economics Branch, Wartime Prices and Trade Board.

replaced individual basic-period prices by "standard" maximum prices applicable to all sellers, with allowance made for regional differences, and in some cases for seasonal fluctuations. Standard prices have usually been set at the wholesale level with standard or basic-period retail markups being set out, but in a number of cases specific retail prices have also been fixed. In fixing such standard prices or markups, the general price prevailing during the basic period (or, in certain cases, during the corresponding season in 1941) has been the main criterion. In a few cases, sales of primary products were exempted from price-ceiling regulations, since control would have raised very great administrative difficulties. However, where these prices have tended to rise unduly price control has been reimposed.

The basic-period principle goes further than simply the stabilization of prices at a certain level. It includes the maintenance, so far as available resources permit, of the same price-quality relationships, the same price ranges and the same proportionate volume of production in low-price lines as during the basic period or the corresponding season in 1941. It involves, too, the distribution of scarce goods to the various regions and retailers in the same proportion as previously. If this were not done, the consumer would experience a rise in living costs, without any increase in prices taking place, for he would be forced to buy a more expensive grade or a less satisfactory type of article than was his custom.

The most serious problem the Board has had to face has been the pressure of rising costs on the price ceiling which developed initially because retail prices in the basic period were naturally based on manufacturing costs in an earlier period, and therefore did not take account of the higher level of current replacement costs. With rising prices in other countries on which Canada depended for supplies, and with higher shipping costs, the cost of imported goods continued to rise. Later, as war production expanded and shortages of materials and labour became more widespread, unit costs increased for a variety of reasons: greater labour turnover, the use of less experienced help, wage increases, the use of substitute materials, lack of the usual means of transportation and, in some cases, reductions in the volume of output and sales, and uneven flow of supplies.

In dealing with rising costs the Board's policy is to distribute, whenever possible, the increased costs among the various sections of the trade ("sharing the squeeze"), and also to reduce costs by eliminating unnecessary manufacturing and distributive practices. Cost reduction is the chief aim of the Board's program of simplification, although it is also aimed at making the most effective use of scarce materials, labour and plant facilities. Further reference to the simplification program as applied to various manufactures will be found in Chapter XIV at pp. 354-362. A great many cost-reducing measures have been introduced voluntarily by industry, but where necessary, formal simplification orders have been issued by the Board. The general method of simplification has been to prohibit certain manufacturing and distribution practices and to reduce the number of lines, rather than prescribing standard practices or "standard" or "utility" types of goods as in Great Britain. Simplification has brought about considerable economies without necessitating the extensive machine changeover or excessive disruption of normal marketing practices which would have been entailed by standardization.

Where absorption of the cost "squeeze" and cost-reducing measures have not been sufficient to meet the problem of rising costs, the Board has, in some cases, provided relief by subsidy, remission of duties and taxes on imports, or by taking losses on Government bulk purchases of raw materials. When relief is needed, the decision to provide it by one of these methods has depended primarily on the essential

ality of the goods, or their importance, directly or indirectly, to the cost of living. It is not the policy of the Government to give assistance from public funds for the production of luxury items. In a few cases relief has been given by raising maximum consumer prices. This is done very infrequently and only where payment of a subsidy would be impracticable from an administrative point of view or where the effect on the cost of living is negligible and the article is not essential.

Subsidies are paid at the level of trade that presents the least administrative problems, and the relief is, so far as is required, distributed to other manufacturers and distributors and to the consumer by appropriate price adjustments. Since subsidies are paid for the benefit of domestic consumers, arrangements are made to withhold or recover subsidy payments on goods exported, sold for ships' stores or sold to the Department of Munitions and Supply or its agencies.

Rising import costs have been offset in many cases by subsidy payments, by the absorption of trading losses on bulk purchases or by the remission of import duties and taxes. There is an increasing list of non-essential imports which have been declared ineligible for subsidy consideration.

In the manufacturing industries, subsidies have been paid to offset increased costs such as those resulting from a rise in the price of raw materials, the use of more expensive substitutes, or reduced labour efficiency. It has not, however, been the Government's policy to pay subsidies to offset wage increases. In many cases subsidies have been accompanied or followed by further squeeze adjustments and simplification measures designed to reduce subsidy payments. In a number of industries subsidy payments have been adjusted to the profit position of each firm so as not to raise a company's profits above the level at which the 100 p.c. excess profits tax rate becomes effective.

In the case of a number of primary products, subsidies have on occasion been paid to permit higher prices to producers, designed to stimulate production, while preventing an increase in wholesale and retail prices. Examples of subsidies of this sort are those on various dairy products and those paid to growers of fruits and vegetables for processing. (Most of these subsidies were taken over by the Department of Agriculture in 1943.)

Transportation subsidies have been paid in a number of cases to facilitate the proper distribution of scarce supplies between regions. An example of this is a subsidy paid to enable butter to move from the west to areas of shortage in the east. Finally, a number of subsidies were designed to reduce retail prices in order to lower the cost of living. These "consumer subsidies" are discussed below.

Apart from increased costs, a second problem encountered in the administration of the price ceiling has been the war-time increase in civilian purchasing power. Increasing employment, higher wages and longer hours of work have increased individual incomes substantially. Owing to the overwhelming need for war production, civilian production has not, of course, been able to keep step with this increase in incomes, and in a number of lines shortages in relation to the greatly increased demand developed. In some cases, such as fresh fruits and vegetables which were originally exempted from the ceiling or certain other foodstuffs where the basic period price structure was difficult to enforce, this situation led to further increases in prices. Problems of this kind have been largely met by bringing exempted products under the ceiling and by establishing more specific and enforceable methods of price control. (See p. 777.)

Uniform pricing procedure for goods not on the market during the basic period was laid down in the Consumer Goods Order (Board Order No. 214) issued in March, 1943. This pricing procedure was required for the pricing of new goods, goods made of substitute materials, or goods which had not been on the market in the basic period and which later reappeared. Under the terms of this Order a manufacturer or dealer might sell goods "similar" in usefulness and intrinsic worth to others on which a ceiling price had been fixed at the same price, subject to the subsequent approval of the administrator concerned. On the same basis a dealer was permitted to sell goods at the same price as "identical" goods sold by a competitor who had established a ceiling price on these goods. Where goods were "dissimilar" in usefulness, durability, serviceability or intrinsic worth to any for which a maximum price had been established, the maximum price was to be fixed by the Administrator. The main consideration in pricing "dissimilar" goods is the price at which goods of the same nature would have sold in the basic period. In the case of a new article which costs more to produce than a comparable article, the problem is dealt with in accordance with the principles covering increased costs (see p. 778).

The special conditions in the clothing industry made it difficult to apply the provisions of Board Order No. 214. In many branches of the industry the absence of standard models and the variation of styles, made it impracticable to leave the decision as to what is a "similar" article in the hands of the manufacturer as provided under B-214, even though the Administrator had the power subsequently to make a different ruling. In a number of branches of the clothing trades, therefore, manufacturers were required to submit particulars and samples of cloth for each style of garment they intended to produce, and to obtain a ruling as to the maximum price from the Administrator. This procedure has been established, for example, in the industries producing women's coats and suits, women's dresses, men's shirts, etc.

*The Price Ceiling in 1943.*—Late in 1942 the cost of living was moving upward and was approaching the point where another cost-of-living bonus would have become payable (see Introduction to this volume). One of the factors involved was a rise in beef prices authorized in October, when provision was also made for monthly seasonal increases in beef prices up to June, 1943. In these circumstances it was decided to reduce the prices of certain widely used foodstuffs by payment of subsidies and/or the remission of import taxes and duties, with a view to bringing the cost of living at least part way back to the level of the basic period. It was felt that it would be fairer to check the rise in the cost of living, which affects every person, than to pay an additional cost-of-living bonus, which certain important groups—small proprietors, farmers, pensioners, etc.—do not receive. It was also clear that another increase in the cost-of-living bonus would have resulted in higher costs of production and hence in widening demands for further price adjustments and subsidies.

The articles selected for the price reduction were milk, oranges, tea and coffee. The factors influencing this choice were the importance of the articles in day-to-day consumption and the relative administrative simplicity of subsidizing these particular prices. As a result of these price reductions, an adjustment in butter prices, and some seasonal price movements, the cost-of-living index declined between Dec. 1, 1942, and Jan. 1, 1943, by 1.7 points to 116.2 (August, 1939 = 100).

Pressure of meat prices continued to be a threat to the stabilization of the cost of living. However, rationing of meat and the setting of standard prices helped to stabilize the meat price level. In 1942, standard wholesale prices for beef and lamb were set, varying from zone to zone and with suitable provision for seasonal move-

ments. Veal and pork followed in February and March of 1943. Rationing of meat was introduced in May, 1943 (see p. 524). More effective control over retail prices was obtained by standardizing retail cuts, and setting standard retail prices for these cuts. This system was applied to beef sales in a number of large cities early in 1943. In the summer it was extended to all areas, and similar systems for veal and lamb were introduced later in the year.

Fresh fruits and vegetables presented another major problem in the summer and fall of 1943. While they were originally exempt from the price ceiling, the pressure on their prices arising from increasing demand and limited supply made it necessary to impose price control despite the very great administrative difficulties involved. Standard maximum wholesale prices and retail markups were, therefore, fixed for many of the more important fruits and vegetables with due provision for regional and seasonal variations in price.

**Rentals.**—Rent is an important element in the cost of living and one which, in the absence of control, would have increased in many areas where housing shortages have developed. The demand for housing has grown because of the influx of people to certain industrial areas and military centres and as a result of higher earnings of war workers and others. War-time restrictions, shortage of labour and other factors have prevented a sufficient increase in the supply of accommodation, and as a result there has been considerable upward pressure on rentals. Rent control was first introduced in a few special areas only, and applied only to residential accommodation. It was, however, extended step by step to cover all areas and all types of housing, rooming, hotel and commercial accommodation. The general principle of rent control is that rents are "frozen" at the level prevailing on a selected "basic date" (Oct. 11, 1941, for housing accommodation except where rents had been fixed earlier, and July 1, 1943, for rooming accommodation in most areas), and maximum rentals for new accommodation are fixed by Rentals Appraisers appointed by the Board for each district. Applications for variation of maximum rentals may be made by landlords or tenants to a Rentals Appraiser, and appeals against the Rental Appraiser's decision may be made to a "Court of Rental Appeals" in the locality. The main grounds on which an application for a variation in rentals may be made are a change in the amount of accommodation, furniture or services provided, an unduly high or low rental compared with rents prevailing on the basic date for similar accommodation in the neighbourhood, or an increase in rates or taxes.

In congested areas rent control can be effective only if the tenant is protected against eviction. Rental regulations, therefore, provide that well-behaved tenants of housing accommodation may be evicted only if the landlord or his family desire to live in the accommodation themselves, or if the landlord wishes to subdivide the accommodation so as to house more persons. Six months' notice is required in the first case, and three months, in the second case.

The Board also seeks to promote the most effective use of available accommodation by operating housing registries in congested cities, promoting subdivision of houses, etc.

**Control of Supplies.**—Associated with and as an integral part of the price-ceiling policy are measures designed to assure the supply and distribution of civilian goods. This involves arrangements to secure necessary imports, allocation of productive resources between military, civilian and export requirements, distribution of scarce materials among manufacturers and other measures to ensure the

meeting of more essential needs before the less essential. In some cases the Board has gone so far as to require manufacturers to produce certain goods in designated quantities. Finally, the Board performs important functions in the control of retail distribution, as described at pp. 521-526.

*International Controls.*—Canada is dependent on foreign sources for supplies of important goods, and furnishes supplies to other United Nations; it is therefore, necessary to maintain close relations with the international (combined) Boards situated at Washington, whose functions include the allocation of many essential materials, allocation of shipping and the guidance of production activities within the United Nations. Decisions of these Boards regarding the allocation of supplies are then implemented by the agencies responsible for production and allocation in each country.

The Combined Production and Resources Board consists of representatives of the United States, United Kingdom and Canada. Its chief function is to co-ordinate the production of war supplies, but, to an increasing extent, it is concerned with the allocation of the more essential civilian goods. Administrators of the Wartime Prices and Trade Board serve as the Canadian members of some of the committees of this Combined Board (e.g., textiles, farm implements, leather and footwear, etc.). Information on Canadian raw-material requirements and supplies is submitted to the Combined (U.S.-U.K.) Raw Materials Board, through the medium of the Joint Materials Co-ordinating Committee (Canada-U.S.). Since late in 1943, Canadian representatives have sat as members of the different commodity sub-committees of the Combined Food Board, a situation which was recently formalized by the addition of Canada as a full member of the Board by the side of the United States and the United Kingdom.

Through the Canadian Division of the U.S. War Production Board at Washington, Canada obtains allocations of raw materials and finished goods produced in the United States. The Washington Branch of the Wartime Prices and Trade Board maintains close and continuous contact with the Canadian Division of the War Production Board and assists in the presentation of Canadian civilian requirements to the Divisional Requirements Committees of the War Production Board, dealing with various commodities. The Board also maintains contact in the United Kingdom with the Board of Trade and the Ministry of Supply and obtains allocations of British supplies required by Canada.

Of course, an allocation of supplies by the War Production Board or one of the international boards does not always of itself guarantee that the quota allocated will be obtained by Canada. The Wartime Prices and Trade Board, therefore, must sometimes take further steps. It may obtain priority assistance for Canadian requirements or it may ensure imports by bulk purchasing through one of its associated companies.

Most bulk purchases are undertaken by Commodity Prices Stabilization Corporation Limited, the agency also entrusted with the disbursement of subsidies on behalf of the Board. Raw wool and yarns are bulk purchased by the Canadian Wool Board, and Wartime Food Corporation Limited, has powers to bulk purchase fresh fruits and vegetables, if necessary.

Some international agreements for the allocation of supplies require that purchases be made through a central government agency, and in some cases the whole Empire production of a product is bought up by the British Government, who will sell only to government agencies in other countries. This applies, for instance, in the case of sugar and tea. Canada's share of these commodities is

bought by C.P.S.C. on behalf of the Prices Board. In the case of tea the share of each country is allocated by an international committee at London which was set up on the initiative of the Combined Food Board.

So far as possible, bulk purchases are distributed in Canada through the ordinary channels of trade, importers acting as agents for the Corporation. The Corporation assumes all the risks involved in the transaction and is responsible for obtaining the necessary shipping space which is allocated by a Shipping Priorities Committee, on which the Corporation has a representative.

*Domestic Controls.*—Various procedures have been established for allocating productive resources and supplies between the military and civilian sectors of the Canadian economy and the export trade. For example, the National Textile and Leather Requirements Committee allocates available supplies of textiles and leather between the Armed Services, the civilian population, and requirements under the Mutual Aid Program. The Committee is composed of representatives of the Wartime Prices and Trade Board, the three Armed Services, and the Department of Munitions and Supply.

Another interdepartmental committee, on which the Board plays an important part, the Food Requirements Committee, considers all major questions of policy connected with food production and supply in Canada and with the supply of Canadian foodstuffs to other nations. Among other tasks, this Committee supervises the preparation of information on Canada's food position for submission to the Combined Food Board at Washington. It also reviews Canada's undertakings to export food to Great Britain and other United Nations.

The domestic distribution of food supplies is a responsibility of the Wartime Prices and Trade Board to which the Armed Services submit their requirements. Broadly speaking, the Board is responsible for distribution and imports while the Department of Agriculture is responsible for production and exports.

In the case of metals, lumber and other raw materials controlled by the Department of Munitions and Supply, the Wartime Prices and Trade Board has, in most cases, negotiated with the Wartime Industries Control Board for allocations of materials for particular civilian purposes.

Labour requirements of the different sections of the economy are under continuous study by the advisory Interdepartmental Labour Priorities Committee representing National Selective Service, the Wartime Prices and Trade Board, and the Departments of Munitions and Supply, Labour, and Trade and Commerce. Where additional labour is required to maintain essential civilian production and where all reasonable steps have been taken to make the most effective use of the existing labour force, the Board submits the requirements of the industry concerned to the Committee, which may then make appropriate recommendations to National Selective Service.

In order to ensure the best use of civilian supplies, materials in short supply are allocated, formally or informally, to the different manufacturers by the Board's Administrators. Many non-essential uses of materials and non-essential manufacturing operations have been eliminated through the various simplification and conservation measures referred to above. Most of these have resulted in both reduction of costs and conservation of materials, labour or plant facilities.

In some cases it has been necessary for the Board to program the production of consumer goods in order to assure minimum essential supplies. In certain of the clothing trades this has been done by means of formal "production directives" issued to each manufacturer and requiring him to produce various types of goods in

certain quantities. For example, manufacturers of knitted underwear were directed to produce definite quantities of various types of men's, women's and children's underwear. The quotas are based primarily on estimates of requirements and current manufacturing capacity, and the Board undertakes to assist manufacturers in the procurement of any additional raw materials or labour that may be required. In the case of knitted underwear, spinners were directed to deliver certain minimum quantities of machine knitting yarns to the knitters and at the same time steps were taken to obtain United States preference ratings to facilitate importation of yarns. Apart from the formal directives, the informal direction of production and assistance to producers in obtaining materials and labour constitutes an important part of the work of the Board's administrators.

In the metal industries a few production programs were developed owing to the need to ensure or resume production of minimum amounts of essential civilian goods. For example, production and import quotas for farm machinery were worked out in collaboration with the Wartime Industries Control Board and the War Production Board of the United States.

*Distribution.*—After every feasible effort has been made to increase supply, it is still inevitable that there will be shortages in many lines of consumer goods due to the large proportion of productive facilities devoted to war work and to the increased demand from the civilian population with its greatly expanded purchasing power. The Board, therefore, ensures that goods in short supply are distributed equitably, and that highly essential needs are given priority. A few widely used foodstuffs are rationed to all consumers, while some other goods are sold only to certain consumers to whom they are essential or else on a priority basis, ensuring that all essential needs are met first. Most goods, however, are controlled only by the Board's policy of "equitable distribution" which requires manufacturers and wholesalers to divide scarce supplies between their customers in the same proportion as during 1941, though adjustments are made to allow for shifts in population. The Board's distribution policy is described in detail in the article on Distribution Controls (pp. 525-526).

**Conclusion.**—The Board's activities are only one part of the Government's general stabilization program. There are also the controls over purchasing power through taxation and public borrowing and the controls on wages and manpower. Figures can indicate only imperfectly the effectiveness of a general stabilization program of this sort. However, some indication of the effect of price control is given by a comparison of the increase in the cost of living since the basic period, with the rise in the corresponding period of the last war. Between October, 1941, and December, 1943, the cost-of-living index rose by 3.3 p.c. while in the corresponding period of the War of 1914-18, October, 1916, to December, 1918, the cost-of-living index rose by 35 p.c.

## Section 1.—Wholesale Prices of Commodities

### Subsection 1.—Historical Review of Wholesale Price Movements (1926 = 100)

The broad movement in wholesale prices had been gradually upward for a period of sixteen years prior to the outbreak of war in 1914. From an average of 43.6 in 1897, the general wholesale index advanced without appreciable interruption to 64.4 in July, 1914. By the end of the War in November, 1918, this index had reached 132.8, and it continued upward to a post-war inflationary peak of 164.3

in May, 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained in comparative stability. Annual averages in this interval held between a high of 102.6 for 1925 and 95.6 for 1929. For the three years following 1929, depressionary influences were so severe that prices fell to the level of those of 1913. In February, 1933, the wholesale index touched an extreme low of 63.5 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, 87.6 in July, 1937, was substantially below the 1926 average. The collapse of the wheat market in 1938, along with fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about eleven points above the

1913 levels. The August, 1939, index of 72.3 marked the extreme low of a two-year decline. The movement of prices prior to the outbreak of the present war was quite different, therefore, from that which preceded the War of 1914-18. The relatively low level of prices in August, 1939, probably influenced the sharper initial advance at the outbreak of war. However, during 1940 price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in war-time production had made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general

price control in December, 1941, followed a year in which wholesale prices had advanced 11.2 p.c. as compared with 3.1 p.c. in 1940. The effectiveness of control in the first two years may be judged by the increase for 1942 and 1943, respectively, of 3.8 and 5.6 p.c. The December, 1943, wholesale index of 102.5 was slightly above the 1926 average which is representative of the stabilization levels following the War of 1914-18.

### Subsection 2.—War-time Relationships between Wholesale Prices of Farm Products and All Commodities\*

Contrasts are more marked than parallels in farm-product wholesale prices and all-commodity wholesale prices for First and Second World War years. Farm-product prices had shown moderate improvement relative to other commodity prices in the years preceding 1914, and pre-war levels were the highest reached in more than two decades. August, 1939, found grain prices severely depressed, and the alignment between farm-product and other prices was then similar to that which existed in the depression years of 1932 and 1933. The initial reaction of farm-product prices was upward after the outbreak of both wars and in each case there was a severe reaction in the summer following. The large grain crop of 1915 brought the wholesale farm-product index sharply downward during the summer of that year, while in 1940 the collapse of France was accompanied by a severe reaction in farm-product prices. However, recovery was much more rapid in the War of 1914-18 than in the present war. Taking an average of prices in the year ended August, 1914, as equal to 100, the advance in farm-product prices overtook the rise in all commodities in August, 1916 (i.e., in exactly two years), and the farm-price index on this base remained above the all-commodity index until April, 1918. When the year ended August, 1939, was taken as 100, the farm-product wholesale price index continued below the all-commodity index until September, 1942 (i.e., for a little over three years). The gap between these two series remained substantially unchanged until the end of 1941. After that time the rate of increase of wholesale prices was reduced, although wholesale farm-product prices continued to advance.

The sharpest contrast in price behaviour of the First and Second World Wars occurred in the third year in each case. In midsummer, 1916, the uncertain movement of the two preceding years gave way to an abrupt rise which carried all commodities upward 47 p.c. and farm-product wholesale prices 83 p.c. between June, 1916, and May, 1917. From June, 1941, to May, 1942, corresponding increases amounted to 6 p.c. for all commodities and 13 p.c. for farm products. There was a substantial reaction from May, 1917, levels of farm products before the final inflationary sweep which continued until May, 1920, but in 1942 general wholesale price levels continued to edge gradually upward throughout the year.

Relationships between the general wholesale price index and the farm-products price index are substantially changed if wheat is excluded from the latter. On this basis the September, 1939, index level for all commodities was 106.8 (year ended August 1939=100) compared with 104.7 for farm products. By December, 1941, the farm-products index had passed the general commodity series reaching 129.2 compared with 127.4 for the general index. This margin was widened in 1942 with farm products reaching 148.7 in December, 1942, as compared with 132.2 for the general index; comparative figures for December, 1943, (165.0 against 139.6) indicate a further widening. Prices for cattle and potatoes were

\* To give a clear-cut comparison of war-time price movements, index numbers quoted in the text of this section have been converted to pre-war reference periods, i.e., the years ended August, 1914, and August, 1939=100. The percentage changes recorded by these indexes from year to year are the same as those for corresponding index numbers in Tables 1 and 2 following.

primarily responsible for the 1942 increase in the farm-products index; the same two commodities showed substantial rises in 1943 with grains (excluding wheat) and milk also contributing to the general increase.

<sup>1</sup> Subject to revision.

## Section 2.—Cost of Living

A consolidation of official cost-of-living indexes was made in 1940 when the index shown at pp. 789-790, on the base 1935-39=100, replaced the Bureau of Statistics' preceding series on the base 1926=100, and also the Dominion Department of Labour's index on the base 1913=100. The Bureau's new index reflects changes in a fixed budget covering retail prices of commodities, services and shelter costs based upon the expenditure experience of 1,439 urban wage-earner families in the year ended Sept. 30, 1938. The record completed by these families was especially designed to provide budget data necessary for the accurate compilation of a cost-of-living index. It must be kept in mind, however, that the new index reflects changes in the cost of the same level of living from month to month and year to year. No account has been taken of shifting planes of living because of changes in economic circumstances, e.g., variations in income or direct taxation, or because of changing ages or variation in numbers of persons in the family. The basis of selecting families for the 1938 expenditure survey has been described in the 1941 Year Book at p. 723. Fuller particulars of the methodology employed and a summary of the results of the Nutrition and Family Living Expenditures Investigation are given at pp. 819-821 of the 1940 Year Book. The detailed findings appear in a report entitled "Family Income and Expenditure in Canada, 1937-38".

The cost-of-living index budget does not represent a minimum standard of living; it is a budget based upon actual living expenditure records of typical wage-earner families.

It is important to repeat that the index measures changes in the costs of the same level of living from month to month and year to year. The significance of this is at once apparent after comparing the rise in the index during the two years ended June, 1943, with the rise in average weekly earnings of industrial workers. In that period the cost-of-living index has risen barely 7 p.c., while the average weekly wage received by workers in eight leading industries has advanced by more than 20 p.c. Greater earnings have been reflected in greater spending despite heavier taxes and higher savings. This is borne out by figures of retail sales which were more than 20 p.c. above corresponding 1941 levels in the second quarter of 1943.

Claims that the cost of living has risen substantially in the past two years are undoubtedly due in part to confusion between higher costs resulting from higher prices, and higher costs due to greater purchases. The cost-of-living index reflects the rise in prices, but not the increase in purchases.

The cost-of-living index budget is being kept up-to-date, although still measuring changes in the same general standard or level of living. As basic changes in war-time consumption have occurred, the index budget has been adjusted accordingly. For example, with the sharp reduction in pleasure driving, the budget allowance for motor-car operation was reduced and, correspondingly, the recreation budget allowance was increased. As certain foods have become very scarce or have been rationed, budget quantities for them have been reduced and a comparable allowance added to quantities of other foods. Fresh vegetables provide an illustration of new additions to the food index. Due to the scarcity of canned vegetables, arrangements have been completed for the addition of fresh carrots, turnips and cabbage to the food budget. Likewise the curtailment in supply of canned salmon and smoked fish will be made up by additions of fresh fish.

The solid black areas superimposed on the shaded basic areas show the percentage increases that have taken place in the index over the period indicated. The over-all price ceiling became effective December 1, 1941 (indicated by the asterisk)

Concern regarding items in the index budget has been paralleled by efforts to make certain of the accuracy of price records used to calculate the budget cost. Close and continued scrutiny of retail price returns, which the Dominion Bureau of Statistics receives from its 2,000 price correspondents, has produced the belief that price reporting has been honest and that price returns are accurate. However, to remove all doubt on this point, several cost-of-living representatives have been assigned to important distributing centres across the Dominion. It is their duty to check price returns used in compiling the cost-of-living index, and to watch particularly for evidence of quality deterioration in goods for which prices are reported. It has been the Bureau's practice for many years to consider deterioration in quality as equivalent to a rise in price.

There is a tendency to think only of foods when considering the cost of living. The index shows a war-time rise of 33.6 p.c. in food prices to December, 1943, although this percentage would be higher if it were not for prices of bread and milk, which are still close to pre-war levels. As bread and milk have served as a damper on rising food costs, so have rents and miscellaneous items retarded the advance in total living costs. The miscellaneous group, despite its name, is very important, since it includes costs of health maintenance, transportation, personal care, recreation and life insurance. Due to rent control, the war-time rise in rents has amounted to only 7.8 p.c., while the miscellaneous index has risen 7.2 p.c. Considered together these two groups are more important than foods. If they had advanced by the same amount as foods, that is by 33.6 p.c., the December, 1943, cost-of-living index would be 29.4 p.c. above the pre-war level instead of 18.4 p.c.

**Cost of Living in 1942 and 1943.**—The effect of price control was clearly apparent in cost-of-living movements during 1942. The cost-of-living index advanced only 3.0 points during the year as compared with 7.8 points in 1941. The 1942 rise was due almost entirely to higher food prices. Subsidies at the retail price level on milk, butter, tea, coffee, and oranges were mainly responsible for a decline of 1.7 points in the index between December, 1942, and January, 1943, but this decrease was followed by a rise from February to September, 1943, which advanced the index 2.5 points. There was little change in the final quarter, with the December index showing a net rise of 0.5 points and a war-time increase of 18.4 p.c.

**Regional Changes in Living Costs.**—In 1941 the Bureau established war-time cost-of-living indexes for eight regional cities. These indexes, covering the cities shown in Table 4, have been patterned after the official cost-of-living series for Canada, and include group indexes for foods, fuel, rent, clothing, home furnishings and services, and miscellaneous items. The budget quantities employed for these calculations have been computed from expenditure records of wage-earner families in the year ended September, 1938 (see p. 787). The only differences between the city and Dominion indexes are the base period used and the frequency of the publication of data. For the city records, August 1939=100 instead of the five-year period 1935-39 is used and these indexes have been published for alternate months only.

Regional movements in living costs since the outbreak of war have been closely comparable to movements in the Dominion index, which advanced 18.4 p.c. between August, 1939, and December, 1943. During this period increases in the eight city indexes ranged from 15.4 to 21.4 p.c.

**Prices of Services.**—Service costs comprise approximately 19 p.c. of the family expenditure budget used in compiling the new Dominion Bureau of Statistics cost-of-living index numbers. Trends in rates for some of the more important of these services since the beginning of the new base period, 1935-39, are shown in the following table. Apart from increases in 1939 (due to taxation) in gas and electricity rates, changes in these indexes since 1935 have not been large. There have been gradual increases, however, in hospital-room rates and domestic telephone rates.

#### 5.—Index Numbers of Domestic Service Rates, 1935-43

(1935-39=100)

Item	1938	1939	1940	1941	1942	1943
Domestic rates of fuel gas.....	100.1	101.9	106.7	104.1	105.1	105.1
Domestic electric-light rates.....	98.5	103.3	103.5	103.0	102.8	97.7
Domestic telephone rates.....	100.6	100.6	101.9	103.3	103.3	103.3
Street-car fares.....	100.1	100.1	100.1	100.1	100.1	100.1
Hospital-room rates.....	101.0	102.7	102.7	104.3	106.0	111.0

### Section 3.—Index Numbers of Security Prices

Security prices long have been utilized in statistical measurements related to economic phenomena. They are generally sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus in 1928 and 1929, common-stock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends have also been at variance with other business indexes during the War of 1914-18 and the present war.

The behaviour of Canadian common-stock prices since 1914 has been quite different from that of commodity prices. During the War of 1914-18 there was no advance in security markets paralleling the pronounced inflation in commodity values. Between 1926 and 1929, however, when commodity prices were declining gradually, common stocks more than doubled in price. Both sets of prices recorded sharp declines between 1929 and 1933, and both showed recovery until 1937. During the present war, common-stock prices moved predominantly downward until the middle of 1942 when a sustained advance began.

**Preferred Stocks.**—Preferred stock prices were slow in reflecting the upturn in security markets in 1942. However, the rise in preferred issues gathered momentum during the first half of 1943 and were well above pre-war levels by October when prices received their first setback. The December, 1943, index of 115.8 was the highest year-end figure since 1929.

#### 6.—Index Numbers of Preferred Stocks, by Months, 1927-43

(1935-39=100)

<sup>1</sup> Figures for 1932 and April, 1933, were revised since the publication of the 1942 Year Book.

**Weighted Index Numbers of Mining Stocks.**—Weakness in gold stocks was responsible for a continuing down trend in the mining market until October, 1942. Subsequent gains paralleled those for industrial issues in the first half of 1943, but at that time prices remained well below pre-war levels.

## 7.—Weighted Index Numbers of Prices of Mining Stocks, by Months, January, 1942, to April, 1944

(1935-39=100)

## Section 4.—Index Numbers of Bond Yields

The exceptional requirements of the war years of 1914-18 turned the Dominion authorities to the internal market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the internal market prior to 1914 are obtainable, therefore, from provincial and municipal sources only. A record of Ontario issues from 1900 to date is available and was utilized for the first long-term bond-yield index constructed by the Bureau of Statistics. The relatively long period for which this record has been preserved makes this series of considerable value. At pp. 805 and 806 of the 1937 Year Book a statement is given showing the movements of Ontario bond yields since 1900.\* Since the War of 1914-18, however, the growing importance of Dominion financing in the domestic market has made it advisable to supplement the Ontario series with the Dominion index of long-term bond yields shown in Table 10. In 1941,

\* This index of Ontario long-term bond yields may be found in the Bureau's monthly bulletin "Prices and Price Indexes", obtainable from the Dominion Statistician.

this series was shifted to the base period 1935-39=100, and in 1942 it was revised back to January, 1937, on the basis of yields computed from a 15-year 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

## PART I.—NATIONAL WEALTH AND INCOME

### Section 1.—National Wealth

Owing to the abnormal economic conditions that have prevailed over the past ten-year period, no further official estimate for National Wealth has been made since that of 1933. This measured economic conditions at the lowest point of the pre-war depression. It is not desirable to establish another basis of national wealth until conditions have become normal. A short summary of the position is given at pp. 795-796 of the 1942 Year Book.

### Section 2.—National Income\*

During the past decade estimates of national income have emerged as a fundamental basis of reference and are employed with increasing frequency in international comparisons. No other statistical approach is so fruitful in portraying the workings of the national economy. Formerly used as a general yardstick of economic welfare, national income statistics, as now developed and with the several breakdowns, afford an excellent analysis of the economic position. In war-time they furnish a basis for judgments regarding the relative size of the war effort, the disposition of a nation's resources, the comparative severity of taxation, or the relative impact of war upon private consumption and capital accumulation.

Information as to the relative importance, trends and fluctuations of the industrial and service groups is furnished through the distribution by productive sources of income. A classification by types of payments to individuals discloses the numbers, rates and remuneration of the claimants of occupational income, as well as the flow of investment income in the form of dividends, interest and rent. A cross-classification of productive groups by types of payment and by provinces answers many questions of interest to the economist and sociologist.

\* Prepared by Sydney B. Smith, M.A., Chief, Business Statistics Branch, Dominion Bureau of Statistics, Ottawa. This subject is treated more fully in "National Income of Canada, 1919-1938, Part I" and the estimates are brought up to date regularly in the "Monthly Bulletin of Business Statistics". Other publications of the Branch are listed in Chapter XXX under the headings of "Finance" and "Business Indices".

Canada's national income is a composite of volume and price movements and is the best measure of the cyclical fluctuations that have taken place since the end of the War of 1914-18. The total, due largely to inflated prices, reached a high level of nearly \$4,600,000,000 in 1920 and fell off nearly 24 p.c. during the following year. The recovery was practically continuous until 1929 when a maximum of \$5,273,000,000 was recorded. The low point of the depression was experienced in 1933, when the national income was only 52 p.c. of the total for 1929. A temporary setback of 1938 (see Table 1) merely interrupted the advance, which has been markedly accelerated during the years of the present war.

The long-term trend of income has been slightly upward during the 22 years from 1919 to 1940, despite the unprecedented setback of the thirties when idle plant and personnel were so much in evidence. If the period of observation were extended back to 1911, the upward trend would be much more pronounced.

Comparison with the national income of the United States is made in Table 1 in order to assist in placing the Canadian income in proper perspective. The position of the United States is more favourable in regard to per capita income and income per gainfully occupied, the money income per capita averaging about 37 p.c. higher in the United States. One reason for this is the greater relative predominance in Canada of the primary activities especially agriculture. Tertiary industries including transportation, trade and service are, collectively, of greater relative importance in the United States. The average return in the service groups broadly interpreted is normally much greater than in primary activities.

1.—National Income of Canada, Compared with an Estimate for the United States, 1919-1940

Year	CANADA					UNITED STATES		
	National Income		Population	National Income Per Capita	National Income per Gainfully Occupied Person	National Income <sup>2</sup>	Popu-lation	National Income Per Capita

<sup>1</sup> Preliminary estimates of \$6.5 billion, \$7.5 billion and \$8.8 billion for 1941, 1942 and 1943, respectively, are subject to change. Due to revision in process since 1941, estimates are different from those given in Table 43, p. 797, of the 1942 Year Book.

<sup>2</sup> Statistics from 1919-1928 "National Income and its Composition", National Bureau of Economic Research, New York, p. 310, Table 43; from 1929-1942 "Survey of Current Business", U.S. Dept. of Commerce, March, 1943, p. 22, Table 14.

**Description of Method.**—The computation of the national income is, theoretically, a matter of accounting. The following formula presents a simple picture of the relationship existing in a closed economy.

$$\begin{array}{l}
 \text{Gross Operating Revenues} \\
 \text{less} \\
 \text{Cost of Materials and Overhead} \\
 \text{and Depreciation Charges}
 \end{array}
 \left. \vphantom{\begin{array}{l} \text{Gross Operating Revenues} \\ \text{less} \\ \text{Cost of Materials and Overhead} \\ \text{and Depreciation Charges} \end{array}} \right\} = \text{NATIONAL INCOME} = \left\{ \begin{array}{l} \text{Payments to Individuals (including:} \\ \text{salaries and wages, supplementary} \\ \text{labour income, net dividends, rents} \\ \text{and withdrawals of working pro-} \\ \text{priators, etc.)} \\ \text{plus} \\ \text{positive or negative savings of enter-} \\ \text{prises} \end{array} \right.$$

Based on this formula, the income of the Canadian people is defined as the value of goods and services at current prices becoming available for consumption or investment during a given period to persons residing in the country, after providing for the replacement or maintenance of the goods and services employed in production. While individuals are normally paid by cheque or cash for their share in the productive process, fundamentally income consists of the goods and services purchased by means of such payments.

The work of housewives is excluded from the calculations, being classed as a non-market service in connection with a way of life rather than an economic activity. Remunerations for non-productive and illegal pursuits, useful to certain persons but disadvantageous to society, are also disregarded. Practices, such as gambling and robbery, come under this heading. Transfer payments, while included in income payments to individuals are automatically eliminated by the inclusion of the positive or negative savings of enterprises.

Capital gains and losses, charity, gifts and direct relief payments add nothing to the general flow of economic goods. A few items, on the other hand, not passing through the market are included in estimates of national income. The most important of these are the value of home-produced food consumed on the farms and imputed net rentals on owner-occupied dwellings. The market counterparts, food consumed by non-farmers and net rentals paid for tenant-occupied dwellings are used as guides in estimating prices and rates.

**Sources of National Income.**—The flow of income is mainly a two-way process and cannot be said to commence at any one point. Yet, as income essentially results from production, it is of interest to know which particular industrial or service groups contribute the most to the nation's economy and income. The classification of national income by productive sources (Table 2) is a logical starting point, therefore, and furnishes an important body of information.

*Classification of Enterprises.*—For purposes of study, thirty original classes were combined into the seven major groups, the Bureau's statistical classification with appropriate adaptations, having been followed. Primary production comprises six industries. Agriculture includes fur farming, the woods operations of the farmer on his own property and dairy activities limited to the production of milk, butter and cheese on the farm.

Forestry includes the operations of the lumber and pulp and paper industries, as well as woods operations other than those of the farmer on his woodlot. Fish-canning and curing plants in addition to primary operations are included in the fisheries group. The activities of trappers and hunters are considered in connection with the trapping industry to the exclusion of fur farming.

As the final product is the first to which a commercial value is ordinarily assigned, the processing industries of smelting, cement, clay products, lime and salt are included in mining. The electric power group coincides with central electric stations as annually reported by the Bureau.

Secondary production embraces construction, manufactures, *n.e.s.*, and custom and repair. Construction covers operations as reported in recent years by the Bureau. Manufacturing production, *n.e.s.*, is exclusive of processing activities closely connected with three primary groups. As intimated above, sawmilling, and pulp and paper operations are included with forestry, fish canning and curing is a part of the fisheries industry, while smelting, cement, clay products, lime and salt are treated along with mining. The eight industries, for the purpose of avoiding duplication, are excluded from manufactures, *n.e.s.* Custom and repair includes thirteen industries of which dyeing, cleaning and laundry, and automobile garages are the most important. The industrial section of the Decennial Census furnishes periodical information in regard to the personnel in these industries. The Census of Merchandising and Service Establishments, 1930, provided information for estimating the operating accounts.

Considerable information regarding the following industries in the transportation-communication group: steam and electric railways, civil aviation, express, telegraphs, and telephones is obtained from annual reports of the Bureau of Statistics and outside Departments. As the railway companies also operate hotels, express and telegraph services, it is necessary to separate the records of these subsidiary activities, avoiding duplication with other groups. Water and road transport, warehousing and storage are also regarded as industries in this main group, the operating accounts being estimated on the basis of occupational data, furnished by the Decennial Census and other relevant information. Trade is subdivided into the wholesale and retail divisions, retail services being treated elsewhere.

Finance includes banking, trust companies, loan and mortgage, stock and bond dealers, insurance and real estate. Non-farm mortgage interest and net rentals, paid and imputed, are estimated for inclusion along with the real estate industry. Government income originating, including Dominion, provincial and municipal administration, is computed from the "Public Accounts". Educational, railway and other operations are eliminated so as to avoid duplication.

The service group consists of professional, educational and personal services. The latter is a composite of recreation, business service, barber shops and beauty parlours, undertaking, photography, hotels and restaurants, boarding and lodging houses, domestic and miscellaneous service.

*The Relationship of the Seven Major Groups.*—Two difficulties stand in the way of presenting an accurate measure of the relative importance of the seven major groups. Processing activities are combined with primary forestry, fisheries and mining in such a way that it is difficult to separate the primary and secondary phases. The practice has been to combine processing activities with the primary industries and to report manufacturing with the duplication eliminated.

Another problem arises from the fact that Canada in the inter-war period was a heavy debtor nation and the income flowing out of the country in the form of dividends and interest was considerable. This so-called negative balance on dividends and interest has not been classified by productive sources, but is deducted from the total income produced to obtain the income realized. The result of this procedure is that primary production, which includes agriculture, the one large industry

which pays no dividends or bond interest, is somewhat more important on this score in relation to the Canadian economy than the productive classification indicates.

The predominant position of commodity production is at once apparent. Primary production, including processing activities closely associated with forestry, fisheries and mining, accounts for 25.3 p.c. of the income in the period under review. Secondary production, including construction, manufactures, *n.e.s.*, and custom and repair, is in second place with 19.9 p.c. Trade occupies third position, accounting for 12 p.c., while service, government, transportation and finance follow in the order named. Primary production, affected by price changes, recorded an early decline from 1929 to 1932, while secondary production was more resistant to influences of depression. It is evident that finance responds tardily to cyclical fluctuations. Transportation corresponds closely with the fluctuations of the general total. The operations of government follow a more independent course than any of the other main groups, the correlation between the income originating in government and the national income being obviously low during the period. The fluctuations of trade and service conformed closely to the general pattern. Service, however, showed a lag during the declining phase from 1929 to 1933.

## 2.—Income Originating by Industrial and Service Groups, 1919-40

NOTE.—See footnote 2 to Table 1 regarding estimates for 1941 and 1942. See text p. 799 for brief explanation of the seven groups. The payments of dividends and interest to individuals in Canada holding stocks and bonds of external enterprises are deducted from the entire outward flow of such payments and the final column is obtained by deducting the balance from the total income originating.

**Classification of Payments to Individuals.**—The approach to national income from the viewpoint of payments to ultimate consumers involves many subsidiary studies relating to Canada's manpower. The volume of production, and consequently income, depends largely on the numbers at work.

The gainfully occupied may be segregated for analysis into three classes, the working proprietor, the employee and the unpaid labourer or "no-pay". The working proprietor or enterpriser is a person conducting an enterprise which he controls. Some enterprisers have other persons working for them. Others are independent workers, like many farmers, small retailers and doctors. The essential fact distinguishing the enterpriser from the employee is that he takes the risk of the enterprise and does not receive for his services a fixed rate of compensation. The difference between the "employee" and the co-called "unpaid labourer" is that the latter receives no fixed remuneration in cash, the payment being limited to a living allowance mainly in kind.

For national income purposes, the number of employees is calculated on a full-time basis, that is, it is really a statement of the number of man-years worked by those employed rather than of actual numbers engaged on any particular date.

Slightly more than one-third (33.8 p.c.) of the population was gainfully occupied on a full-time basis during the 22-year period 1919-40.

As the growth in total population was more rapid, the proportion engaged in productive enterprises was considerably less in the latter part of the period than in the years immediately following the War of 1914-18. From 1919 to 1929, the proportion of gainfully occupied ranged about 37 p.c., an important shift coming in the latest decade, with a percentage of only 31.7 p.c., in 1938. The relative increase in idle population had a significant bearing upon the problem of potential manpower for war activities, and by the end of 1942 a high percentage of the population actively participated in productive pursuits in addition to a heavy enlistment in the Armed Forces.

Statistics of payments to individuals from 1919 to 1940, are given in Table 3.

3.—National Income Payments to Individuals in Canada, 1919-40

<sup>1</sup> "Other Investment Income" is the sum of interest on savings deposits, interest from insurance and annuity contracts, pensions and annuities, mortgage interest and net rentals.

<sup>2</sup> Preliminary estimates

of \$5,873 million and \$7,090 million for 1941 and 1942, respectively, are subject to revision.

The main flow of money is from productive enterprise to individuals. Personal income is received in return for participation in the productive process. Salaries, wages and other labour income is paid for work performed and investment income in the form of dividends, interest and rents, is the remuneration for furnishing capital. The withdrawals of working proprietors represent a return from both work and ownership. Another important component is the undistributed profit or loss, retained by enterprise but regarded as an addition to, or deduction from, the income of the owners.

The size of the income of an individual measures his power of demand for goods and services. His consequent control over the economic activity of society depends upon the relative magnitude of the income.

Remuneration of employees in the form of salaries and wages, amounting to nearly 58 p.c. of the total, was the chief income payment during the period. If living allowances of so-called unpaid labour and other labour income are added, the employee's share would be raised to 61 p.c. Salaries and wages were nearly maintained in the second half of the period compared with the first, while a marked increase was shown in "other labour income" including direct relief.

The withdrawals of working proprietors, mainly farmers, retailers and professionals constituted nearly one-quarter of the total in the twenty-two years. Owing in part to the severe depression in agriculture, the withdrawals of employers and "own accounts" were one-fifth less in the second half of the period than in the first.

Investment income, including net dividends, interest from bonds, debentures and mortgages, net rentals and other returns from credit instruments, was computed at 14.6 p.c. of national income payments. An increase of nearly 13 p.c. was shown in dividends and bond interest in the last eleven years of the period over the first, while other investment income recorded a gain of more than 8 p.c. A decline of only about 3.4 p.c. occurred in income payments as a whole.

Salaries and wages were more sensitive to economic fluctuation than the remuneration of working proprietors; the latter, which receded from \$1,316 million in 1920 to \$1,017 million in 1922, recovered fairly continuously to 1929, when an intermediate maximum of \$1,112 million was reached. The low point of the second major depression of about \$715 million was recorded during 1934, successive gains then being shown until the end of the period under review.

*Types of Payment.*—Remuneration of employees in a large number of groups, is taken directly from the compilations of the annual census conducted by the Bureau. The decennial census furnishes comprehensive information as to numbers, rates and remuneration of employees. Intercensal years were estimated by means of indexes of employment and other data. Corporation and public accounts were of great assistance in estimating salaries and wages paid by finance and government.

More than one-third of a million persons were working during the census period of 1930-31 without receiving any regular remuneration in the form of salaries or wages. As many of the "no pays" were farmers' sons working at home, the income of at least a part of the group consisted of a living allowance paid principally in the form of food, clothing and housing. Apprentices in other industrial groups, while receiving no money wages, sometimes obtain appreciable compensation in commodities and services. As there is not the customary freedom of disposal, some restriction is implied in the nature of such income.

*Compensation, Pensions, Special Allowances and Direct Relief.*—Workmen's compensation, an important constituent of other labour income, (see pp. 723-727) is provided in eight of the nine provinces for injuries suffered by employees while engaged in industrial occupations. Funds are accumulated by contributions from the firms, classified into industrial groups according to occupational hazards. Contributory pensions are regarded as a component in the national income account. If a pension is paid to a retired worker out of funds contributed in part by the employee it is added to the record. Similarly, pensions in respect of war services, old age pensions, mothers' allowances, pensions to the blind and like payments are included.

Direct relief payments are disbursements to individuals that are not generally related to services currently performed by them. These payments, after allowance for general expenses, have also been distributed according to origin in the various government agencies.

The best statistics of the number of working proprietors are given in the industrial section of the decennial census reports. Intercensal years were estimated according to the number of establishments or smoothed data of employment. The rates were estimated for the census period of 1930-31 as a differential over employee rates in the same industrial and service groups. The fluctuations between census years were interpolated according to smoothed employee rates. The products of the numbers, by rates, were taken as the withdrawals of working proprietors.

Dividends paid by Canadian corporations contribute greatly to the income of individuals. For example, gross declarations amounted to about \$400,000,000 in 1930, but only a portion of the sum was received by individuals living in Canada. A considerable part was paid to other companies, and an even larger sum to shareholders living abroad. On the other hand, dividends earned and paid by external companies were received in considerable amount by Canadian shareholders. The amount of net dividends paid by Canadian companies is determined from the annual compilation of the Income Tax Division and the examination of a large sample of company accounts.

A similar procedure is followed in computing the amount of bond interest received by individuals. An adjustment for interest payments going abroad and for interest received by individuals from external sources is necessary. Unfortunately, it is not possible to allocate exactly these payments by industrial groups and the adjustment is mainly restricted to national totals.

Interest payments on mortgages are chiefly paid to three main groups making loans on real estate: (a) various government agencies, (b) financial corporations such as insurance, mortgage, trust, loan, banking and railway corporations and (c) individuals. It is possible to estimate the amount of mortgage interest paid to individuals by utilizing the decennial census and the annual reports of the Dominion and various Provincial Governments and the financial statements of insurance, mortgage, trust, bank and railway companies. Interest on mortgages held by individuals is divided into liens on farms and on non-farm property. The latter cover business and industrial property as well as residential, the total being segregated under the industrial group of real estate.

Net rentals, whether for residential or business property, are an important form of return on investment. Offsetting expenses, such as taxes, interest on mortgages, fire insurance, repairs, depreciation and costs incidental to the ownership of property, are deducted and allowances made for vacancies and non-collection of rents on rented properties to obtain the net return. An estimate of imputed rent for owner-occupied houses is also included. While such houses are consumption goods, the occupation of them involves an addition to the income of the owner-occupants.

### **Section 3.—British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad**

The latest information available under this Section is given at pp. 798-800 of the 1942 edition of the Year Book. So far as this subject relates to the balance of international payments, it is dealt with in the official report "Canadian Balance of International Payments—A Study of Methods and Results" obtainable from the Dominion Statistician, Ottawa.

## **PART II.—DOMINION, PROVINCIAL AND MUNICIPAL FINANCE**

### **Section 1.—Comparative Statistics of Public Finance\***

In planning this material, the idea of publishing combined statistics of public finance for all Governments of Canada—Dominion, Provincial and Municipal—has been constantly in mind. Reference is made in the 1942 Canada Year Book, pp. 742, 743, 782, 783, 791, to the difficulty of this task and to the efforts thus far directed towards its accomplishment.

\* Revised under the direction of Col. J. R. Munro, Chief of the Finance Statistics Branch, Dominion Bureau of Statistics.

For the present it is possible to publish reasonably current statistics of the combined debt of all Governments. Up-to-date information concerning combined revenues and expenditures is more difficult to obtain and these tables have, therefore, been discontinued in the present edition (see pp. 735-741 of the 1941 Year Book).\*

The Finance Statistics Branch of the Dominion Bureau of Statistics is now striving to establish a satisfactory basis for public finance statistics so that figures may be currently provided to form a link with and to continue the compilations of the Rowell-Sirois Commission. Further progress was made in this direction at the "Second Dominion-Provincial Conference on Provincial Financial Statistics" held at Ottawa, Oct. 18-21, 1943.†

\* The Bank of Canada has published a summary statement of revenues and expenditures of all levels of government covering the years 1930, 1934, 1938 and 1942. Statistical Summary, Bank of Canada, October-November, 1942, pp. 84-85.

† See "Report on the Second Dominion-Provincial Conference on Provincial Financial Statistics", Dominion Bureau of Statistics, Department of Trade and Commerce, Ottawa.

\* The figures of Bonded Debt and Treasury Bills shown here are the only figures of Provincial Debt comparable over the period shown.

† Figures subsequent to 1938 are not exactly comparable owing to a change in the basis of reporting.

# 1.—Composition of Total Debt of All Governments in Canada, 1941 and 1942, with Totals for 1940

NOTE.—The figures for the Dominion and the provinces are for the fiscal years ended nearest to Dec. 31, 1941, and those for municipalities for the fiscal years ended in 1941.

(000's omitted from table and footnotes)

<sup>1</sup> Consists of: (a) Government Annuities \$172,911; (b) P. O. savings bank deposits \$21,671; (c) outstanding money orders, postal notes, etc. \$6,900.

<sup>2</sup> Consists of: (a) Bank Circulation Redemption Fund \$4,478; (b) insurance, superannuation and trust funds \$192,941; (c) funded debt matured and outstanding \$6,054; (d) interest due and outstanding \$9,304; (e) stock payable on demand \$17. Excludes: (a) outstanding cheques considered as offset against cash deposits \$44,367; (b) contingent and special funds \$312,996; (c) province debt accounts \$11,920 (while these three items are included in "net debt" in the Dominion "Public Accounts", they are omitted in this table thus placing debts of all governments on a comparable basis).

<sup>3</sup> Consists of: (a) total funded debt of Canadian National Railways System as of Mar. 31, 1942, \$910,747, of which \$788,299 is guaranteed by the Dominion, \$27,847 by provinces and \$94,601 not guaranteed by either the Dominion or provinces (this latter amount includes \$1,198 assumed from Province of New Brunswick); (b) total funded debt of the National Harbours Boards \$20,601, of which \$20,443 is guaranteed by the Dominion and \$158 not guaranteed; (c) Canadian National (West Indies) Steamships Limited, bonds guaranteed by the Dominion \$9,400; (d) New Westminster Harbour Commissioners bonds guaranteed by the Dominion \$700; (e) future commitment of Canadian National Railway Company in respect of purchase price of Northern Alberta Railways Company property \$4,710.

<sup>4</sup> Consists of: (a) Bank Advances of \$124,519; (b) treasury bills of provinces \$5,432; (c) loans under the Home Improvement Loans Guarantee Act, \$6,162. In addition the Dominion is contingently liable under guarantees for: (a) deposits of Chartered Banks in Bank of Canada \$241,932; (b) indeterminate amount for loans under the National Housing Act (c) day to day margins of the Canadian Wheat Board (closed out daily); (d) bank loans guaranteed under the Seed Grain Loans Act, 1938, for which a specific guarantee has not yet been given as amount not finally determined; (e) indeterminate amount under Dominion-Provincial Taxation Agreements of provincial receipts from gasoline taxes. Major contingent liabilities listed by the Canadian National Railways System, other than the amount of \$4,710 referred to in footnote 3, are not included in this tabulation; these include capital stock of affiliated companies subject to call; contingent liabilities of the Grand Trunk Western Railroad Company in respect of bonds of the Detroit and Toledo Shore Line Railroad Company, the Toledo Terminal Railroad Company and the Chicago and Western Indiana Railroad Company; and the indirect liability in respect of Canadian National Railways pension plans.

<sup>5</sup> An analysis of provincial and municipal debts by provinces is given in Sections 3 and 4, respectively, of this Chapter.

<sup>1</sup> Includes \$320,000 Deposit Certificates.

<sup>2</sup> Consists of: (a) Government Annuities \$190,298;

(b) P.O. Savings Bank Deposits \$24,374; (c) outstanding money orders, postal notes, etc., \$4,603.

<sup>3</sup> Consists of: (a) Bank Circulation Redemption Fund \$4,016; (b) insurance superannuation and trust funds \$283,742; (c) funded debt matured and outstanding \$19,817; (d) interest due and outstanding \$14,830; (e) stock payable on demand \$16. Excludes: (a) outstanding cheques considered as offset against cash deposits \$82,340; contingent and special funds \$698,817; (c) province debt accounts \$11,920 (while these three items are included in "net debt" in the Dominion "Public Accounts", they are omitted in this table thus placing debts of all governments on a comparable basis).

<sup>4</sup> Consists of: (a) total funded debt of Canadian National Railways System as of Mar. 31, 1943, \$753,209, of which \$686,463 is guaranteed by the Dominion, \$4,592 by Provinces and \$62,154 not guaranteed by either the Dominion or provinces (this latter amount includes \$1,198 assumed from Province of New Brunswick); (b) total funded debt of National Harbours Boards \$20,505, of which \$20,347 is guaranteed by the Dominion and \$158 not guaranteed; (c) Canadian National (West Indies) Steamships Limited, bonds guaranteed by the Dominion \$700; (e) future commitments of Minister Harbour Commissioners bonds guaranteed by the Dominion \$9,400; (d) New Westminster Harbour Commissioners bonds guaranteed by the Dominion \$700; (e) future commitments of Canadian National Railways Company in respect of purchase price of Northern Alberta Railways Company property \$1,210.

<sup>5</sup> Consists of: (a) Bank Advances \$82,822; (b) treasury bills of provinces \$5,432; (c) loans under the Home Improvement Loan Guarantee Act \$2,341; (d) loans under the Home Extension plan \$9. In addition the Dominion is contingently liable under guarantees for: (a) deposits of Chartered Banks in Bank of Canada; (b) indeterminate amount for loans under the National Housing Act; (c) day to day margins of the Canadian Wheat Board (closed out daily); (d) bank loans guaranteed under the Seed Grain Loans Act, 1938, for which a specific guarantee has not yet been given as amount not finally determined; (e) indeterminate amount under Dominion-Provincial Taxation Agreements of provincial receipts from gasoline taxes. Major contingent liabilities listed by the Canadian National Railways System, other than the amount of \$1,210 referred to in footnote 4, are not included in this tabulation; these include capital stock of affiliated companies subject to call; contingent liabilities of the Grand Trunk Western Railroad Company in respect of bonds of the Detroit and Toledo Shore Line Railroad Company, and the Toledo Terminal Railroad Company and the Chicago and Western Indiana Railroad Company; and the indirect liability in respect of Canadian National Railways pension plans.

<sup>6</sup> An analysis of provincial and municipal debts by provinces is given in Sections 3 and 4, respectively, of this Chapter.

## Section 2.—Dominion Public Finance\*

**Historical Sketch.**—A sketch of public finance, from the French régime to the outbreak of the War of 1914-18, appears at pp. 742-743 of the 1941 Year Book. Up to that time, Dominion revenues had never reached \$170,000,000, while expenditures reached \$186,000,000 in the fiscal year ended Mar. 31, 1914, and even this figure was an increase of almost 29 p.c. over that of the previous year.

**Pre-War Modifications in the System of Taxation.**—A detailed sketch of the changes made in taxation from 1914 to 1926 will be found at pp. 755-759 of the 1926 Year Book, while similar information *re* tax changes in 1927 to 1929 is given at pp. 791-792 of the 1930 Year Book, for the years 1930 to 1935 at pp. 824-826 of the 1936 Year Book, for 1936-37 at pp. 837-839 of the 1938 Year Book, for 1938 at pp. 874-875 of the 1939 Year Book. A statement at pp. 811-817 of the 1937 Year Book gives complete details of the Dominion tax system as of July, 1936, and statements at pp. 836-837 of the 1938 edition give changes made in the sales tax and in the special excise tax on importations since the inception of these taxes in 1920 and 1931, respectively.

**War-time Modifications in the System of Taxation.**—Changes in 1939 are given at pp. 830-831 of the 1940 Year Book, 1940 changes at pp. 744-745 of the 1941 Year Book and 1941 changes at pp. 747-748 of the 1942 edition. The salient war-time changes are brought together below.

**The Financing of Canada's War Effort.**<sup>†</sup>—At the emergency session of Parliament in September, 1939, an appropriation of \$100,000,000 was passed to cover war expenditures, and with this was lumped the unexpended funds of the Department of National Defence that had been voted at the first 1939 session. The first War Budget was brought down on Sept. 12, 1939, by the Minister of National Revenue. This Budget included moderate increases in income taxes and substantial increases in taxes on certain luxuries and semi-luxuries, notably beverages and tobacco. An excess-profits tax was enacted to divert to the Treasury a large part of increased profits arising from war-time conditions.

When Parliament assembled in May, 1940, a War Appropriation of \$700,000,000 was passed to meet the costs in 1940-41 of the greatly extended war effort. Estimates submitted to Parliament for other expenditures amounted to \$448,000,000, showing a substantial reduction from the corresponding figure of \$525,000,000 in the previous year. The second War Budget, brought down on June 24, 1940, provided for substantial increases in taxes to meet a portion of these additional costs of war. The graduated rates of the personal income tax were raised very substantially and exemption limits were reduced. A national defence tax was introduced applying broadly to all persons receiving incomes of more than \$600 per annum. So far as possible, this tax was deducted at the source. The excess profits tax was revived and made much more severe. In order to conserve exchange, a War Exchange Tax of 10 p.c. was imposed on all imports except those from the Empire. The excise tax on auto-

\* Revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, with the exception of those parts dealing with war-tax revenue and income-tax revenue at pp. 823-825, which were revised by the Department of National Revenue.

† For more detailed information, and interpretations of these financial matters, refer to the War Budget speeches of Sept. 12, 1939 (Hansard p. 135), June 24, 1940 (Hansard p. 1011), Apr. 29, 1941 (Hansard p. 2541), June 23, 1942 (Hansard p. 3570), and March 2, 1943 (Hansard p. 870) and to speeches or statements made by the Minister of Finance in the House of Commons on May 21, 1940 (Hansard p. 83), July 30, 1940 (Hansard p. 2125), Nov. 21, 1940 (Hansard p. 311), Dec. 2, 1940 (Hansard p. 605), Feb. 18, 1941 (Hansard p. 897), and Mar. 20, 1941 (Hansard p. 1887). Reference might also be made to the speech of the Prime Minister in the House of Commons on Mar. 25, 1941 (Hansard p. 2016), and in general to the debates on the Budgets mentioned above.

mobiles was made much more severe and steeply graduated in the upper brackets. The Minister of Finance estimated that these, and the other less important changes, would produce an increase of \$280,000,000 in tax revenue in a full year. Further details are given at pp. 744-745 of the 1941 Year Book.

War expenditures were relatively low during the first eight or nine months of the War, when war activities were in the organization phase. They rose rapidly thereafter and by the end of the first year of war were running at a rate of more than \$700,000,000 per year. For the fiscal year ended Mar. 31, 1941, total war expenditures amounted to approximately \$778,000,000 of which \$26,000,000 represented outgo for items treated as active assets in the Dominion accounts.

Financial assistance was provided to Great Britain on a rapidly rising scale as the War progressed. The British Government required Canadian dollars to meet the costs of essential supplies produced in Canada. Some of these were obtained in the normal way from British exports to Canada, and Canadian tariffs on British goods were drastically reduced (in the War Exchange Conservation Acts) to make this easier. However, from Sept. 15, 1939, to Mar. 31, 1941, Britain's deficit in her balance of payments with Canada amounted to about \$795,000,000. Prior to 1941 Britain was able to send some gold to Canada for Canadian dollars; this gold was transferred to the United States in part settlement of Canada's deficit of payments with that country. The large balance of Canadian dollars that the United Kingdom needed was supplied by the Canadian Government or its agencies by two methods: about \$337,000,000, up to Mar. 31, 1941, was transferred to the United Kingdom in exchange for Canadian securities formerly owned there; the remainder was simply transferred to the United Kingdom in exchange for sterling balances accumulated to Canada's credit in London.

In the third War Budget (Apr. 29, 1941) it was necessary to make provision for war expenditures in the fiscal year 1941-42. Taxes were again increased very substantially, particularly personal and corporate income taxes and the national defence tax and a new tax in the form of a Dominion succession duty was introduced. Details are given at p. 747 of the 1942 Year Book.

To meet the rapidly expanding expenditures of the Dominion, on behalf of Britain and the other Allies, further steep increases in taxes and a plan of compulsory savings were introduced in the fourth Budget brought down on June 23, 1942. Total expenditures for the fiscal year 1942-43 were tentatively set at \$3,900,000,000—an amount considerably in excess of all expenditures made by the Government for the entire period during and immediately following the First World War. This amount included direct war expenditures of the Canadian Government in excess of \$2,000,000,000, and a credit to Great Britain of \$1,000,000,000 to enable her to make purchases of food and equipment in Canada. It was estimated that revenues from the existing tax system would be in the neighbourhood of \$1,675,000,000, leaving a gap of \$2,225,000,000 between receipts and expenditures. To partly fill this gap, new and higher rates of taxes were introduced to yield an estimated additional revenue of about \$375,000,000 (the principal tax increases were excise duties and taxes \$66 millions; personal income taxes \$115 millions; and excess profits tax \$58 millions), and a form of compulsory savings designed to produce about \$95,000,000 in 1942-43, leaving a deficit to be financed by other means of about \$1,755,000,000.

The main changes in the personal income tax were (a) the national defence tax lost its identity as a separate tax, and was incorporated into the general income tax as a flat-rate "normal" tax, although at higher rates than the former rates of

national defence tax; (b) the graduated rates of tax were steeply increased, and the credit for dependants was changed from a deduction from income to a deduction from tax; (c) it was provided that part of the total tax would be refunded after the War as a form of compulsory savings, although the taxpayer was required to pay this part only to the extent not offset by savings in other forms, such as life insurance premiums, principal payments on a residential mortgage and contributions to a pension or superannuation fund; (d) a plan was introduced for deduction of income tax at the source from all salaries and wages paid after Sept. 1, 1942, and for compulsory payments of income tax on a quarterly instalment plan in the case of other forms of income; (e) certain other changes of a less general character were made, including exemption of pensions paid to members of the Armed Forces, allowance of a deduction from income in respect of medical expenditures in excess of 5 p.c. of the income of the taxpayer.

Under the Excess Profits Tax Act, rates of tax were considerably increased with the result that corporations having profits in excess of 116  $\frac{2}{3}$  p.c. of their standard profits (average 1936-39) pay a tax at the rate of 100 p.c. and no corporation is allowed to retain, after tax, profits equal to more than 70 p.c. of its standard profits. Provision was made, however, for a 20 p.c. refund after the War for corporations to which the 100 p.c. rate of tax applies.

In the field of indirect taxation, additional revenue was found by raising existing taxes on spirits, tobacco, cigarettes, soft drinks, passenger transportation, communications and miscellaneous other articles and services. Certain new taxes were introduced at the manufacturer's level (the normal point of levying sales and excise taxes under Dominion tax law), including taxes on candy, chewing gum, photographic films and supplies, luggage, fountain pens and pencils, and pipes and other smokers' accessories, while a radical departure was made with the introduction of taxes to be collected by stamps at the retail level on a list of luxury articles, including jewellery, cut glass and crystal ware, clocks and watches, articles made wholly or in part of certain materials, and chinaware other than that used in preparing and serving food and drink. There were other minor tax innovations.

The Budget of Mar. 2, 1943, provided for revenues and expenditures considerably increased over those of any previous year and carried the principle of "pay-as-you-go" to its logical conclusion. Total expenditures for the fiscal year 1943-44 were estimated in this Budget at \$5,500,000,000. It was estimated that revenue on the basis of existing tax rates (including revenue from the refundable taxes) would amount to \$2,601,000,000 and tax changes were introduced to provide an additional \$151,200,000, bringing the revenue forecast up to \$2,752,200,000, or to almost exactly one-half of the estimated expenditure. The balance of the requirements, approximately \$2,748,000,000, was expected to be met through the sale of war savings stamps, certificates and Victory Bonds and, to some extent, through bank borrowing.

Tax changes introduced by this Budget were relatively limited. The rates on cigarettes, cigars, manufactured tobacco, raw leaf tobacco and cigarette papers and tubes were all increased. The duty on alcoholic spirits and the tax on cabarets and night clubs were raised and a one-cent increase in the postage rate was provided.

There were no changes in the general rates or exemptions under the income tax. Substantial alteration was made in the basis of taxing the oil industry, in order to encourage new development and production, and the special income tax allowances granted to members of the Armed Services were amended to provide further relief. Tax alleviation was also given to Canadian personnel of the Merchant Marine and

the R.A.F. Transport Command. Payments on a Dominion Government annuity, as a deduction from the savings portion of the tax, were also allowed. Changes made in the Excess Profits Tax Act and the customs tariff were of minor importance.

*The "Pay-As-You-Go" Plan.*—The adoption of the "pay-as-you-go" plan of income tax payment represented an important break with the traditional method of tax collection—a break that Canada was the first country to make. Under the system of deductions from income in the 1942 Budget, tax deductions were made at the source from salaries and wages, but these deductions did not relate to the current income but to the income of an earlier period. They were made from current earnings but not for current earnings. Thus, a taxpayer was, at all times, considerably in arrears to the Government for income tax, a situation that created a difficult problem for those suffering a reduction or loss of income through entering the Armed Forces, retirement from active earning or on death. In these circumstances a tax debt remained to be paid on the former higher income.

The basic step in wiping out this tax debt and bringing taxpayers up-to-date was the cancellation of 50 p.c. of the 1942 tax liability on earned income and on investment income up to \$3,000. Investigation had shown that owing to the deduction of national defence tax for the first eight months of 1942 and of the much larger amounts under the 90 p.c. plan in effect during the last four months of 1942, the majority of taxpayers had already paid at least 50 p.c., and, in many cases, considerably more than 50 p.c. of their 1942 liability. For the majority of taxpayers the 50 p.c. cancellation thus completely wiped out the tax arrears for 1942 and brought them up-to-date in their payments. All deductions made during 1943 have been for the tax on income earned in 1943.

Taxpayers will continue to file an annual return (in respect of 1943 income on or before Apr. 30, 1944) in which they will take account of deductions withheld from their income during the year, and make up whatever balance may be owing against their full annual liability or make any other adjustment that may be necessary. A new table of tax deductions introduced on Apr. 1, 1943, designed to withhold 95 p.c. of the full tax liability, will leave a smaller balance to be paid than under the 90 p.c. table previously in use.

Certain changes were also made affecting other groups. The quarterly plan of instalment payments for taxpayers, other than wage and salary earners, was made to coincide with the calendar year, while farmers will be required to pay two-thirds of their tax by Dec. 31 and the balance before Apr. 30 of the following year.

*Borrowings.*—It has been necessary for the Dominion to borrow large sums in order to meet that part of its own war expenditures which cannot be met even by heavy taxation, and also to provide funds to the United Kingdom and other countries. There have been regular borrowing operations in addition to the continuing and important War Savings Campaign and the receipts of non-interest-bearing loans from public-spirited citizens. These are summarized at p. 833, Table 22.

### Subsection 1.—The Current Balance Sheet of the Dominion

The basic pattern of the present Dominion Balance Sheet was adopted in 1920. On the asset side it shows accounts that have been classified as *active assets*; these represent cash or investments that are interest producing or have a readily realizable cash value. On the liability side it shows such liabilities as have been ascertained and brought into the accounts. No liability is shown for interest accrued

but not due, nor for current obligations incurred for supplies or services but not paid for at the end of the fiscal year. Indirect liabilities under guarantees are also not reflected in the Balance Sheet, but are set out in a special schedule. (See pp. 836-838.)

The excess of liabilities over active assets, designated the *net debt*, is analysed in a statement appended to the Balance Sheet, and is apportioned to non-active assets, which include capital expenditures and non-productive investments, and to accumulated deficits in Consolidated Fund.

<sup>1</sup> Revised since the publication of the 1942 Year Book.<sup>2</sup> Direct liabilities only. Indirect

liabilities or guarantees given by the Dominion of Canada are dealt with in Tables 25 and 26, at pp. 837-838.

<sup>3</sup> Includes funded debt matured and outstanding, stock payable on demand, interest due and outstanding and outstanding cheques.

## Subsection 2.—Revenues and Expenditures

In the fiscal year ended Mar. 31, 1943, both revenues and expenditures far exceeded any year in the history of the Dominion. Revenues increased by \$760,960,000 to \$2,249,496,000 (excluding the refundable portion of the income tax and the excess profits tax), mainly accounted for by the increase in income tax and excess profits tax collections. Revenue from direct taxes represented about two-thirds of the total tax revenue, as compared with about one-third in the last pre-war year. Of the total expenditures of \$4,387,124,000, expenditures on the war amounted to \$3,724,249,000 or approximately 85 p.c. Ordinary expenditures, covering the normal operating costs of government, increased by \$116,500,000, owing largely to an increase of \$30,900,000 in debt charges and \$73,200,000 in payments to the provinces under the Dominion-Provincial Taxation Agreements. Expenditures designed to relieve unemployment and agricultural distress, shown

in the table under "Special Expenditures" totalled \$31,300,000, just under one-half of the amount expended in the previous year. Expenditures under the heading "Government Owned Enterprises" amounted to only \$1,200,000. The over-all deficit for the year amounted to \$2,137,600,000 or over five times that of the previous year.

<sup>1</sup> Figures for 1914-18, in former editions of the Year Book did not include "Collection of revenue" and "miscellaneous". <sup>2</sup> Includes various non-enumerated items. <sup>3</sup> The expenditures shown for this and later years include items for civil government account and miscellaneous expenditures.

<sup>4</sup> First year expenditure recorded under this heading. <sup>5</sup> Figures for 1930 and following years conform with new set-up of the "Public Accounts" as established in 1936 (see p. 747 of 1941 Year Book). <sup>6</sup> Includes pensions to blind persons.

<sup>7</sup> Includes expenditures on militia, Dominion lands, and debt allowances to provinces; details of expenditure under these headings, under Public Works, and Railways and Canals are shown at pp. 846-847, 1938 Year Book. <sup>8</sup> Takes in other items including certain advances to railways: \$45,780,690 in 1920, \$109,662,655 in 1921, \$97,950,645 in 1922, \$77,863,938 in 1923, \$23,710,617 in 1924, \$9,934,453 in 1925, \$10,000,000 in 1926, \$10,000,000 in 1927; together with advances of \$5,979,556 in 1923, \$1,500,000 in 1924, \$900,000 in 1925, \$668,000 in 1926, \$426,817 in 1927, \$999,837 in 1928, and \$758,000 in 1929, to the Canadian Merchant Marine, etc.

<sup>9</sup> For details, see Table 7.

## 7.—Analysis of "Other Charges" (Shown in Table 6), Fiscal Years 1930-43

Year	Special Expenditures		Government-Owned Enterprises		Other Charges		Total
	Direct Relief, Relief Projects and Other Works	Wheat Bonus and Losses on Grain Marketing Operations, etc.	Losses Charged to Consolidated Fund	Loans and Advances Non-Active	Write-Down of Assets Chargeable to Consolidated Fund	Non-Active Accounts	
	\$	\$	\$	\$	\$	\$	\$
1930	Nil	Nil	4,308,357	8,244,950	3,731,536	17,342	16,302,185

<sup>1</sup> Includes a write-down of assets amounting to \$62,938,239.

<sup>2</sup> Reserve against estimated losses on wheat marketing guarantees applicable to fiscal year 1938-39.

<sup>3</sup> Reserve against estimated losses on wheat marketing guarantees applicable to fiscal year 1939-40 to the extent of \$27,000,000.

<sup>4</sup> Includes \$25,000,000 as reserve against possible losses on assets.

## 8.—Per Capita Revenues and Expenditures, Fiscal Years 1913-43

NOTE.—The years marked with an asterisk (\*) are Census years; per capita figures for intercensal years are based on estimated populations, see p. 141. Due to a revision in the estimates from 1932, figures from that year have been revised since the publication of the 1942 Year Book. See Tables 3-7 for the figures of revenues and expenditures on which this table is based. Figures for years from 1868 to 1912 inclusive will be found at p. 849 of the 1938 Year Book.

Year	Per Capita				Year	Per Capita			
	Revenue from Taxation	Total Revenue	Ordinary Expenditure	Total Expenditure		Revenue from Taxation	Total Revenue	Ordinary Expenditure	Total Expenditure

## 9.—Per Capita Revenues and Expenditures, by Principal Items, 1939-43

NOTE.—See Table 3 for the revenues and Table 4 for expenditures on which these per capita figures are based. Due to a revision in the estimates of population from 1932, the figures in this table have been revised since the publication of the 1942 Year Book. Dashes in this table indicate that no revenues were collected or expenditures made under the corresponding headings because the items were not applicable in the years so indicated.

<sup>1</sup> Includes pensions to blind persons. <sup>2</sup> For 1939-41, payments in connection with movement of coal and subsidies under Domestic Fuel Act only. From 1942, administration costs of the Dominion Fuel Board and subsidy payments on domestic coal used in the manufacture of steel are included. <sup>3</sup> Included under war expenditure. <sup>4</sup> Includes other items not specified.

## Subsection 3.—Analysis of Revenues from Taxation

As shown in Table 9, the revenues from customs and excise duties, the two most important sources prior to the War of 1914-18, now amount to less than a quarter of the revenue derived from taxation.

This treatment of taxation revenue is confined to excise duties and war-tax revenue since customs receipts constitute a single item in the "Public Accounts" and cannot be further analysed here. Excise statistics cover distillation of spirits and alcohol and tobacco taken out of bond and those of war-tax revenues include an analysis of the occupations and income classes of individuals and corporations contributing to the income tax, together with a statement of the income upon which taxes were assessed.

**Excise Duties.**—Excise duties proper are presented here together with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond. Excise war taxes are shown under the heading "War-Tax Revenue".

**Canadian Excise Tariff.**—The following is a statement of the Canadian excise tariff, as existing at Apr. 1, 1943:—

1. Spirits distilled in Canada, per proof gal. . . \$11-00  
    Canadian brandy, per proof gal. . . . . \$ 9-00  
    Except Spirits as follows:—
  - (a) Used in a bonded manufactory for medicines, extracts, etc., per proof gal. . . . . \$ 1-50
  - (b) Used in a bonded manufactory for perfumes, per proof gal. . . . . \$ 1-50
  - (c) Used in a bonded manufactory for vinegar, per proof gal. . . . . \$ 0-60
  - (d) Used for chemical compositions approved by Governor in Council, per proof gal. . . . . \$ 0-15
  - (e) Sold to licensed druggists for pharmaceutical preparations, per proof gal. . . . . \$ 1-50
  - (f) Distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal. . . . . Free
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal. . . . . \$ 0-30
3. Beer or Malt Liquor:—  
    Brewed in whole or part from any substance other than malt, per gal. . . . . \$ 0-45
4. Malt:—
  - (a) Produced in Canada and screened, per lb. . . . . \$ 0-16
  - (b) Imported, per lb. . . . . \$ 0-16
5. Malt Syrup:—
  - (a) Produced in Canada, per lb. . . . . \$ 0-24
  - (b) Imported, per lb. . . . . \$ 0-40
6. Tobacco, Cigars and Cigarettes:—
  - (a) Manufactured tobacco, per lb. . . . . \$ 0-35
  - (b) Cigarettes weighing not more than 2½ lb. per M, per M. . . . . \$ 6-00
  - (c) Cigarettes, weighing more than 2½ lb. per M, per M. . . . . \$11-00
  - (d) Cigars, per M. . . . . \$ 3-00
  - (e) Canadian raw leaf tobacco, when sold for consumption, per lb. . . . . \$ 0-20

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital for medicinal purposes only.

**Revenues from Excise Duties.**—In the fiscal year 1942, tobacco, including cigarettes, supplied about 52 p.c. of the revenue from excise duties.

#### 10.—Excise Duties Collected, Fiscal Years 1938-43

(As shown in the Report of the Commissioner of Excise)

Item	1938	1939	1940	1941	1942	1943
	\$	\$	\$	\$	\$	\$
Spirits . . . . .	9,844,227	9,929,585	12,478,114	17,695,951	21,994,307	31,612,277

Rye..... "	11,076,495	15,093,490	23,823,962	23,143,976	30,103,297	18,227,483
Other grain..... "	392,124	358,094	815,878	1,608,357	13,836,906	180,352,641
Totals, Grain Used... "	95,137,608	98,497,549	121,118,608	141,054,910	139,643,760	288,072,010
Molasses used..... lb.	88,986,256	73,455,645	86,165,160	116,730,154	136,970,515	48,478,178
Wine and other materials "	4,160,731	1,445,688	436,616	2,695,501	366,290	13,015,476
Proof spirits manufactured..... proof gal.	10,198,330	9,642,830	11,821,317	14,641,842	17,569,476	19,657,698

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from the low of 2,356,329 proof gal. in that year to the high of 19,657,698 proof gal. recorded in 1943.

**Alcohol and Tobacco Taken Out of Bond.**—Record amounts of malt liquor, malt, tobacco and cigarettes were taken out of bond for consumption in 1943. Spirits and cigars also indicated an increased consumption of those commodities, but have not reached the quantities recorded prior to and during the War of 1914-18.

## 12.—Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption, Fiscal Years 1921-43

NOTE.—For years prior to 1900, see 1916-17 Year Book, p. 528; for 1901-10, see 1933 Year Book, p. 840 and for 1911-20, the 1938 Year Book, p. 855.

<sup>1</sup> Figures include snuff.<sup>2</sup> Exclusive of imported spirits but inclusive of non-potable spirits.

**War-Tax Revenues.**—Amounts received from the various war taxes imposed in 1915 and thereafter instituted are given in Table 13. The taxes imposed on banks, trust and loan companies and insurance companies are collected by the Department of Finance; excise taxes, income taxes and excess profits taxes are collected by the Department of National Revenue.

### 13.—War-Tax Revenues Received by the Receiver General, Fiscal Years 1915, 1919, 1920 and 1926-43

NOTE.—Statistics for the intervening years from 1916 to 1925 will be found at p. 851 of the 1938 Year Book. Receipts for these years are included in the totals.

Year	Banks <sup>1</sup>	Trust and Loan Companies <sup>1</sup>	Insurance Companies <sup>2</sup>	Business Profits <sup>3</sup>	Income Tax	Succession Duties	Sales and Other Excise Taxes	Total War-Tax Revenue

<sup>1</sup> The figures are for special taxation only, imposed in 1915.

<sup>2</sup> Exclusive of life and marine insurance companies.

<sup>3</sup> Although this tax was not charged upon profits accruing after Dec. 31, 1920 (see 14-15 Geo. V, c. 10), belated revenue therefrom continued to be received until 1933. In 1940 the tax was re-instituted as the Excess Profits Tax.

The income tax revenue shown in Table 13 represents collections made by the Income Tax Division of the Department of National Revenue under the authority of the Income War Tax Act (c. 97, R.S.C. 1927). The Act covers more than income tax proper, as corporation taxes are coming to be regarded in a different light to those on the income of individuals. Income tax on individuals and corporations is treated separately in Part III of this chapter, at pp. 858-860.

The tax on dividends and interest (Sect. 9B of the Act) is levied at the rate of 5 p.c. on interest paid by Canadian debtors (except provinces and municipal or public bodies) in a currency which is at a premium in excess of 5 p.c. over Canadian funds and at the rate of 15 p.c. on dividends received by persons who are non-residents of Canada and on interest received from or credited by Canadian debtors to non-residents, except in the case of Dominion or Dominion-guaranteed bonds and also on interest received by a non-resident parent company from a Canadian subsidiary except where an agreement had been entered into prior to Apr. 1, 1933, for the payment of such interest in a currency other than Canadian. The tax also includes fees for copyrights and rights for the use of films, phonograph records and similar devices. The tax on rents and royalties (Sect. 27) is imposed at the rate of 15 p.c. on non-residents in respect of the gross amount of all rents, royalties, etc., for the use in Canada of real or personal property, patents or for anything used or sold in Canada. The gift tax (Sect. 88) is imposed at the rate of 10 p.c. on gifts up to \$5,000 and at rates varying from 11 p.c. to 28 p.c. on gifts from \$5,000 to \$1,000,000 or over.

The national defence tax was imposed in 1940 at the rate of 2 p.c. on the incomes of single persons earning over \$600 and at the rate of 3 p.c. on those earning over \$1,200. In the case of married persons the tax was 2 p.c. on incomes over \$1,200. In 1941 the rates were raised to 5 p.c. and 7 p.c., the exemption limit for single persons being raised to \$660. This tax was later consolidated with the individual income tax in the 1942 Budget.

<sup>1</sup> New tax imposed on cigarettes and tobacco. <sup>2</sup> Increase due largely to use of excise stamps in paying tax on places of entertainment. <sup>3</sup> Includes refunds of \$3,808,712 in 1938, \$3,787,365 in 1939, \$3,675,115 in 1940, \$4,834,909 in 1941, \$10,369,721 in 1942 and \$17,549,001 in 1942.

**Subsection 4.—Subsidies and Loans to Provinces**

**Subsidies.**—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Dominion makes certain annual payments to the provinces: these are listed below.

*Interest on Debt Allowances.*—By the terms of the union of the provinces at Confederation in 1867, the Dominion assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confedera-

tion indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of the provinces; moreover, the Dominion pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment from the Dominion to the provinces in respect of interest on debt allowances is \$1,609,386.

*Allowances for Governments and Legislatures.*—Under the terms of the Union, annual specific grants were made to the various provinces for the support of their governments and legislatures. These fixed amounts vary with the population of the provinces, according to the following scale, approved in 1907:—

Where population is—	\$
Under 150,000.....	100,000
150,000, but does not exceed 200,000.....	150,000
200,000, " " 400,000.....	180,000
400,000, " " 800,000.....	190,000
800,000, " " 1,500,000.....	220,000
Over 1,500,000.....	240,000

Aggregate annual allowances presently paid under this head amount to \$1,750,000.

*Allowances per Head of Population.*—Under the British North America Act of 1867, a grant of 80 cents per head of the population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of 2,500,000, and at the rate of 60 cents per head for so much of the population as exceeded that number. Such allowances paid to the provinces in the fiscal year 1943 reached \$8,128,688.

*Special Grants.*—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the fiscal year 1941, amounted in the aggregate to \$2,280,880 as set forth below:—

*Prince Edward Island.*—A special grant of \$195,000 less a deduction of \$39,120 (net grant of \$155,880).

*New Brunswick.*—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the province by the B.N.A. Act of 1867.

*Manitoba.*—A special grant on the basis of population amounting at present to \$562,500 per annum.

*Saskatchewan and Alberta.*—An annual sum as compensation for loss of Public Lands revenue, based on their respective populations and amounting at present to \$750,000 for Saskatchewan and \$562,500 for Alberta.

*British Columbia.*—A special grant amounting at present to \$100,000 per annum.

<sup>1</sup> See text at p. 827.<sup>2</sup> Allowances in lieu of debt.<sup>3</sup> Does not include "Additional Special Grants" (see text following).

*Additional Special Grants.\**—In addition to the above, there were other special grants paid to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia up to 1941 that were voted annually, aggregating, in the fiscal year 1941, \$5,475,000 as follows:—

	\$
Prince Edward Island.....	275,000
Nova Scotia.....	1,300,000
New Brunswick.....	900,000
Manitoba.....	750,000
Saskatchewan.....	1,500,000
British Columbia.....	750,000

Under the agreements negotiated between the Dominion Government and the provinces following the offer made in the Budget of April, 1941, these temporary special grants were replaced by fiscal-need subsidies to certain provinces and by special payments in the following amounts: Prince Edward Island, \$437,174; New Brunswick, \$371,493; Manitoba, \$600,000; Saskatchewan, \$1,500,000; Nova Scotia, \$324,122; a total of \$3,232,789.

The Dominion-Provincial Taxation Agreement Act, 1942, was the result of agreements between the Dominion and the individual provinces whereby the latter agreed to vacate the income and corporation tax fields in favour of the Dominion for the duration of the War and a limited period thereafter and the Dominion agreed to compensate the provinces therefor. Two alternative methods of compensation were proposed and these are outlined at p. 748 of the 1942 Year Book.

Under the agreements the provinces have undertaken generally, subject to certain minor exceptions, that they and their municipalities will not tax personal or corporation incomes earned after Dec. 31, 1940, or collect any other corporation taxes (with certain exceptions) becoming due and payable after Sept. 1, 1941. The agreements will continue in force for a limited period after the cessation of hostilities when the Dominion agrees to reduce its tax rates so as to permit the provinces to re-enter the tax fields that they have vacated temporarily. Any province upon thirty days' prior written notice may terminate its agreement with the Dominion on the last day of the province's fiscal year.

Annual payments to British Columbia, Alberta, Manitoba, Ontario and Quebec are based upon the revenues which the provinces and their municipalities obtained from the personal income tax and corporation tax fields during the fiscal year ended nearest to Dec. 31, 1940. Annual payments to Nova Scotia, New Brunswick, Prince Edward Island and Saskatchewan are based on the net cost of servicing the

\* In line with the Dominion-Provincial Agreements on taxation, these special grants have been disallowed since 1941 (see also p. 828).

provincial debt in the fiscal year ended nearest to Dec. 31, 1940 (not including contributions to sinking funds), less the revenues obtained by the province from succession duties in the said year. The agreements further provide for the payment of additional subsidies to Saskatchewan, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island aggregating \$3,234,437. (See also p. 828.)

The total amounts of the above described annual payments to the provinces provided for under the Act are shown in the table below. It is provided, however, that in any year there are to be deducted from such payments any net collections (after refunds to taxpayers and certain collection charges) made by the provinces on account of the taxes renounced in favour of the Dominion. The agreements limit the aggregate amounts that may be so deducted. In each case an amount equivalent to the deductions so made is to be paid to the province within thirty days after the termination of its agreement with the Dominion.

In addition, the agreements provide that the Dominion shall pay, with respect to each year of the agreements to each province, the amount by which the net receipts from gasoline taxes for said year are less than the amount received from this source in the fiscal year ended nearest to Dec. 31, 1940.\* The Dominion also guarantees provincial revenues from the sale of alcoholic beverages at the levels of the basic period, June 30, 1941-June 30, 1942.

Table 18 shows the amount of the annual payments to the provinces as compensation for their vacation of the income and corporation tax fields and also the gasoline tax revenues of each province in their respective fiscal years ended nearest to Dec. 31, 1941.

<sup>1</sup> Provincial fiscal years ended nearest to Dec. 31, 1940.

**Loans to Provinces.**—All of the provincial loans recently advanced by the Dominion have been made to the western provinces under the authority of relief legislation beginning with the Unemployment and Farm Relief Act, 1931, and these have been secured by interest-bearing treasury bills of the respective provinces, the rate being 3 p.c. since July 1, 1936. The sum total of such loans outstanding as at Mar. 31, 1944, was \$176,324,091 less write-offs of \$19,861,035, making net loans outstanding \$156,463,056.

\* Provincial Government receipts from gasoline taxes for the fiscal years 1923-42 are given at p. 860.

Housing loans made to the provinces in the years following the War of 1914-18, on the authority of Orders in Council passed in 1918 and 1919, and of the Appropriation Acts of 1920 and 1921, were completely paid off in the fiscal year 1943-44. The Province of Ontario repaid the whole of the advances in 1928, the Province of Quebec repaid in full in 1937, New Brunswick in full in 1938, Manitoba and British Columbia in full in 1941, Prince Edward Island in full in 1943 and Nova Scotia in full in 1944.

### 19.—Loans to Provincial Governments Under the Relief Acts, by Provinces, Fiscal Years 1940-44

NOTE.—Figures for 1932 (the first year such loans were made) to 1939 will be found in the corresponding tables of previous Year Books commencing with the 1936 edition.

**Subsection 5.—National Debt**

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369, as against assets of \$208,394,519, leaving a net debt of \$335,996,850. This was a comparatively small debt; it was incurred almost altogether either for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation, or was expended as subsidies to enterprises, which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

The great changes brought about in the national debt during the 27 years from 1914 to 1943 have been: (1) the enormous increase in net debt from \$335,996,850 to \$6,182,849,101; (2) the gross debt, having been incurred largely for war purposes, is not represented by corresponding assets; (3) the debt is now mainly held in Canada, \$7,441,752,802 of the funded debt being payable in Canada at Mar. 31, 1943. The interest paid per capita has increased from \$1.28 in 1868 to \$15.96 in 1943.

### 21.—Summary of the Public Debt of Canada and Interest Payments thereon, June 30, 1899, to Mar. 31, 1943

NOTE.—Statistics for 1867-1899 are given at pp. 775-776 of the 1942 Year Book.

<sup>1</sup> Based on the official estimates of population; due to a revision in the estimates from 1932, per capita figures from that year have been revised since the publication of the 1942 Year Book. <sup>2</sup> The minus sign (-) denotes a decrease. <sup>3</sup> Includes \$3,305,450, caused by the settlement of accounts with Ontario and Quebec.

<sup>4</sup> Takes into account \$5,397,503, allowed to Ontario and Quebec under 47 Vict., c. 6. <sup>5</sup> Nine months, due to change in fiscal year. <sup>6</sup> Active assets only. <sup>7</sup> Revised since the publication of the 1942 Year Book. Figures of gross debt for these 3 years shown in former editions of the Year Book did not include sinking funds or province debt accounts. <sup>8</sup> This amount represents Return on investments, which includes interest on investments, profits of Bank of Canada and Central Mortgage Bank and other items.

**Recent Funded Debt Operations.**—Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal year 1936 at pp. 845-846 of the 1936 Year Book; those of

the fiscal year 1937 at p. 837 of the 1937 Year Book; those of the fiscal year 1938 and 1939 at pp. 898-899 of the 1939 edition; those of the fiscal year 1940 at pp. 855-856 of the 1940 edition; those of the fiscal year 1941 at pp. 773-774 of the 1941 Year Book and those of the fiscal year 1942 at pp. 776-778 of the 1942 Year Book.

*War Savings Certificates, Etc.*—In addition to the Victory Loans proper, it will be observed that other Dominion loan flotations, such as War Savings and Non-Interest Bearing Certificates, are included at the end of Table 22. The Dominion initiated the sale of War Savings Certificates in May, 1940. These Certificates are sold at a discount and, if held to maturity, are equivalent to a yield of 3 p.c. compounded semi-annually. In July, 1940, the Government, in response to many public requests, authorized the issue of Non-Interest Bearing Certificates. These Certificates are dated the 15th of the month in which payment is received and mature June 15, 1945, the registered holder having the option to redeem his Certificates at par at any time after six months from the date of issue.

*Repatriation of Canadian Securities.*—In addition to providing funds for war and general purposes, it has been necessary to furnish funds for the repatriation of sterling issues held in Great Britain. These repatriation operations have the ultimate effect of making available Canadian dollars to the United Kingdom for the purchase of Canadian primary commodities and manufactured products required for the prosecution of the War. An account of operations of this nature in the period April, 1940, to October, 1941, is given at pp. 777-778 of the 1942 Year Book.

*Treasury Bills.*—In the past nine years a market for short-term treasury bills that has proven highly satisfactory has been built up in Canada. Each issue, with two exceptions (where the bills were sold direct to the Bank of Canada), has been offered for public tender. A complete list of treasury bills sold by public tender for the period Mar. 1, 1934, to Feb. 15, 1937, appears at p. 838 of the 1937 Year Book. Sales during the fiscal year 1937-38 are given in a table at p. 857 of the 1940 Year Book, for the fiscal years 1938-39, 1939-40 and 1940-41 at p. 774 of the 1941 Year Book, and for the period Apr. 2, 1941 to Apr. 1, 1942, at p. 778 of the 1942 Year Book. Treasury Bills issued between Apr. 1, 1942 and June 2, 1944, are not listed here since pressure on space precludes so doing. However, the new Table 23, at page 835, which shows Dominion Domestic Loan Flotations from the outbreak of war to 1943, summarizes the situation as regards short term treasury bills in the last item. Details of the issue in continuation of the list published at page 778 of the 1942 Year Book may be obtained on request.

## 22.—Funded Debt and Treasury Bills of the Dominion, as at Mar. 31, 1943

NOTE.—Certain qualifications as to redemption govern most of these issues; they are explained fully in the "Public Accounts" at p. 53.

<sup>1</sup> The chartered banks and the Bank of Canada converted maturing bonds into bonds of these issues, in the case of the 1941 Victory Loan conversions amounted to \$42,225,000 and in the Second Victory Loan to \$117,486,000.

<sup>2</sup> Sold to Bank of Canada in June, 1940.

<sup>3</sup> Renewal of issues of similar amounts sold during period September 1939–August 1943.

<sup>4</sup> Sold to Bank of Canada in June, 1942.

<sup>5</sup> Yield to investor if held to maturity seven and one-half years after issue date figures to June 30, 1943.

<sup>6</sup> Figures to July 31, 1943.

<sup>7</sup> It is not possible to allocate this item to purchases by the public, chartered banks and Bank of Canada.

**The Interest-Bearing Debt of Canada.**—Despite the fact that since the outbreak of the present war the interest-bearing debt of the Dominion Government has risen to the unprecedented level of \$8,271,363,610, the average interest rate on this debt has continued to decline through the war period and the figure of 2.66 p.c. at Mar. 31, 1943, was the lowest rate in over three decades. This is in contrast with the experience of the War of 1914-18 when the average interest rate on the direct debt of the nation rose from 3.368 p.c. at Mar. 31, 1913, to a high point of 5.164 p.c. at Mar. 31, 1922.

During the last fiscal year before the outbreak of the present war interest on the public debt absorbed about 25 p.c. of total government receipts. With the growth of expenditure on the War, however, interest on the debt has come to absorb a smaller portion of revenues, and in the fiscal year 1942-43 represented only about 10 p.c. of total receipts.

<sup>1</sup> Includes bonds purchased and held by the Treasury for sinking funds.  
<sup>2</sup> In 1936 an amount of \$11,827, being compensation to seigneurs, previously included under Savings Bank Deposits, Trust and Other Funds, was transferred to Bonds, Debentures, and Treasury Bills.  
<sup>3</sup> Revised since the publication of the 1942 Year Book.

**Guaranteed Debt of the Dominion.**—Besides the direct debt of the Dominion, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Dominion, of the railway lines that now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other smaller indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the

bonds of its Harbour Commissions, issued in the main for harbour improvements. Since 1932 guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank, came into force. This guarantee will require to be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities".

Under the authority of an amendment to the Canadian Wheat Board Act, 1935 (3 Geo. VI, c. 39), a price of 90 cents per bushel (basis No. 1 Northern, Fort William) was fixed as the basic price to be paid by the Canadian Wheat Board for wheat of the 1942 crop delivered to the Board on a quota basis by producers. The Board's operations in respect of the 1942 crop were financed by loans obtained from a group of chartered banks under guarantee of the Dominion Government. The amount of the guaranteed bank loans outstanding at Mar. 31, 1943, was \$66,975,656, which related mainly to the purchase of the 1939, 1940, 1941 and 1942 wheat crops.

Other guarantees also outstanding at Mar. 31, 1943, are shown in Table 26. For full details of these guarantees see Schedule "V" to the "Public Accounts" for 1943.

## 25.—Guaranteed Debt of the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914-43

NOTE.—Dashes in this table indicate that there were no guarantees of the type shown for the corresponding years.

Guarantees under Dominion-Provincial Taxation Agreements of provincial receipts from gasoline taxes at amounts received in fiscal years ended nearest Dec. 31, 1940.....	Unstated	Unstated	Canada

**Section 3.—Provincial Public Finance\***

The present war has had significant effects upon the magnitude and character of provincial revenues. Initially, the quickened tempo of economic activity expanded the yield from many of the major revenue sources. Following this the Dominion-Provincial Taxation Agreement Act, 1942,† and more recently the agreements between the Dominion and the Provinces concerning provincial profits from the sale of alcoholic beverages,‡ stabilized a large part of provincial revenues at these higher levels and resulted in a most significant change in the tax structure.

During the second year of the conflict, as the slack in resources of manpower and materials disappeared, it became increasingly evident that the war effort could not be maintained and expanded without causing a considerable upward pressure on the general price level unless the Dominion Government was prepared to drain

\* Revised under the direction of Col. J. R. Munro, Chief of the Finance Statistics Branch, Dominion Bureau of Statistics. For further statistical detail see "Financial Statistics of Provincial Governments in Canada 1940" and "1941", Dominion Bureau of Statistics.

† Dominion Statutes, 6 Geo. VI, c. 13.

‡ Budget Speech of Mar. 2, 1943.

off a much larger proportion of the purchasing power in the hands of the public. This could not be done equitably by the imposition of more severe taxes on corporate and personal incomes while the provinces also leaned heavily on these revenue sources. The Dominion, therefore, offered each province an annual payment equal to *either* (a) the revenue it had obtained from personal income and corporation taxes during the fiscal year ended nearest Dec. 31, 1940, *or* (b) the cost of its net debt service for the same period, as compensation for vacating these tax fields for the duration of the War and a certain readjustment period thereafter. Alberta, British Columbia, Manitoba, Quebec and Ontario accepted compensation on the first basis while New Brunswick, Nova Scotia, Prince Edward Island and Saskatchewan found the net debt service option more favourable. This is the major provision of the Dominion-Provincial Taxation Agreement referred to above. The provinces also argued that the rationing of gasoline imposed by the Dominion would operate to reduce their revenues from motor-fuel taxation and, by a further provision of the same Act, the Dominion Government guaranteed provincial revenues from the source at the level of the amounts obtained for the provincial fiscal years ended nearest Dec. 31, 1940.

Provincial representations were also made to the effect that the Dominion restrictions on the production of alcohol for civilian use seriously threatened revenues from the sale of alcoholic beverages. During 1943 agreements were drawn up by which the Dominion guaranteed provincial revenues from this source at the levels of a basic period, June 30, 1941–June 30, 1942.

As a result of these agreements and pre-existing arrangements, approximately 58 p.c. of gross provincial revenue (including subventions or grants-in-aid) is now either guaranteed by, or received directly from, the Dominion Government; and approximately 33 p.c. or roughly \$134,000,000 was actually received from the Dominion during the provincial fiscal years ended nearest Dec. 31, 1942.

During the first three years of the War, provincial revenues (excluding Dominion grants-in-aid) increased by more than \$75,000,000. There were concurrent increases in the expenditures on services which had been starved during the depression period but these were roughly offset by a decline of almost \$30,000,000 in the net provincial cost of relief. Consequently, many of the provinces achieved an over-all surplus. Total direct provincial liabilities declined by more than \$21,000,000 in the fiscal years ended nearest Dec. 31, 1941, and by almost \$44,000,000 in the following year.

### Subsection 1.—Provincial Revenues and Expenditures

**Provincial Revenues.**—The great increase in the functions of government during the present century forced the provinces to depend more and more upon revenue from direct taxation and the development of new sources of revenue so that the two revenue sources which had once sufficed to support almost the entire structure of provincial government, viz., Dominion subsidies and natural resources, declined in relative importance. To-day, by virtue of the war-time Dominion-Provincial Agreements described in the preceding section, a very large portion of provincial revenues again comes from the Dominion Government while a further large part is stabilized by Dominion guarantee.

Absolute and percentage yields from the major revenue sources are shown in Table 27 for the years 1913, 1940 and 1941 with estimates for 1942.

**27.—Provincial Gross Ordinary Revenues for Fiscal Years Ended Nearest Dec. 31, 1913, 1940, 1941 and 1942**

<sup>1</sup> Estimated. <sup>2</sup> Guaranteed by Dominion at levels of revenue in period June 30, 1941-June 30, 1942. <sup>3</sup> Guaranteed by Dominion at 56,735. <sup>4</sup> Approximately 39,000 of increase between 1940 and 1941 arose in Quebec where 1940 fiscal period was only 9 months due to change in fiscal year end from June 30 to March 31.

**Ordinary Revenues and Expenditures.**—Table 28 indicates the great growth in provincial revenues and expenditures since 1871. It should be noted, however, that ordinary expenditures, as shown above the rule, are only a part of total expenditures and that very substantial amounts have sometimes been capitalized. Moreover, the capitalization of expenditure has often been determined by financial necessity rather than by a consideration of the nature of the asset acquired. This latter difficulty was partially corrected in the 1940 statistics, shown below the rule, by adding to ordinary expenditures any capitalized expenditures that did not result in the acquisition of tangible provincial assets; but the reverse adjustment was not attempted. The 1941 statistics of ordinary revenue and expenditure are supplemented by a footnote which shows the extent of expenditures capitalized by the Provinces. A reasonable gauge of the over-all betterment or deterioration for that year can thus be obtained by combining these figures with those in the main body of the table and extracting debt repayment and sinking fund contributions included in ordinary expenditures as shown.

**28.—Ordinary Revenues and Expenditures of the Provincial Governments for Their Respective Fiscal Years Ended in the Census Years 1871-1931 and in Each Year from 1932-41.**

NOTE.—For provincial ordinary revenues and expenditures in all other provincial fiscal years since Confederation, see the 1932 Year Book, pp. 734-736. Figures for intervening years between 1916 and 1931 are given at p. 875 of the 1933 Year Book. For dates on which the fiscal years of the provinces end, see Table 30, p. 843.

<sup>1</sup> Includes expenditure on capital account, which is not separable. <sup>2</sup> Nine months. <sup>3</sup> Fourteen months. <sup>4</sup> To facilitate inter-provincial comparisons, the ordinary revenues and expenditures as shown in the various Public Accounts have been placed on a gross basis and certain adjustments made. For reconciliation with various Public Accounts see "Financial Statistics of Provincial Governments in Canada, 1940". <sup>5</sup> Fiscal years ended nearest Dec. 31 of the year stated. <sup>6</sup> Gross basis used to facilitate inter-provincial comparisons. Revenues exclude sinking fund earnings. Expenditures include debt repayment and sinking fund contributions as follows: P.E.I. \$203,000; N.S. \$599,000; N.B., \$552,000; Que., \$3,725,000; Ont. \$1,129,000; Man., \$654,000; Sask., \$988,000; Alta., \$13,000; B.C., \$1,748,000; but exclude capital expenditure as follows: P.E.I., \$325,000; N.S., \$564,000; N.B., \$1,189,000; Que., \$17,857,000; Ont., \$19,464,000; Man., \$87,000; Sask., nil; Alta. \$1,964,000; B.C., \$1,848,000. <sup>7</sup> Exclusive of interest paid by Hydro and other commissions. <sup>8</sup> Five months. <sup>9</sup> Six months. <sup>10</sup> Excludes \$7,136,000 implementing guarantees re Municipalities Seed Grain and Supply Act, 1937.

### Subsection 2.—Provincial Debts and Assets

**Bonded Indebtedness of the Provinces.**—The major part of the total liabilities of the Provinces is represented by bonded debt. As at the fiscal year ended nearest Dec. 31, 1940, approximately 54 p.c. of this debt was payable in Canada, 23 p.c. in New York or Canada, and 15 p.c. in London, New York or Canada. Since then the percentage payable in Canada has increased, owing to fairly substantial retirements of foreign pay bonds.

Gross provincial bonded indebtedness, which totalled \$218,870,000 in 1916, increased steadily until the close of the fiscal years ended nearest Dec. 31, 1940, but decreased significantly during the two following years. However, this decrease was not common to all provinces.

The average coupon rates shown in Table 29 vary considerably from province to province. Part of this variation is explained by differences in the average term of years for which provincial bonds are issued which, at the fiscal year ended nearest Dec. 31, 1940, were as follows: P.E.I., 11.5 years; N.S., 20.3 years; N.B., 17.8 years; Que., 15.0 years; Ont., 19.3 years; Man., 25.0 years; Sask., 22.9 years; Alta., 26.4 years; B.C., 27.9 years; all provinces, 20.0 years.

#### 29.—Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, for their Fiscal Years Ended Nearest to Dec. 31, 1940-42

NOTE.—Figures for the years 1916-30 are given at p. 877 of the 1938 Year Book and figures for 1931-39 at p. 787 of the 1942 edition.

**Total Provincial Public Debt.**—The statistics of Table 30 have been assembled on as comparable a basis as possible. This analysis has been built up on the same basis as the analysis of Dominion and municipal indebtedness shown in Tables 21 and 37, respectively, and forms part of the tabulation of bonded public debt for Canada as a whole, shown in Table 1. It is intended to continue this series in future issues of the Year Book, along with comparative totals for previous years.

## 30.—Debts of Provincial Governments for their Fiscal Years Ended Nearest to Dec. 31, 1941 and 1942 with Totals for 1940

Note.—Indirect debt excludes guaranteed bonds of certain railway companies that are now being operated by either the Canadian National Railways or the Canadian Pacific Railway.

<sup>1</sup> Includes debentures and stock.  
<sup>2</sup> Includes sinking funds held by Nova Scotia Power Commission in respect of bonds issued by the Province, 1941, \$2,116,116; 1942, \$2,863,851.  
<sup>3</sup> Includes sinking fund held in respect of \$222,597 guaranteed drainage district debenture debt assumed by Province, 1941, \$114,457; 1942, \$123,716.  
<sup>4</sup> Includes \$4,000,000 on account of debt assumed by Trustees of the Commercial Property of St. Sulphure.  
<sup>5</sup> Includes loans from public on 1941, \$456,705; 1942, \$581,969.  
<sup>6</sup> Includes cash on securities held as investments in respect thereof.  
<sup>7</sup> Includes balance of designated cash on securities held as investments in respect thereof.  
<sup>8</sup> Includes balance of purchase price of certain properties, 1941, \$639,334; 1942, \$556,557.  
<sup>9</sup> Includes actual liabilities only, such items as deferred credits, reserves and surpluses being omitted.  
<sup>10</sup> Includes railway aid certificates.  
<sup>11</sup> Includes railway aid certificates.  
<sup>12</sup> Balance of annual payments, Quebec Public Charities Fund.  
<sup>13</sup> Includes railway aid certificates.

## Section 4.—Municipal Finance\*

### Subsection 1.—The Organization and Growth of the Municipalities in Canada

Under the provisions of the British North America Act, the several provinces have jurisdiction and control over their respective organizations of municipal government. While the main types of municipalities are common to most provinces, there is little or no similarity from the standpoint of prerequisites to incorporation, either as to area or population.† In fact some provinces have no specified requirements in this regard. There are, nevertheless, two main divisions into which incorporated municipalities may be grouped—urban and rural—each of which displays more or less distinct characteristics. The former comprises the cities, towns and villages. The official designation of the municipalities in the rural group, however, varies widely as between provinces: Townships in Ontario; Districts in British Columbia; Municipal Districts in Alberta; Counties in New Brunswick; Municipalities in Nova Scotia; Parishes and Townships in Quebec; and Rural Municipalities in Manitoba and Saskatchewan.

In 1942 there were 4,014 incorporated municipalities in Canada, as compared with 4,018 in 1941. This reduction is accounted for principally by amalgamations in Alberta in the course of establishing "larger municipal units". Some of the other provinces are also considering this plan as a means towards the development of more financially and economically sound units of self-government. The number of each different class or type of municipality by provinces and for each of these years, is shown in Table 31.

It should be noted that the counties in Ontario and Quebec, which are incorporated municipalities, are comprised of local towns or villages and rural municipalities situated therein, which provide the necessary funds for the services falling within the scope of county administration. There are also 'counties' in two of the Maritime Provinces, Nova Scotia and New Brunswick, but these are basically the same as rural municipalities in the other provinces. In two of the western provinces, Saskatchewan and Alberta, there are also areas which are very much similar to rural municipalities except that they enjoy a lesser degree of local services and are not self-governing. These are called "Improvement Districts". The Provincial Governments administer the services provided in these areas and also levy and collect the necessary taxes.

\* Revised under the direction of Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues statements on "Financial Statistics of Urban Municipalities of 10,000 Population and Over", on "Bonded Indebtedness of Municipalities", and on "Assessment Valuations of Municipalities". For a list of publications see Chapter XXX, Section 1, under "Finance".

† A special bulletin "Classification of Different Types of Local Government Units in Canada" was issued by the Finance Statistics Branch of the Dominion Bureau of Statistics, in October, 1940.

**31.—Number of Municipalities in Canada, Classified by Provinces, 1941 and 1942**

NOTE.—See text immediately preceding this table for interpretation of the statistics.

<sup>1</sup> Includes 5 units of self-government officially known as "suburban municipalities".

On the basis of the 1941 Census over 10,689,000 or 93 p.c. of the population of the nine provinces was in incorporated municipalities. Table 32, showing the comparable situation for each province, gives an indication of the development of self-government from the standpoint of the local population. The 800,000 persons excluded from the population in incorporated municipalities on this basis are comprised of those in Indian Reserves and in areas that have not yet reached the stage of development where self-government is felt necessary or desirable.

**32.—Population of Incorporated Municipalities, by Provinces, 1941**

Province	Total Population	Population of Incorporated Municipalities			Percentage Municipal to Total Population
		Urban	Rural	Total

<b>Totals.....</b>	<b>11,489,713</b>	<b>6,250,619</b>	<b>4,438,777</b>	<b>10,689,396</b>	<b>93.0</b>

**Growth of Suburban Areas.**—One of the major problems of administration in the larger cities lies in the development of suburban or metropolitan areas. Although few cities of consequential size escape it entirely, there are 12 principal cities in Canada in which this type of development is particularly prevalent, e.g., Halifax, N.S.; Hamilton, Ont.; London, Ont.; Montreal, Que.; Ottawa, Ont.; Quebec, Que.; Saint John, N.B.; Toronto, Ont.; Vancouver, B.C.; Victoria, B.C.; Windsor, Ont.; and Winnipeg, Man. As defined for census purposes, these "greater" cities (see p. 120) constitute the city proper plus those satellite communities outside the city boundary that are in close economic and geographical relationship to it. Some large cities, e.g., Calgary and Edmonton have no such communities outside the boundaries of the city proper. There are 8 metropolitan areas in each of which the city proper has a population of 100,000 or over; these include a total of 108 municipalities with a population of 3,429,250.

#### TOTAL POPULATION OF EIGHT MAJOR METROPOLITAN AREAS

(Where the cities proper have 100,000 population or over)

NOTE.—For purposes of municipal statistics, this table includes the populations of a few additional areas wholly or in part included in the metropolitan areas as defined by the 1941 Census and therefore these figures do not agree with those at p. 120.

Item	1941		1931		Increase 1931-41	
	Population	p.c.	Population	p.c.	Population	p.c.
Total population of the 108 incorporated municipalities included in these areas.....	3,429,250	100.0	3,077,650	100.0	351,600	11.4
Cities proper.....	2,645,133	77.1	2,426,354	78.8	218,779	9.0
Other cities, towns and villages ..	419,405	12.2	352,226	11.4	67,179	19.1
Totals, Urban.....	3,064,538	89.3	2,778,580	90.2	285,958	28.1
Rural municipalities.....	364,712	10.7	299,070	9.8	65,642	21.9

While the total population in these areas increased 11.4 p.c. in the decade 1931 to 1941, the population of the cities proper increased by only 9.0 p.c. In the other urban communities therein the increase in population was 19.1 p.c. while in the rural municipalities the increase was 21.9 p.c. A corresponding breakdown for each of these 8 areas is given in the reports issued by the Finance Statistics Branch of the Dominion Bureau of Statistics.

**Comparability of Municipal Finance Statistics.**—The task of obtaining and presenting on a uniform basis the financial statistics of municipalities has presented a perplexing problem for some time. In the 1942 Year Book the general difficulties were reviewed and a brief outline given of the steps taken by the Bureau to improve the situation which included the publication of a "Manual of Instructions" prepared as the result of a series of Dominion-Provincial Conferences on uniform municipal statistics in 1937 to 1940. Implementation by the respective provinces of the provisions of the "Manual" is still in process so that published reports of Provincial Departments of Municipal Affairs still do not reflect the desired degree of uniformity in the presentation of municipal statistics. The data which appears in this section has, however, been compiled from existing reports supplemented with information from reports of individual cities and other sources and, while not entirely comparable from the standpoint of interprovincial comparisons, does nevertheless indicate in a general way the situation regarding municipal finance in Canada for the years stated. The incomparabilities and other deficiencies in the

information are referred to in the text or footnotes relating to each table. The various tables now included in this issue of the Year Book constitute a basic outline for the presentation of historical trends in municipal finance and will be further extended and supplemented in the future with additional material progressively as such is made available. Space will prevent the publication in this manner of any great amount of detail but such will be available through the published reports of the Finance Statistics Branch of the Dominion Bureau of Statistics.

### Subsection 2.—Municipal Assessed Valuations

**Municipal Assessed Valuations.**—The revenue resources of municipalities are limited generally to direct taxation, based on assessed valuations of real and other types of property. In 1942 the total taxable assessed valuations on which taxes were levied was \$7,731,795,387 of which approximately \$7,267,498,230 or 94 p.c. was real property. The assessment of personal property has had its ups and downs particularly in the Prairie Provinces. The Maritime Provinces, Manitoba and Alberta are the only ones at the present time in which municipalities assess and tax personal property. In Alberta only a few municipal authorities still retain this basis for tax revenue while in Manitoba it is used generally by all classes of municipalities except cities. Aside from real property, the next important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods and schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Most of the provinces have other miscellaneous types of assessment, the general nature of which will be noted from the footnotes to Table 33. It will also be noted that income assessment which formerly was employed in Nova Scotia and New Brunswick only, practically disappeared in 1942. This is a result of the operation of the Dominion-Provincial Tax Agreements whereby the provinces and municipalities have abandoned the income tax field for the duration of the War and one year thereafter, so as to leave it open to the Federal Treasury. (see p. 838.)

It should be noted that the figures in Table 33 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws which are not all similar, either in application or effect. For instance, in British Columbia, improvements cannot be taxed on a value in excess of 75 p.c. of taxable values in cities and municipal districts, or in excess of 50 p.c. of taxable values in villages, while the values actually taxed ranged from *nil* to 65 p.c. in 1942. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total values actually taxed represented approximately 44.4 p.c. of total taxable values. In addition there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be due to the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years, as in the case of Saskatchewan the results of which are referred to in the text following Table 33.

## 33.—Municipal Assessed Valuations by Provinces, 1940-42

1942.....	5	5	69,829,495	5

<sup>10</sup> Net taxable valuations of Municipal Districts not available in detail. Total exemptions have been applied against real property valuations. <sup>11</sup> Municipal Districts only. Exemptions for other municipalities not published. <sup>12</sup> Includes \$167,636,032 (1940), \$170,953,380 (1941), and \$177,991,707 (1942) valuations of improvement the total value of which was \$376,754,432 (1940), \$385,753,558 (1941), and \$401,168,674 (1942) and the maximum value at which they could be taxed was \$235,241,840 (1940), \$241,196,431 (1941) and \$250,989,749 (1942). <sup>13</sup> Consists of \$173,238,846 (1940), \$173,468,105 (1941) and \$176,510,803 (1942) valuations of exempted properties, and \$209,118,400 (1940), \$214,800,178 (1941) and \$223,176,967 (1942) exemptions of taxable improvements as referred to in footnote 12. <sup>14</sup> Does not cross-add to total. See footnote 7. <sup>15</sup> See footnotes 5, 8, 11 and 13.

While complete figures for tax-exempt properties are not available for each province, it will be noted from the information given that these have assumed relatively high proportions. It will also be noted that most provinces have shown consistent increases in taxable assessed valuations which may be attributed in large part to the stimulus to business and industry in general, arising from the War. Saskatchewan, however, shows a major reduction in total valuations which is the result of a province-wide plan of re-assessment of rural municipalities by the Department of Municipal Affairs being "the first occasion in Canada where an assessment system of such extensive proportions has ever been undertaken".\* This report further states:—

"The present method of assessment recognizes municipal boundaries only so far as municipal organization makes this necessary, as assessed values are based upon a province-wide system with one controlling agency and therein lies the only possibility of maintaining an equitable assessment within each municipality or as between different municipalities whether closely adjacent or far removed from one another."

The effect of this plan, which was commenced in 1939, is illustrated with the following comparative figures:—

Item	Taxable Assessed Valuations of Rural Municipalities	
	1939	1942
Land.....	\$831,651,124	\$680,012,665
Improvements.....	13,772,168	14,396,125
Business.....	5,789,700	6,783,769
Totals.....	<u>\$851,212,992</u>	<u>\$701,192,559</u>

By May 1, 1943, 172 rural municipalities had been re-assessed with resulting reductions in assessed valuations totalling \$154,357,000.

### Subsection 3.—Municipal Taxation

**Municipal Taxation**—Table 34 shows, by provinces, the taxes levied by municipalities in comparison with collections in 1940, 1941 and 1942, and the total taxes outstanding at the end of those years. While these figures are as nearly comparable as may be obtained from existing published reports, they nevertheless reflect some inconsistencies due particularly to interprovincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances school taxes are included in the municipal levies while in others they are not. In Prince Edward Island only 2 out of the 8 incorporated municipalities have their own individual school districts and levy and collect the school taxes. In Nova Scotia and New Brunswick only the cities, towns and villages levy and collect the school taxes. Hence the figures shown for these provinces are, generally speaking, exclusive of rural school taxes particulars of which are not available from published reports. In Nova Scotia for 1942, however, under a program for establishing "larger school units" some municipalities now levy and collect the school taxes for and on behalf of the rural school boards situated therein. A similar program has since been inaugurated in New Brunswick, so that more complete figures should be available progressively in the future as the larger school units are gradually established. The figures for Alberta are also incomplete as some municipalities levy and collect the taxes for and on behalf of local school authorities while others do not. Also, school and hospital taxes are considered as "trust" taxes and excluded from village and town levies in some instances. As a result, the tax levies for Alberta are somewhat understated in comparison with other

\* Annual report of the Department of Municipal Affairs of the Province of Saskatchewan for the fiscal year ended Apr. 30, 1941.

provinces. The deficiency in this respect would amount to something between \$1,500,000 and \$2,000,000. In Quebec, while school taxes, with few exceptions, are levied and collected by the school corporations which function independently of municipal authorities, they are nevertheless included in this tabulation for purposes of greater interprovincial comparability. It will therefore be apparent from the foregoing that the figures in Table 34, except in the case of Quebec, represent only the amount of tax levies, collections and arrears of the municipalities, and include school taxes only to the extent that such are also levied and collected by the municipalities for and on behalf of local school authorities. Taxes for schools outside incorporated municipal organizations are also not included.

### 34.—Municipal Taxation by Provinces, 1940-42

<sup>1</sup> Includes estimates in some instances as actual figures are not available.

<sup>2</sup> Not reported separately.

<sup>3</sup> Excludes cities and towns.

<sup>4</sup> Includes certain provincial and other special taxes

(see text p. 853), but excludes taxes in "Improvement Districts". <sup>5</sup> Cities only, not reported separately for other municipalities.

<sup>6</sup> See notes applying to the provinces.

<sup>7</sup> Includes \$1,243,384 compensation through Provincial Government for loss of income tax, (see pp. 838 and 849).

Because of these inconsistencies and the fact also that there are considerable differences in the division of responsibility for services between the Provincial Governments and their respective municipalities, extreme caution should be exercised in using these figures as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta, municipalities are required to levy certain taxes for and on behalf of the Provincial Government and for other special purposes for which there is no comparable situation in other provinces. The amount of such taxes which are included in the municipal levies in these two provinces, are as follows:—

<i>Item</i>	<i>1940</i>	<i>1941</i>	<i>1942</i>
	<i>\$</i>	<i>\$</i>	<i>\$</i>
<b>Saskatchewan—</b>

<b>Totals, Special Taxes.....</b>	<b>3,512,437</b>	<b>3,160,938</b>	<b>3,360,604</b>
<b>Alberta—</b>			
Social Services, Educational and Wild Lands Taxes (Provincial).....	1,046,458	1,077,694	1,045,855

There has been no marked fluctuation in the trend of municipal tax levies in Canada in these years. While most provinces show increases this does not necessarily mean an increased burden on the individual taxpayer in all instances, but more so is the result, in part at least, of the increases reflected in assessed valuations. In Nova Scotia the increase in 1942 would, to a considerable extent, be due to the establishment of "larger school units" previously referred to in this section, whereby some municipalities are now levying certain taxes which formerly were levied by rural school boards. It is also to be noted that Ontario shows consistent reductions in taxation while at the same time taxable assessed valuations have increased in the corresponding period. The most significant change that occurred during this period was the increase in tax collections in relation to total levies. In 1940 collections equalled only 101.2 p.c. of the levy for that year; in 1941 104.6 p.c. while in 1942 they further increased to 105.0 p.c. This in turn has resulted in substantial reductions in the amount of unpaid taxes outstanding at the end of these years although such are still relatively high in most provinces in relation to current year's levies. The situation for different classes of municipalities will of course vary considerably. Reference has heretofore been made to the Improvement Districts in Saskatchewan and Alberta, which although not being incorporated municipalities are, nevertheless, maintained by the Provincial Governments more or less as self-sustaining areas on the same basis. Taxation figures for these districts are excluded from Table 34 but by reason of the special significance attached thereto in relation to municipal organization in these provinces, and the fact that such may become incorporated, or part of existing municipalities at some future date, the corresponding information with respect thereto is shown in Table 35.

<sup>3</sup> Not reported separately.

## Subsection 4.—Municipal Debt

**Bonded and Other Debt.**—The rapid growth experienced by municipalities in Canada coupled with increased demands and responsibilities for improvements, schools, utilities, and other services or facilities has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 'twenties and early 'thirties. Since 1933, however, the trend has been downward. There are several important factors that have contributed to the decline in municipal indebtedness, not the least important of which has been the measure of control exercised by Provincial Government departments over capital expenditures involving the incurring of debt. In addition there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion, which along with widespread demands to ease the tax burden on real property has resulted in capital undertakings and works requiring debenture financing being severely curtailed. A further significant factor in this regard is that the greater part of the municipal long-term debt is represented by serial or instalment-type debentures, which require yearly repayments of principal. While the benefits of debt reduction are of course manifold, certain expenditures have been sorely needed in many communities for the rehabilitation of existing assets and for new improvements necessitated by the normal expansion and development that has taken place. These were sacrificed in the earlier years mainly in the interest of the taxpayer; and subsequently with the advent of the present war this policy of deferment has been continued if not extended so as to free the financial market to the needs of the Dominion Government in meeting its war financing requirements. Municipalities, however, will no doubt play an important role in post-war construction and reconstruction which should result in a resumption of capital expenditures on a fairly large scale. Having been denied, either voluntarily or otherwise, improvement programs for so long, it is anticipated that there will be a natural tendency to get these under way as soon as possible in correlation with master post-war plans of the Federal and Provincial Governments. Table 36 shows comparative figures of municipal indebtedness for 1941 and 1942, which includes temporary loans and other liabilities in addition to debenture debt. Corresponding figures for 1940

were published in the 1942 Year Book which also contains a detailed description of the basis on which the information has been compiled. Reference should be made thereto, as well as to the footnotes to the table, in interpreting the information. This is a new statistical series replacing that formerly used, which included only bonded indebtedness. A table at p. 791 of the 1941 Year Book shows the bonded indebtedness of municipalities from 1919 to 1938.

### 36.—Debt of Municipal and School Corporations for their Fiscal Years Ended in 1941 and 1942

NOTE.—Compiled from published reports of Provincial Departments of Municipal Affairs, auditors' reports and financial statements of municipalities, and information secured from other official sources. For a general explanation in regard to the items covered by this table, see text above.

<sup>1</sup> Includes \$9,271,280 net debenture debt (less sinking funds), and other capital liabilities of separate school boards and school districts in unorganized areas (debenture payments in arrears are also included in this amount). <sup>2</sup> Includes Rural Telephone, Drainage District and Union Hospital District Debentures.

<sup>3</sup> See footnote 1.

<sup>4</sup> Excludes liabilities of schools and other local boards and commissions but includes in lieu thereof amounts due by municipal revenue fund accounts to such schools and other local authorities (information required to make the necessary eliminations on this account not available from published reports) See also footnote 1.

<sup>5</sup> Includes \$4,088,267 treasury bills and \$5,577,824 other floating debt less \$843,063 sinking funds accumulated in respect thereof by the city of Winnipeg.

<sup>6</sup> Includes \$2,660,861 treasury bills. <sup>7</sup> Includes \$518,253 deferred liability due civic pension funds by city of Winnipeg.

<sup>8</sup> Includes \$1,006,045 deferred liability due civic pension funds by city of Calgary and \$472,279 sundry deposit account balances. <sup>9</sup> Includes \$1,038,801 tax prepayment deposits.

<sup>10</sup> Excludes rural schools. <sup>11</sup> None reported. <sup>12</sup> Includes \$2,072,470 balance of annual grants payable to certain institutions.

The 1941 figures reflect a decrease of \$63,739,048 in the net over-all direct and indirect debt of municipalities as compared with 1940. Retirement of debenture debt accounts for the major portion of this decrease, although substantial reductions are also shown in unfunded liabilities. In 1942 similar changes took place with a further over-all reduction of \$66,317,587 as compared with 1941. The decreases in debenture debt are due to the factors mentioned elsewhere in this

section while improved tax collections have made it possible for municipalities to avoid heavy temporary borrowings and reduce other current liabilities. It is pointed out in this respect that debenture debt figures are intended to represent only principal unmatured. Principal past due, whether in default or unpaid because of non-presentation, has been included with accounts payable and other liabilities. It is impossible to ascertain if this is a true statement of fact in all cases, however, as some reports do not indicate the exact situation. The more significant items available in this regard are as follows:—

### 37.—Debenture Principal and Interest Due

## PART III.—OUTSTANDING DEVELOPMENTS IN THE TAXATION FIELD

Prior to the War of 1914-18, the Dominion Government was able to finance its expenditures through the imposition of such indirect taxes as customs and excise duties. There were minor direct taxes imposed for other purposes than revenue and these, in the fiscal year 1914, amounted to less than 1.5 p.c. of the total revenue from taxation collected by the Dominion Government.

To-day the significance of direct taxation is exemplified by the fact that direct taxation collected by the Dominion Government accounts for about 64 p.c. of total taxation.

The unprecedented financial demands of the War of 1914-18 began to be felt by 1915 and between 1915 and 1917 the Dominion entered the direct taxation field with the imposition of taxes on banks, trust and loan companies, insurance companies and business profits. The income tax was introduced in Canada in the latter year and has increased in importance until to-day it is the central feature of the

direct taxation program. The outbreak of the Second World War led to the entry of the Dominion into the fields of succession duties and gasoline taxes (the latter are semi-direct), which had hitherto been imposed exclusively by the provinces. These new taxes were introduced in the Budget of April, 1941. Provision was made for compensating the provinces for losses in gasoline tax revenue caused by the Dominion Government's rationing program.

In 1941 the Dominion offered to compensate the provinces if they would vacate the personal income and corporation tax fields for the duration of the War, as outlined at pp. 838-839. The revenue received by the Dominion from such direct taxes of lesser importance as those on banks and insurance companies, and on excess profits is shown in the Table at p. 824.

The Budget of June, 1942, imposed further semi-direct taxes by the imposition of a duty of 20 p.c., payable by means of excise stamps, on cover charges, charges for meals, etc., in night clubs and similar places of entertainment and of 25 p.c. on purchases of luggage, clocks and watches, jewellery, cut glass and china, fountain pens, photographic films and other luxury articles. The March, 1943, Budget raised the rates on tobacco, cigars and cigarettes. The duty on alcoholic spirits and the tax on cabarets and night clubs were raised and a one-cent increase in the postage rate was imposed.

The place that direct taxation has assumed in the general taxation picture and its incidence on the purse of the ordinary taxpayer has made it advisable to give this subject separate treatment but this should not detract attention from the important place that indirect taxation, through customs, excise and sales taxes, still holds in the taxation burden that the individual taxpayer is called upon to bear.

In order to present a clearer picture of the main elements of direct or semi-direct taxation, Part III has been divided into three Sections, dealing with income tax, gasoline taxes and succession duties, respectively.

Such historical statistics of provincial government revenues from taxes on individual incomes and on corporations as are available have not been included under Section 1. These statistics have been published in earlier Year Books and in view of the vacation by the provinces of this field for the duration of the War, republication seems not to be necessary. It is the aim of this Part to direct attention to the incidence of direct taxation at the present time rather than to present an historical review of the subject. A table of receipts from provincial corporation taxes from 1932 to 1937 appears at p. 786 of the 1942 Year Book.

### Section 1.—Income Tax \*

The income tax was instituted in 1917, as a part of what is still known as war-tax revenue. Table 14, p. 825, war-tax revenue table of Department of Finance, shows the total receipts under this item for the fiscal years 1919, the first year for which collections were made, to 1943.

It is a war tax in name only, for even before the outbreak of the present war it had become a permanent and important part of the taxation structure, and the chief source of raising ordinary revenue (see Table 3, p. 814). It is, of course, destined to play a still more important role in the raising of revenue to meet the unprecedented expenditures now being made. In many respects, it is an ideal form of direct taxation; the incidence is admittedly fair and just and the machinery for the collection of this tax already exists.

In editions of the Year Book prior to that of 1941, statistics of income tax were presented on a basis of income tax paid; in the 1941 edition a new presentation was given, on the basis of tax assessed. The 1942 edition carried on the new

\* Revised under the direction of the Deputy Minister of National Revenue for Taxation by M. F. Sprcott, B.Com., Chief Statistician.

series giving data of taxes assessed in the fiscal year 1941, the figures relating, in the main part, to incomes earned in the calendar year 1939. The advent of war with its increased taxation and provision for the prepayment of taxes has made a new system desirable and the Income Tax Division of the Department of National Revenue is introducing an up-to-date system of recording statistics: the first data to be presented will be those for the taxation year 1941, i.e., taxes assessed on incomes of the calendar year 1941.

Pending the completion of these figures, the usual analyses of incomes by income groups and occupation groups has been suspended. Table 14, p. 825, shows the total collections under the Income War Tax Act, under the headings of individual and corporation income taxes, tax on dividends and interest, tax on rents and royalties, and gift tax. Table 1 analyses the income tax collections by provinces and Table 2 performs the same function for the tax on dividends, etc. Table 3 presents statistics of the number of assessable income tax returns filed for the calendar years 1935-41.

<sup>1</sup> Calendar year in which income earned in the case of individuals and, for corporations, the business year ending within the calendar year.

## Section 2.—Gasoline Taxes

The provincial gasoline taxes can only be termed direct taxes in that the consumer knows exactly the amount of tax he is paying when purchasing gasoline. The Dominion tax is assessed against the producer or importer but the retail price was increased to cover the tax. These taxes have been brought together in this section on account of the large number of Canadian motorists who are directly affected, while the non-motoring portion of the population is affected by the effect of higher gasoline taxes on delivery costs and bus transportation.

The present rates of gasoline tax, per gallon, are: Dominion, 3 cents; Prince Edward Island, 10 cents; Nova Scotia, 10 cents; New Brunswick, 10 cents; Quebec, 8 cents; Ontario, 8 cents; Manitoba, 7 cents; Saskatchewan, 7 cents; Alberta, 7 cents; British Columbia, 7 cents; Yukon, 3 cents.

There are certain refunds and exemptions allowed by the various taxing authorities and these are set out in the Bureau's publication "The Highway and the Motor Vehicle in Canada".\*

\* Obtainable from the Dominion Statistician, Ottawa, price 25 cents.

4.—Provincial Government Receipts from Gasoline Taxes, Respective Fiscal Years Ended in 1923-42<sup>1</sup>

NOTE.—For statistics of gallonage on which these taxes are levied, see p. 603. For periods covered by fiscal years, see headnote to Table 5, p. 862.

<sup>1</sup> Figures below the rule are for the fiscal years ended nearest to Dec. 31 of the year stated.

Figures for 1923-40 revised since the publication of the 1942 Year Book.

<sup>2</sup> First year gasoline tax reported in this province.

<sup>3</sup> Five months.

<sup>4</sup> Eight months.

<sup>5</sup> Actual net receipts for fiscal years ended nearest Dec. 31, 1940.

<sup>6</sup> Provincial gasoline tax revenues of subsequent years are guaranteed at this level by the Dominion Government (6 Geo. VI, c. 13).

<sup>7</sup> Three months.

<sup>8</sup> Fourteen months.

<sup>9</sup> First year gasoline tax reported in this province.

The Dominion Government, in the Third War Budget of Apr. 29, 1941, imposed a tax of 3 cents per gallon on gasoline. Proceeds from this tax amounted to \$24,752,396 and \$24,897,924 in the fiscal years 1942 and 1943, respectively.

### Section 3.—Succession Duties

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. The date of their introduction into the other provinces are given at pp. 863-871.

Succession duties have grown to be an important if fluctuating part of provincial revenues and Table 5 shows the receipts from this source from 1921.

In 1941, the Dominion, under the pressure of war finance, entered this field of taxation. The Dominion Succession Duty Act was enacted as c. 14 of the session of 1940-41. Certain amendments were made to the Act by c. 25 of 1942. The Act is administered by the Department of National Revenue. Dominion receipts from succession duties for 1942 and 1943 are included in Table 5.

The entry of the Dominion into the field has complicated the problems as they present themselves to the executors and administrators of estates subject to duties. Not only do difficulties of the application of different schedules of rates to the same estates arise, but also questions of where assets are held, and whether and where they are transferable. Certain points have not yet been completely ironed out by the courts. Moreover, apart from the evident double succession duties chargeable by the Dominion and the province in which the owner lived and died, duties may be charged on the same property by more than one province.

The four classes of beneficiaries that are established under Dominion law (see p. 862) have, for example, specific rates that change with each classification. For Ontario, there are three different classes of beneficiaries (see p. 867) with quite different rates of duties attached to each class. It is common practice both in the Dominion and the provinces for an initial rate to be charged based on the total value of the estate and an additional rate based on the bequest received by each individual. Thus, in the case of the Dominion, a person who receives a bequest of \$50,000, say, out of an estate of \$500,000 is charged the rate for a \$500,000 estate plus an additional rate for \$50,000, and the total rate is then applied in calculating the tax on his bequest of \$50,000.

A recent decision from Osgoode Hall, Toronto, has declared that shares of an Ontario company owned in one State of the United States and transferable in another are not subject to Ontario duties. This might become established as a precedent for the other provinces and for the Dominion on the one hand, and for United States authorities on the other. The latter country might be led to take the same position as regards United States securities held by Canadians, but as yet the situation is not clear and duplication of succession duties by the several authorities directly or indirectly interested continues to be a source of much concern.\*

Under these circumstances, the difficulties of working out succession duty tables so as to show the combined effects of Dominion and provincial duties is realized. The best that can be done is to choose typical estates in the main classes laid down in the legislation and give a picture of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting to the student of this subject a general picture of the incidence of succession duties in Canada under conditions at present existing.

\* Terms of a convention between Canada and the United States to eliminate overlapping of taxes and duties on estates were announced in the House of Commons on June 16th by the Minister of National Revenue.

### 5.—Dominion and Provincial Receipts from Succession Duties, Respective Fiscal Years Ended in 1921-43

NOTE.—The fiscal years of the provinces are as follows: P.E.I., Dec. 31; N.S., Sept. 30 prior to 1935 and Nov. 30 thereafter; N.B., Oct. 31; Que., June 30 to 1940 and Mar. 31 in 1941; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man. and Sask., Apr. 30; Alta. and B.C., Mar. 31.

<sup>1</sup> Includes "Funds in lieu of Succession Duties".

<sup>2</sup> Includes "Succession Duties Act" fees.

<sup>3</sup> Eight months.

<sup>4</sup> Three months.

<sup>5</sup> Fourteen months.

<sup>6</sup> Five months.

<sup>7</sup> Nine months.

<sup>8</sup> Figures below the rule are for fiscal years ended nearest to Dec. 31 of year stated.

<sup>9</sup> Ten months; Act came into force June 14, 1941.

**Dominion Duty.**—Beneficiaries are divided into four classes as follows:—

- (1) Widow or dependent child or dependent grandchild.
- (2) Husband; parent; grandparent; child over 18, not infirm; son- or daughter-in-law.
- (3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
- (4) Others.

No duty is payable on estates not exceeding \$5,000 or on bequests up to \$1,000 to any one individual, nor is duty levied on gifts to the Dominion or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by Allied Nations for war service nor on insurance moneys or annuities if the assured or person with whom contract was made was domiciled outside of Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service and bequests to non-profit charitable organizations in Canada are exempt up to 50 p.c. of the aggregate net value of the estate.

Widows are exempt up to \$20,000, dependent children \$5,000 each and, in cases where dependent children do not benefit, the widows' exemption is increased by \$5,000 for each child who does not benefit. In the case of dependent orphan children, there is a further exemption of \$15,000 (in addition to \$5,000) divisible

proportionately among such orphans according to the number of them and the value of each individual benefit. Duty is payable on the excess only when the limit is passed.

Gifts made during the lifetime are exempt if the transfer was carried out before Apr. 29, 1941, and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income War Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in the tables of the incidence of combined Dominion and provincial duties which follow.

**The Incidence of Combined Dominion and Provincial Succession Duties.**—The tables are intended to show, for each province, the effect of the combined Dominion and Provincial duties on estates left to typical individuals, and in this way to present a comparison of the combined duties payable by such individuals for estates ranging from \$20,000 to \$1,000,000. The final rate of provincial duty shown is, in most cases, the result of the combination of two or more series of rates. It would be impossible in the Year Book to cover the many different classifications, exemptions and saving clauses to be found in the legislation of the nine provinces. The specific cases that have been worked out are selected to give a general picture of the effects of succession duty taxation across Canada. In every case the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir. The reader is referred to the legislation and to the taxing authority shown under each provincial heading for more complete information.

*Prince Edward Island.*—Succession duties were first imposed in 1894 by c. 5 of the Statutes of that year. The current legislation is c. 59 of 1940, as amended by c. 18 of 1942, and the authority administering the Act is the Succession Duty Officer, Tax Branch, Department of the Provincial Treasury, Charlottetown.

Beneficiaries are divided into three classes, as follows:

- (1) Widow with dependent child; dependent child under 21 or infirm.
- (2) Widow without dependent children; child not dependent; father; mother; brother; sister; grandchild; son- or daughter-in-law; step-child.
- (3) Others.

Estates passing to persons in Class (1) are exempt to the value of \$10,000 and to those in Class (2) up to \$5,000. Where nephews and nieces are the beneficiaries of an estate with an aggregate value not exceeding \$20,000, one-half of the ordinary duty is charged. Duty is payable on the whole amount when the exemption limit is exceeded. No duty is levied on bequests for religious or charitable purposes to be carried out in the province, or by a resident thereof or by a corporation with head office in any of the three Maritime Provinces which carries out charitable, religious or educational bequests in Prince Edward Island.

### 6.—The Incidence of Dominion and Prince Edward Island Succession Duties on Certain Estates

Class	Aggregate Net Value	Dominion Duty			Provincial Duty			Combined Duties

	50,000	50,000	7.35	3,675.00	50,000	20.00	10,000.00	13,675.00
	100,000	100,000	10.35	10,350.00	100,000	20.00	20,000.00	30,350.00
	300,000	300,000	16.35	49,050.00	300,000	20.00	60,000.00	109,050.00
	500,000	500,000	19.35	96,750.00	500,000	20.00	100,000.00	196,750.00
	1,000,000	1,000,000	22.35	223,500.00	1,000,000	20.00	200,000.00	423,500.00

<sup>1</sup> The provincial age limit for dependent children is 21.

*Nova Scotia*.—Succession duties were first instituted in 1892 (c. 6, 1892). The latest consolidation of the provincial legislation appears in c. 18 of the Revised Statutes of 1923. Numerous amendments have been made since that time. Full information may be obtained on application to the Supervisor of Succession Duties, Department of the Attorney General, Halifax.

Beneficiaries are divided into four classes, as follows:—

- (1) Widow with dependent child; or dependent child.
- (2) Widow without dependent child; child not dependent; husband; parent; grandparent; grandchild; son- or daughter-in-law.
- (3) Other lineal ancestor or descendant; brother, sister or their child or grandchild; uncle, aunt or their child or grandchild.
- (4) Others.

Estates not exceeding \$5,000 are exempt from succession duty and this exemption is increased to \$10,000 in the case of beneficiaries falling into classes 1 or 2 above. Bequests for religious, charitable or educational purposes within the province are exempt up to \$25,000. In all cases, duty is payable on the whole amount when the exemption limit is passed.

7.—The Incidence of Dominion and Nova Scotia Succession Duties on Certain Estates

<sup>1</sup> Exclusive of 10 p.c. surtax.

<sup>2</sup> Exclusive of provincial surtax.

*New Brunswick.*—Succession duties were first instituted in 1892 by c. 6 of the Statutes of that year. The current legislation is c. 12 of 1934, as amended, and a consolidation of the various Acts has been issued under date of May 1, 1942. Full information may be obtained on application to the Superintendent of Succession Duties, Department of the Attorney General, Fredericton.

Beneficiaries are divided into three classes, as follows:—

- (1) Wife; child; husband; parent; son- or daughter-in-law.
- (2) Other lineal ancestor or descendant; brother, sister or their children or grandchildren; uncle, aunt or their children or grandchildren.
- (3) Others.

No duty is payable on estates not exceeding \$1,000. This exemption is extended to \$25,000 where the beneficiary falls under Class (1) above and to \$5,000 in the case of those in Class (2). Duty is payable on the whole amount when these limits are passed. Bequests for religious, educational or charitable purposes within the Province are exempt from duty.

<sup>1</sup> No duty on estates up to \$25,000 devised to near relations.

*Quebec.*—Succession duties were first instituted in 1892, by c. 17 of the Statutes of that year. The current legislation is c. 18 of 1943 and full information may be obtained from the Collector of Succession Duties, Provincial Revenue Office, Quebec.

Beneficiaries are divided into three classes, as follows:—

- (1) The wife or husband; children or grandchildren; parents or grandparents; son- or daughter-in-law; father- or mother-in-law; step-parents or step-children.
- (2) Brothers, sisters or their descendants; uncles or aunts and their children.
- (3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed \$10,000. This sum is increased by \$1,000 for each child who has survived or has left surviving descendants. To beneficiaries in Class (2) no duty is payable on bequests up to \$1,000 and the same exemption is extended to beneficiaries in Class (3) who have been in the employ of the testator for five years or more. No duty is payable on legacies for religious, charitable or educational

purposes in Quebec and the same privilege is extended to legacies for similar work outside the Province, provided that the Province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws.

*Ontario.*—Succession duties were first instituted in 1892 by c. 6 of the Statutes of that year. The current legislation is c. 1 of 1939 (Second Session) as amended, and full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
- (2) Brother; sister; nephew; niece; uncle; aunt; cousin; child of nephew or niece.
- (3) Others.

No duty is payable on estates exceeding \$5,000 in aggregate value, nor on estates up to \$25,000 devised to persons in Class (1), nor on those up to \$10,000 devised to persons in Class (2). Bequests to employees of five years standing are exempt up to \$1,000. Bequests for religious, charitable or educational work to be carried out within the Province, and to certain approved patriotic organizations, are also exempt from duty.

*Manitoba.*—Succession duties were first instituted in 1893 by c. 31 of the Statutes of that year. The current legislation is c. 201 of the Revised Statutes of Manitoba, 1940, as amended, and full particulars may be obtained on application to the Administrator, Succession Duties Division, Department of the Provincial Treasurer, Winnipeg.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; husband; child; parent.
- (2) Grandparent; grandchild; son- or daughter-in-law; brother or sister or child of such brother or sister.
- (3) Others.

A general exemption of \$5,000 is allowed beneficiaries in Class (1), whether or not they reside in the Province, but this amount is extended to \$25,000 when the beneficiary is resident in the Province; duty is payable on the whole when the limit is passed. No duty is payable on estates not exceeding \$1,500, nor on bequests to individuals up to \$300. Property devised for religious, charitable or educational purposes within the Province, up to \$2,000 for any one of such purposes, is exempt and any surplus over \$2,000 for such purposes is subject to Class (2) rates. A further exemption of \$5,000 to a widow, or child under 18, or both, and of \$10,000 to a widow with more than one child, or two orphan children under 18, is granted in the case of money received as the proceeds of an insurance policy.

Exclusive of surtax of 15 p.c. on amount of duty.

<sup>2</sup> Exclusive of surtax on provincial duty.

*Saskatchewan.*—Succession duties were first instituted in the Province of Saskatchewan at the time of its origin in 1905. They were introduced in the former Northwest Territories by c. 5 of the Statutes of the Second Session of the Northwest Legislature in 1903 and the legislation was continued in force under the provisions of the Saskatchewan Act. The current legislation is c. 50 of the Revised Statutes of 1940, and full information may be obtained on application to the Director, Succession Duty Division, Revenue Building, Regina.

There are three classes of beneficiaries, as follows:—

- (1) Widow; child; husband; parent; grandchild; son- or daughter-in-law.
- (2) Other lineal ancestor; brother, sister or their descendant; brother or sister of parent or their descendant.
- (3) Others.

Exemptions (with duty payable on the whole when limit is passed) are \$15,000 to those in Class (1), \$2,500 to those in Class (2) and \$1,000 in the case of others.

Additional rates of duty are imposed on the whole estate when the deceased was not a resident of the Province and on shares of individual beneficiaries not domiciled in Saskatchewan.

*Alberta.*—Succession duties were first instituted in the Province of Alberta at the time of its origin in 1905. They were introduced in the former Northwest Territories by c. 5 of the Statutes of the Second Session of the Northwest Legislature in 1903 and the legislation was continued in force under the provisions of the Saskatchewan Act. The current legislation is c. 57 of the Revised Statutes of Alberta, 1942, and full information may be obtained on application to the Collector of Succession Duties, Department of the Attorney General, Edmonton.

Beneficiaries are divided into four classes, as follows:—

- (1) Widow; husband; child; parent; grandparent; son- or daughter-in-law; resident in the Province.
- (2) Persons of the above degrees of affinity not resident in the Province.
- (3) Other lineal ancestor; brother; sister or their lineal descendant; brother or sister of parent and their descendants.
- (4) Others.

No duty is levied on estates the net value of which does not exceed \$1,000 and estates up to \$15,000 are exempt when the beneficiaries fall into Class (1), above. Gifts to the University of Alberta for educational purposes and property passing to that institution under the provisions of the ultimate Heir Act are also exempt from duty. Other bequests for religious, charitable or educational purposes within the Province are exempt up to \$2,000 for any one bequest.

<sup>1</sup> Exclusive of 20 p.c. surtax on amount of provincial duty.

<sup>2</sup> Exclusive of provincial surtax.

*British Columbia.*—Succession duties were first instituted in 1894 by c. 47 of the Statutes of that year. The current legislation is c. 270 of the Revised Statutes of 1936, as amended, and a consolidation of the Act and its amendments to Apr. 1, 1940, may be obtained on application to the King's Printer, Parliament Buildings, Victoria.

In British Columbia beneficiaries are divided into three classes:—

- (1) Widow; child; husband; father; mother; grandchild; son- or daughter-in-law.
- (2) Grandfather; grandmother; uncle; aunt; cousin; brother; sister; or descendant of brother or sister.
- (3) Others.

An exemption of \$20,000 is granted where the estate passes to a beneficiary in the first class, duty being payable on the excess only when this limit is passed, and there is a further exemption to beneficiaries in this class on insurance up to \$25,000. No duty is payable on estates not exceeding \$1,000 in value and bequests for religious, charitable or educational purposes within the Province are likewise exempt from duty.

In this Chapter are assembled the statistics regarding financial institutions and transactions, other than those pertaining to insurance: the latter are dealt with separately in Chapter XXV.

## PART I.—CURRENCY AND BANKING

### Section 1.—Historical Sketch

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada, tracing certain features of the central banking system that finally led up to the establishment of the Bank of Canada. In chronological order these were:—

1. *Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.

2. *The Canadian Bankers' Association*, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.

3. *The Central Gold Reserves*, established by the Bank Act of 1913.

4. *Rediscount Facilities*, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

## Section 2.—The Bank of Canada

### Subsection 1.—The Bank of Canada Act and Its Amendments

The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to a wholly government-owned one is given at p. 800 of the 1941 Year Book.

The Bank is authorized to pay cumulative dividends of  $4\frac{1}{2}$  p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Dominion and the provinces without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity: short-term securities of the Dominion or provinces may be rediscounted. It may also buy and sell short-term securities of British Dominions, the United States or France without restriction, if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency, and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Dominion or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept from the Dominion or Provincial Governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act, deposits that shall not bear interest. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at p. 879.

The Bank of Canada Act (c. 43, Statutes of 1934 and amendments) provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold reserve requirement has been temporarily suspended. The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in gold-standard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable in London or New York, or in a gold-standard country, less any liabilities of the

Bank payable in the currency of the United Kingdom, the United States of America or a gold-standard country. In accordance with the terms of the Foreign Exchange Acquisition Order, 1940, the Bank of Canada sold foreign exchange with a Canadian dollar value of \$27,734,444 to the Foreign Exchange Control Board.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities, payable in Canadian dollars, in the form of deposits with and notes of the Bank of Canada.

The Bank acts as the fiscal agent of the Dominion of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors, and he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected with terms as follows: one director, until the third annual general meeting (1938), two, until the fourth (1939), two, until the fifth (1940), and two, until the sixth annual general meeting (1941). Former directors continued in office when the Government took over the management of the Bank but directors are now appointed by the Minister of Finance with the approval of the Governor in Council for terms of three years. There are now eleven directors. In the transaction of the business of the Bank each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an ex officio member of the Board of Directors and of the Executive Committee, but is without vote.

The Governor alone, or in his absence the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

## **Subsection 2.—The Bank of Canada and Its Relationship to the Canadian Financial System**

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank and its duties as the Government's banker. An article on the war-time functions of a central bank appears at pp. 803-806 of the 1942 Year Book.

### Subsection 3.—Bank of Canada Operations

The expansion of Bank of Canada liabilities and assets has provided for increased Bank of Canada notes in active circulation (as the chartered bank-note issue is limited and is gradually being retired) and has enlarged the cash reserves of the chartered banks. The principal changes in Bank of Canada assets since April, 1938, have been the rise in investments, partly to replace the gold and foreign-exchange holdings transferred to the Foreign Exchange Control Board under the terms of the Exchange Fund Order and Foreign Exchange Acquisition Order, dated Apr. 30, 1940, and the fluctuations in holdings of sterling exchange through which the Bank has temporarily financed Canadian dollar requirements of the Foreign Exchange Control Board.

<sup>1</sup> From the Bank's Annual Statement.

<sup>2</sup> The Exchange Fund Order, 1940, authorized the transfer of the Bank's gold holdings to the Foreign Exchange Control Board and temporarily suspended the requirement for a minimum gold reserve.

### Subsection 4.—The Proposed Industrial Development Bank

NOTE.—A Bill for the establishment of this Bank was presented to Parliament in March, 1944. At the time this section of the Year Book was sent to press, the draft legislation had received second reading and had been referred to the Banking and Commerce Committee.

Functions of the proposed Industrial Development Bank were outlined in a statement made in the House of Commons on March 2 by the Parliamentary Assistant to the Minister of Finance.

The Bank represents one of the methods to be used by the Government in preparing for a high level of employment and income after the War. To provide a high level of employment considerable peace-time industrial development will be required. The reconversion of present war-time industrial capacity to a peace basis, erection of new machinery, and the application of new products and techniques developed during war time will require a great volume of new financing. Three presently existing sources may be looked to for meeting, in part, this situation:—

- (1) The war-time reserves of industry. These resources alone will be far short of requirements.
- (2) Existing facilities for the provision of credit through the chartered banks. These, however, will probably be limited to short-term commitments.
- (3) The severely limited scope of the investment market. This, however, cannot take care of small enterprises.

The proposed Bank will supplement and fill gaps left by the above sources. It will extend credit to industrial enterprises considered economically sound if such credit cannot for any reason, be obtained from other sources, thus supplementing rather than replacing the activities of other lenders in the field.

The existence of the Industrial Development Bank will, it is believed, be of particular value to small business which has laboured under certain handicaps in obtaining medium and long-term capital. These small industrial establishments are an essential part of the national economy and an important source of employment and production.

The Bank will be a subsidiary corporation of the Bank of Canada, and will have as its directors, the directors of the Bank of Canada and the Assistant Deputy Governor. The Governor of the Bank will be President of the new organization.

The Bank will be empowered to borrow up to three times the amount of its paid-up capital stock and reserve fund, by the issue of bonds and debentures: this, it is expected, will provide total resources of \$100,000,000. The bonds and debentures issued by the Bank will not be guaranteed by the Federal Government, but will be made an eligible investment for the Bank of Canada.

### Section 3.—Currency

#### Subsection 1.—Canadian Coinage\*

The present standard of Canada is gold of 900 millesimal fineness (23.22 grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. The British sovereign and half-sovereign, and United States eagle, half-eagle and double-eagle are legal tender. Subsidiary coin consists of 50-, 25- and 10-cent silver pieces,† 800 fine (reduced from 925 fine in 1920). Such subsidiary silver coin is legal tender to the amount of ten dollars. The 5-cent piece is legal tender up to five dollars and the 1-cent bronze coin up to twenty-five cents. There is no provision for the redemption of subsidiary coin. A table at p. 807 of the 1941 Year Book gives particulars of weight, fineness, etc., of current coins.

\* Revised under the direction of H. E. Ewart, M.E.I.C., Master, Royal Canadian Mint, Ottawa.

† The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The former was not coined until 1935, when a limited issue was made as a jubilee coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5-cent piece. In 1942 a new 5-cent piece was coined from 'tombac', a copper-zinc alloy, in order to conserve nickel for war purposes.

## 2.—Circulation of Canadian Coin as at Dec. 31, 1926-43

NOTE.—The figures are of net issues of coin. Figures for the years 1901-25 appear at p. 858 of the 1927-28 Year Book. Per capita figures are based on estimates of population as given at p. 141.

Year	Silver	Nickel	'Tombac'	Bronze	Total	Per Capita
	\$	\$	\$	\$	\$	\$
1926.....	27,433,463	564,865	—	2,043,833	30,042,161	3.18

1943.....	51,009,046	4,826,033	1,407,424	6,300,627	63,543,130	5.38

**The Royal Canadian Mint.**—The Ottawa Mint was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By 21-22 Geo. V, c. 48, it was constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Sect. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint in London or from The Mint, Birmingham, Ltd., and in its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation, of British sovereigns and of small coins struck under contract for Newfoundland and Jamaica. Previous to 1914 small quantities of gold bullion were refined, but during the First World War the Mint came to the assistance of the British Government by establishing a refinery in which nearly twenty million ounces of South African gold were treated on account of the Bank of England. The subsequent great development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Gold coins have not been struck since 1919, most of the fine gold produced from the rough shipments from the mines being delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 fine oz. each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold in New York or disposed of to local manufacturing firms.

An account of the organization and operational methods of the Royal Canadian Mint is given at pp. 888-892 of the 1940 Year Book.

### 3.—Annual Receipts of Gold Bullion at the Royal Canadian Mint, and Bullion and Coinage Issued, 1926-43

NOTE.—Although not presented in exactly the same form, figures for 1901-16 are given at pp. 857-858 of the 1927-28 Year Book and for 1917-25 at p. 894 of the 1936 Year Book.

Year	Gold Received	Gold Bullion Issued	Silver Coin Issued	Nickel Coin Issued	'Tombac' Coin Issued	Bronze Coin Issued
	fine oz.	fine oz.	\$	\$	\$	\$

### Subsection 2.—Dominion and Bank of Canada Notes

**Dominion Notes.**—In the historical outline referred to at the beginning of this Chapter it is stated that Dominion notes became established in 1868. The legislation by which the issue was expanded with the growth of the country is given in an explanatory footnote at p. 952 of the 1934-35 Year Book. Previous editions of the Year Book, down to that of 1940, carry a summary of the main features of the former Dominion note issue.

**Bank of Canada Notes.**—The Bank of Canada, when it commenced operations, assumed the liability for Dominion notes outstanding, which were replaced in public circulation, and partly replaced as cash reserves, by its own legal-tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50, \$100 and \$1,000. Deposits of chartered banks at the Bank of Canada completed the replacement of Dominion notes as cash reserves.

The chartered banks are required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes are thus replacing chartered bank notes as the issue of the latter is reduced.

There has been little change in the circulation of denominations of notes under \$5. In the denominations from \$5 to \$1,000, where Bank of Canada notes have partially replaced chartered bank notes or Dominion notes, there has been a large increase. On the other hand, the special Dominion notes in denominations from \$1,000 to \$50,000 which were used almost exclusively for inter-bank transactions or bank reserves, are no longer in use.

#### 4.—Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929, 1932 and 1941-43

NOTE.—Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

#### Subsection 3.—Chartered Bank Notes

The developments by which bank notes became the chief circulating medium in Canada in the period preceding the establishment of the Bank of Canada are described in the historical outline referred to at the beginning of this Chapter. The main steps of this development that remained as permanent features of the system are outlined at pp. 809-810 of the 1941 Year Book.

The provisions regarding bank notes were materially changed with the establishment of the Bank of Canada under the Bank Act (c. 24) of 1934. The authority for both seasonal expansion and additional issue secured by deposit in the Central Gold Reserves was then terminated. Provision was made for a gradual reduction in bank-note circulation over a period of years as explained at p. 879. As a result of these changes, current data on bank-note circulation are not comparable with those of earlier years. However, statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion notes and Bank of Canada notes, exclusive of those held by the banks as reserves. Statistics on this basis are shown in Table 5.

**5.—Annual Averages of Note Circulation in the Hands of the Public, 1926-43**

NOTE.—Figures of circulating media in the hands of the general public for the years 1900-35 appear at p. 900 of the 1936 Year Book.

Year	Averages of Month-End Figures			Averages of Daily Figures of Total

<sup>1</sup> Gross note circulation of chartered banks less notes of other chartered banks. <sup>2</sup> Total issue less notes held by chartered banks and notes deposited in the Central Gold Reserves up to March, 1935.  
<sup>3</sup> Figures, to nearest million, supplied by the Bank of Canada. <sup>4</sup> Figures based on estimates of population as given at p. 141. <sup>5</sup> Revised since the publication of the 1942 Year Book.

**Section 4.—Monetary Reserves**

**Subsection 1.—Bank of Canada Reserves**

The composition of Canadian Gold Reserves held by the Government is presented in the 1936 edition of the Year Book, at p. 895, for the years 1905 to 1934. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are valued at the prevailing current market price of gold. The effect of the revaluation as from the above date is shown in the chart at p. 886 of the 1937 Year Book. The new data are now to be found under the item "Reserves" in the "Assets" section of Table 1, p. 876. As explained in footnote 2 of that table, under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Foreign Exchange Control Board and the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was temporarily suspended.

**Subsection 2.—Chartered Bank Canadian Cash Reserves**

**Before the Establishment of the Bank of Canada.**—Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes; partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks themselves; and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

**Since the Establishment of the Bank of Canada.**—When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada. It was provided that henceforth the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank except as affected by the Exchange Fund Order, 1940, as explained under Bank of Canada reserves in Sub-section 1.

#### 6.—Annual Averages of Cash Reserves of the Chartered Banks in Canada, 1926-43

NOTE.—Figures, to nearest million, supplied by the Bank of Canada. Cash reserves prior to Mar. 11, 1935, include gold and coin and Dominion notes held by the banks in Canada and deposits in the Central Gold Reserves not earmarked; since that date, they include notes and deposits with the Bank of Canada.

## Section 5.—Commercial Banking

### Subsection 1.—Historical

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch, which is given at pp. 901-905 of the 1938 Year Book. The 1941 Year Book, at pp. 812-813, treats of the note issues of the chartered banks to the outbreak of the Second World War and of bank absorptions since Confederation. A list of the banks at Confederation appears at p. 897 of the 1940 Year Book. A table at pp. 894-895 of the 1937 Year Book shows the insolvencies since Confederation; there has been none since 1923.

**The 1944 Revision of the Bank Act.**—According to statute the charters of the commercial banks in Canada are renewable every ten years and, at the same time, the Bank Act itself is revised. On May 1, 1944,\* the Minister of Finance introduced into the House of Commons a Bill by which the latest proposed revisions of the Bank Act were placed before Parliament for discussion. The Minister explained the various features of the Bill on May 2 when the legislation was introduced for Second Reading.† Because of the importance of the proposed changes the most outstanding of these are summarized below, although they have not yet passed into the Statutes and changes may be made by Parliament before the final legislation is passed.

\* See Hansard for May 1, 1944, pp. 2553-2554.

† See Hansard for May 2, 1944, pp. 2609-2630.

(1) *Note Issue*.—The changes under this heading: (a) preclude any new bank that may be incorporated from having any right to issue bank notes; (b) limit the right of existing banks to issue or re-issue bank notes in Canada to the period ending Jan. 1, 1945, and in that period only up to the present limit of 35 p.c. of their unimpaired paid-up capital; (c) require existing banks to reduce their note issue by Jan. 1, 1945, to 25 p.c. of their unimpaired paid-up capital, thereafter until Jan. 1, 1950, to take away from them the right to issue or re-issue their notes and to require them to retire all their notes outstanding in Canada by Jan. 1, 1950; (d) to allow existing banks to continue to issue notes for circulation outside of Canada but only up to a maximum of 10 p.c. of their unimpaired paid-up capital.

(2) *Inactive Accounts*.—Every inactive account, wherein no transaction has taken place and no claim has been made for a period of ten years, shall be turned over (together with interest, if any, to the date of payment) by the chartered banks to the Bank of Canada and, thereupon, the liability of the chartered banks in respect to the debt ceases and is taken over by the Bank of Canada. If payment be later demanded by a person who was originally a creditor of a chartered bank or by his legal representatives, the Bank of Canada shall pay the amount paid to it together with such interest, if any, as is due. After completion of a twenty-year period, the Bank of Canada will continue to be liable to pay the amount and the accumulated interest but interest will not continue to accumulate after that time.

(3) *Interest Rates Chargeable by the Chartered Banks*.—Very important changes are proposed in respect to Section 91 of the Bank Act. In keeping with the decline in interest rates which has occurred in recent years, it is proposed to reduce the maximum rate from 7 p.c. to 6 p.c. per annum. Another proposed amendment to this same section of the Bank Act introduces a radical change in Canadian banking practice by making possible participation by the chartered banks in the small-loan business, where such loans, evidenced by promissory notes not supported by collateral, do not exceed \$500. Such loans are repayable in substantial equal monthly installments and the bank may charge a rate that does not exceed a rate resulting from a discount of 5 p.c. on a one-year loan repayable in equal monthly installments: this is equivalent to an effective interest rate of  $9\frac{3}{4}$  p.c. per annum—considerably less than half the rate that small-loan companies and personal money lenders are at present permitted to charge on similar loans. The Minister pointed out that, in his desire to keep maximum charges low, he may easily have gone too far and would like the Banking and Commerce Committee to hear evidence from the banks as to how far it was possible to do this type of business under the terms suggested in the Bill.

(4) *The Simplification of Borrowing Procedure for Certain Types of Business other than Farmers and Fishermen*.—In certain types of business borrowers find it necessary frequently to turn over goods upon which security is advanced. In the past fresh security has had to be given every time new materials were acquired. The proposed amendment would greatly reduce the inconvenience to such borrowers by recognizing security given at the outset as security for all loans made or to be made under a revolving line of credit covering raw materials as they are acquired and manufactured.

(5) *The Planning of Facilities for Loans to Farmers and Fishermen.*—Certain amendments are proposed that will make it possible for the chartered banks to supply 'intermediate' credit needed by farmers and fishermen to increase the efficiency of their operations or to add to the amenities of life on the farm. Under a proposed new Farm Improvement Loans Act the Government will give guarantees up to 10 p.c. of the aggregate of eligible loans, to banks in respect of certain loans to farmers, and the maximum rate of interest to be charged by the banks will be 5 p.c. simple interest per annum. Such loans may be made to farmers who own their own farms and also to purchasers under agreements for sale and to tenant farmers. They may be made for the purchase of implements upon the security of such implements, for the purchase or installation of equipment or of farm electric systems or for permanent improvements generally, upon the security of such equipment or improvements.

At the time of going to press with this section of the Year Book, the revision of the Bank Act as submitted to the House by the Minister of Finance on May 2, 1944, had been referred to the Banking and Commerce Committee. The final legislation will be reviewed in the 1945 edition of the Year Book.

**The Canadian Banks and the Dominion's War Effort.**—Because for the most part they operate on a nationwide scale, the chartered banks of Canada have been from the first in a position to exercise an extraordinarily potent influence in the furtherance of Canada's war effort. The experience, resources and organization of these banks, with their thousands of branches throughout the country, have been placed unreservedly at the disposal of the Dominion Government, and have been of great assistance in carrying out much of the administrative work connected with the control of the numerous and complicated measures necessary for the maintenance of financial equilibrium. The services of banking experts have assisted in operations connected with financing war operations of ever-increasing scope.

To-day, the volume of business handled by the banks is on a level phenomenally higher than at any time in their history, yet their staffs of experienced men are much smaller than in peace-time, owing to the fact that nearly 7,000 of their younger men are serving in the Armed Forces. These men have had to be replaced by women, quickly and intensively trained for the work.

The most onerous war work devolving on the chartered banks has been the administration of the regulations of foreign exchange control. These regulations, which are numerous and complicated, entail much extra work by the staffs of the leading offices, involving as they do explanations to customers, advice as to procedure, the filling out of forms, and full responsibility for all the innumerable international transactions involved.

Other war work includes handling details connected with the offering and sale of Victory Bonds; selling war savings certificates and war savings stamps; ration coupon banking on the lines undertaken by the banks in the United States; establishment of branches at military camps; cashing of innumerable cheques for Government employees and members of the Armed Forces and their dependants; the cashing of coupons for the hundreds of thousands of holders of Victory Bonds; the administering of much detail of Canada's cheque stamp law; the collecting and clearing of millions of income tax certificates relative to coupons, cheques and other items cashed and received for deposit.

All this extra work has become part of the routine of banking in Canada.

## Subsection 2.—Combined Statistics of Chartered Banks

In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in Table 7 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, "other assets" being included in the total. Of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The following chart showing the division of ownership of assets is of interest in this connection. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Dominion and Provincial Government and municipal securities were relatively insignificant prior to the First World War.

## 7.—Development of Chartered Banking Business in Canada, 1916-43

NOTE.—These statistics are yearly averages computed from the twelve monthly returns. Dashes indicate that no information is available under the corresponding column heads for years so indicated. Figures for the years 1867 to 1880 will be found at pp. 918-919 of the 1938 Year Book, and for the years 1881 to 1915 at pp. 815-816 of the 1941 edition.

<sup>1</sup> Revised since the publication of the 1942 Year Book.

<sup>2</sup> That portion of the Central Gold Reserves earmarked for *additional* bank-note issue. After the establishment of the Bank of Canada in 1935, the note issues of the chartered banks were severely restricted and gradually disappeared and this item is not in evidence after 1934.

<sup>3</sup> System changed owing to establishment of the Bank of Canada.

<sup>4</sup> Included in cash reserves.

<sup>5</sup> See headnote.

## 9.—Liabilities of Chartered Banks, 1929, 1932 and 1941-43

PUBLIC DEMAND AND NOTICE DEPOSITS  
OF  
CHARTERED BANKS IN CANADA  
1936-1943

CURRENT LOANS OF CHARTERED BANKS  
TO  
THE PUBLIC IN CANADA  
1936-1943

**Cheque Payments.**—In advanced industrial societies money is only “the small change of commerce”. The great bulk of monetary transfers, particularly in the case of the larger transactions, is made through the banks. It has been estimated that about 6 p.c. of the business transactions of the continent of North America are financed by the use of money and the remaining 94 p.c. by the use of cheques. Accordingly, if the aggregate amount of the cheques paid through the banks and charged to accounts is known, there is an almost complete record of the volume of business transacted, and thus of the business activity of the country.

**Bank Debits.**—As the number of commercial banks has in recent years been steadily diminishing through amalgamations (see pp. 812-813 of the 1941 Year Book), there being only 10 in December, 1940,\* as compared with 18 in 1923, inter-bank transactions are a steadily decreasing proportion of total business transacted, and bank clearings have ceased to be a satisfactory measure of general business. The Canadian Bankers' Association have secured from January, 1924, the monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearing-house centres of Canada; monthly and annual figures of cheques charged to accounts (bank debits) have been published since that time by the Dominion Bureau of Statistics. Further, in order that an estimate might be made of the proportion of banking transactions outside the clearing-house cities to the total, the Canadian Bankers' Association secured for the month of January, 1935, the grand total of all cheques charged to accounts at all branch banks throughout the Dominion. The results were published in the Bureau's “Monthly Review of Bank Debits” for February, 1935, and showed that in January, 1935, the aggregate of transactions outside the clearing-house cities was  $12\frac{1}{2}$  p.c. of the grand total in the clearing-house cities. In the five economic areas the percentages of debits in the clearing-house centres to debits at points outside such areas were as follows: Maritime Provinces, 49.0 to 51.0; Quebec, 93.5 to 6.5; Ontario, 88.1 to 11.9; Prairie Provinces 92.2 to 7.8; British Columbia, 85.7 to 14.3. The Maritime Provinces was the only area where the debits in clearing-house cities were not over 85 p.c. of the total debits.

The sum of the cheques cashed in clearing centres throughout Canada during 1942 showed a continuance of the upward trend. The total of \$45,526,000,000 represented a gain of 16 p.c. over the \$39,243,000,000 cashed during 1941 and was almost 44 p.c. greater than the amount for 1939. The increase in debits exceeded that shown by several other barometers of economic conditions.

The total volume of bank debits rose in all five economic areas. Ontario recorded the largest increase of 21.5 p.c. followed by the Prairie Provinces with 19.8 p.c., and British Columbia, Quebec and the Maritime Provinces with increases of 17.1 p.c., 15.2 p.c. and 14.4 p.c., respectively.

\* Barclays Bank, established in 1929, was the latest addition to the commercial chartered banks in Canada; the number has remained at 10 since 1931.

### 13.—Bank Debits at the Clearing-House Centres of Canada, by Individual Centres, 1939-43

<sup>1</sup> Eight-month figure only. First reported May, 1941.

**Equation of Exchange.**—The actual amount of currency held by the Canadian public constitutes only about 15 p.c. of the total money supply available. The remainder is made up of the deposits held by the chartered banks.

The supply of circulating media, consisting of bank notes and coin in the hands of the public, showed an increase of about 34 p.c. during 1942, the third full year of war. The 1942 total of \$588,000,000 rose about \$148,000,000 over the preceding year. The sum of deposits held by the banks showed a greater absolute increase than in any other year in the period from 1921 to the present, rising to \$3,333,000,000 as compared with \$3,026,000,000 in 1941.

By far the greater part of this advance was recorded by demand deposits, which rose from \$1,088,000,000 in 1941 to \$1,342,000,000. This increase was far greater than any previously listed, and demand deposits were 176 p.c. greater than in 1932, the low point of the last important depression. Notice deposits had receded somewhat during the second war year; this trend was reversed in 1942, the total rising from \$1,616,000,000 in 1941 to \$1,645,000,000. Deposits held by the Dominion Government averaged \$13,000,000 greater than in 1941, and were \$267,000,000 in 1942 as compared with \$49,000,000 in 1938, the latest full year of peace.

Significance is attached to the relation between the cash and cheque payments and the money supply. The latter, as stated above, is made up of the sum of the deposits held by the chartered banks and the total amount of notes and coin in the hands of the public. The figure for "cash and cheque payments" denotes the total volume of all financial transactions in Canada, either by cash or cheque, during a given year.

By dividing the total volume of cash and cheque transactions for a certain year by the money supply in that year, it can be determined how many times the supply changed hands or was 'turned over'. This number is spoken of as the "velocity of money" during the period in question.

During 1942, cash and cheque payments rose substantially over the total for 1941, standing at \$61,764,500,000 as compared with \$51,620,000,000 in the preceding year. This total was the highest recorded for cash and cheque payments. The total money supply advanced from \$3,467,000,000 in 1941 to \$3,922,000,000 in 1942—a historical record. The percentage gain over 1941, however, was larger for cash and cheque transactions than for money supply.

The velocity of money in 1942 was, therefore, higher than in the previous year, rising from 14.89 to 15.75, but the turnover was still not as great as in most other years since 1921.

The volume of commodities and services multiplied by the prices at which they are purchased should conform to the trend of cheque and cash payments. The index of national income shown at p. 797 is regarded as the best measure of the former.

The emphasis in recent years consequently has been placed on credit instruments rather than upon purely monetary factors. The development of deposit currency and of central banking permits a high degree of variation between the volume of the means of payment and the supply of cash. Fluctuations in total money income are more fundamental than the variation in the amount of deposits and circulating media or in the velocity of turnover. The means of payment are normally adjusted to the ebb and flow of economic conditions.

### Subsection 3.—Statistics of Individual Chartered Banks

**Assets and Liabilities.**—The statistics in column 2 of Table 14 represent, for the years 1935 (when the Bank of Canada was established) and 1939 to 1943, the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. For 1929 (before the establishment of the Bank of Canada) they represent the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserves not required against their note issues.

# 14.—Principal and Total Assets of Individual Chartered Banks, 1929, 1935, 1939 and 1941-43

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year.

Bank	Year	Cash Reserve Against Canadian Deposits <sup>1</sup>	Total Securities	Total Loans	Total Assets
		\$	\$	\$	\$
Bank of Montreal.....	1929	86,400,000	130,941,236	581,302,970	913,759,043
	1935	65,400,000	349,672,401	266,878,000	766,144,449
	1939	78,300,000	468,069,688	260,693,738	925,992,713
	1941	91,227,000	512,633,996	317,004,071	1,044,850,338
	1942	92,745,000	610,311,641	298,977,755	1,118,931,591
	1943	113,365,000	749,289,581	298,613,165	1,294,063,425
Bank of Nova Scotia.....	1929	18,400,000	44,107,378	172,881,551	275,257,022
	1935	23,400,000	103,828,021	110,217,442	277,368,870
	1939	22,700,000	128,464,101	117,409,315	322,729,150
	1941	25,007,000	138,182,365	125,435,299	356,254,715
	1942	28,180,000	151,274,791	129,290,773	390,543,803

	1943	412,835,000	2,714,287,457	1,334,080,023	5,148,458,722

<sup>1</sup> Excluding minor amounts of gold carried in such reserves. See also text immediately preceding this table.

<sup>2</sup> Absorbed by the Imperial Bank of Canada, May 1, 1931.

<sup>3</sup> Four-month averages; bank commenced business in September, 1929. The grand totals for 1929 are, however, twelve-month averages for all banks.

### 15.—Principal and Total Liabilities of Individual Chartered Banks, 1929, 1935, 1939 and 1941-43

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year.

Bank	Year	Notes in Circulation	Deposit Liabilities			Liabilities to Shareholders	Total Liabilities
			Government	Public	Inter-Bank		
		\$	\$	\$	\$	\$	\$

<sup>1</sup> Absorbed by the Imperial Bank of Canada, May 1, 1931. <sup>2</sup> Four-month averages; bank commenced business in September, 1929. The grand totals for 1929 are, however, twelve-month averages for all banks.

**Earnings of Chartered Banks.**—The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable accuracy the fluctuations of general business.

### 16.—Net Profits of Chartered Banks and Rates of Dividend Paid, for Their Business Years Ended 1938-43

NOTE.—These figures are not strictly comparable owing to variations from year to year in the practices of individual banks and between banks. With the exception of the Banque Provinciale du Canada, the profits are shown after deducting Dominion and Provincial Government taxes.

<sup>1</sup> Not reported.

<sup>2</sup> Reduced in last quarter.

**Branches of Chartered Banks.**—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same (36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 7, which shows the development of the banking business since 1916, and in Table 17, which compares the number of branch banks existing in Canada at different periods, and indicates a growth from 123 at Confederation to 4,676, inclusive of sub-agencies, at Dec. 31, 1920. As at Dec. 31, 1943, the total stood at 3,084 (exclusive of 139 branches and 3 sub-agencies in other countries) the reduction having resulted from the closing of some unprofitable branches, and also from contractions brought about by war-time conditions.

## Section 6.—Government and Other Savings Banks

In a comparatively new country where capital is relatively scarce, it is natural that the banks that finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus, in Canada the great bulk of the current savings of the people has been found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given in Table 7 of this chapter, the 1943 average being \$1,864,177,700. This is not so true to-day, when the Government is absorbing a large proportion of current savings for the financing of the War. Further, the cur-

rent savings of the Canadian people are going very largely into the purchase of life insurance, the total premiums paid in the single year 1943 aggregating \$228,694,698. Nevertheless, current savings as shown by deposits in the banks are large, although those in the special savings banks are comparatively small, but are none the less significant.

There are three distinct types of savings bank in Canada at the present time, in addition to the savings departments of the chartered banks, and of trust and loan companies. First, there is the Post Office Savings Bank, in which the deposits are a direct obligation of the Dominion Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and the Caisse d'Economie de Notre-Dame de Québec, established under Dominion legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift are the co-operative credit unions, which are dealt with under the heading of "Co-operation" at pp. 536-544.

**Dominion Government Savings Banks.**—Prior to 1929 there were two classes of Dominion Government savings banks in Canada, the Post Office Savings Bank under the Post Office Department, and the Dominion Government Savings Bank attached to the Department of Finance. The former was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government Savings Bank proper, under the authority of the Finance Department, were established in the leading cities of Canada under the management of the Assistant Receivers General and at certain designated centres in Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. From deposits of \$1,483,219 at June 30, 1868, increases were registered until 1887, \$21,334,525 being shown at the credit of depositors at June 30 of that year. Commencing about 50 years ago, the individual banks were gradually amalgamated with the Post Office Savings Bank, and at Mar. 31, 1928, bank deposits had fallen to \$7,640,566. The remaining banks finally were amalgamated with those of the Post Office in March, 1929.

## 20.—Deposits with Post Office and Dominion Government Savings Banks, Fiscal Years 1918-43

NOTE.—Figures for Provincial Government savings banks are not included. Figures for 1868-1917 will be found at pp. 833-834 of the 1926 Year Book. The Dominion Government Savings Bank was amalgamated with the Post Office Savings Bank in 1929.

**Provincial Government Savings Banks.**—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta, while a similar institution was in operation in Manitoba from 1924 to 1932, when the depositors' accounts were taken over by the chartered banks.

*Ontario.*—In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. Interest at the rate of 1 and 1½ p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits on Mar. 31, 1944, were \$38,400,000, and the number of depositors at that date was approximately 104,000. Twenty-two branches are in operation throughout the Province.

*Alberta.*—In Alberta the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at 2 p.c., or term certificates for one, two or three years, in denominations of \$25 and upwards, bearing interest at 2 p.c. for one year and 2½ p.c. for two or three years. The total amount in savings certificates on Dec. 31, 1943, was \$3,621,170, made up of \$2,424,836 in demand certificates and \$1,196,334 in term certificates.

**Penny Banks.**—Provision is made by the Penny Bank Act (R.S.C., 1927, c. 13) for the institution of banks designed to encourage small savings by school children, although their facilities are not confined to children. Such banks are not deemed to be banks within the meaning of the Bank Act, but are savings banks within the meaning of the Winding-Up Act, and their powers are strictly limited. The only bank operating under this statute is the Penny Bank of Ontario.

**22.—Assets and Liabilities of the Penny Bank of Ontario, Years Ended June 30, 1940-43**

<sup>1</sup> Totals include minor unspecified items. 1932.

<sup>2</sup> Includes \$33,572 investment reserve.

<sup>2</sup> Includes \$15,000 due under agreement dated Apr. 26,

As at June 30, 1942, the Penny Bank of Ontario served a school population of 198,000 children in 488 schools. The Public Schools Act (R.S.O., c. 357, Sect. 89-Y) and the High Schools Act (c. 360, Sect. 25-B) state that the Board of Trustees may provide books, stationery and other materials necessary in connection with the establishment and maintenance of a penny savings bank or any system introduced for the encouragement of thrift and the habit of saving. The great reduction in business in 1943 is due to the decision not to accept any further deposits after February, in order that the school children might concentrate upon the purchase of War Savings Stamps and Certificates.

**Other Savings Banks.**—The Montreal City and District Savings Bank founded in 1846 and now operating under a charter of 1871, had on Mar. 31, 1943, a paid-up capital and reserve of \$5,300,000, savings deposits of \$70,925,371, and total liabilities of \$73,661,299. Total assets amounted to \$79,221,942, including over \$58,000,000 of Dominion, provincial and municipal securities. The Caisse d'Economie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855, and given a Dominion charter by 34 Vict., c. 7, had on Mar. 31, 1943, savings deposits of \$13,098,401, a paid-up capital and reserve of \$3,000,000, and total assets of \$16,660,373.

**23.—Deposits in the Montreal City and District Bank and the Caisse d'Economie de Notre-Dame de Québec, Representative Fiscal Years 1868-1900 and 1905-44**

NOTE.—Figures for intermediate years will be found at p. 833 of the 1926 Year Book.

## Section 7.—Foreign Exchange

### Subsection 1.—Exchange Rates

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the

import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the First World War. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of the First World War, both the pound sterling and the Canadian dollar were removed from the gold standard, and fell to a discount in New York. However, this discount was 'pegged' or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged' about November, 1920, the British pound went as low as \$3.18 and the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange returned practically to par, and the United Kingdom resumed gold payments in April, 1925, and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals.

The 1942 Year Book, at pp. 829-830, deals with the pre-war position of Canadian exchange from September, 1931, to the outbreak of war and also with the war-time movement of Canadian exchange. In view of the practically static position of exchange under present conditions, this information has not been repeated here.

### **Subsection 2.—War-Time Control of Foreign Exchange**

An article that outlines the reasons for control, the organization and administration of the Foreign Exchange Control Board and the establishment of the Exchange Fund through which purchases and sales of foreign funds are made, appears at pp. 833-835 of the 1941 Year Book. A further article, at pp. 830-833 of the 1942 Year Book, covers modifications in procedure down to July, 1942, and, as only minor changes have been made since that time, it is not considered necessary to repeat the information here. The latest regulations may be ascertained through any branch of the chartered banks, which have been constituted authorized dealers by the Board.

## **PART II.—MISCELLANEOUS COMMERCIAL FINANCE**

### **Section 1.—Loan and Trust Companies\***

The Canada Year Book, 1934-35, presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be col-

\* Revised under the direction of G. D. Finlayson, Superintendent of Insurance, Department of Insurance.

lected. However, certain summary statistics of provincial companies have been supplied for 1941-42 by courtesy of those companies and are included in Table 1 in order to complete the picture for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with Dominion registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning with 1925, the statistics of loan companies and trust companies incorporated by the Province of Nova Scotia, and brought by the laws of that Province under the examination of the Dominion Department of Insurance, have been included in Table 3 as well as those for trust companies in New Brunswick since 1934 and in Manitoba since 1938. In 1920 the Dominion Department of Insurance took over the administration of the legislation concerning Dominion loan and trust companies—the Department of Finance had previously exercised supervision of their activities.

As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies increased from \$188,637,298 in 1922 to \$213,649,794 in 1931, or by 13.3 p.c., but declined from 1931 to 1942 by 13.5 p.c. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$226,254,215 in 1942 or by 46.7 p.c. In the former year, the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in the latter year to \$2,735,610,413. (Table 1.)

**Functions of Loan Companies.**—The principal function of loan companies is the lending of funds on first mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. Of the loan companies operating under provincial charters, the majority conduct loan, savings and mortgage business, generally in the more prosperous farming communities.

**Functions of Trust Companies.**—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits, but the lending of actual trust funds is restricted by law.

**Statistics of Loan and Trust Companies.**—The figures of Table 1 are of particular interest in the case of trust companies. On account of the nature of their functions, they are mainly provincial institutions, their chief duties being intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

# 2.—Assets and Liabilities of Loan Companies Chartered by the Dominion Government, as at Dec. 31, 1925-42

NOTE.—For the years 1914-24, see p. 913 of the 1937 Year Book. The figures since 1924 appearing here include loan companies chartered by the Government of Nova Scotia, but inspected by the Dominion Department of Insurance. Figures given in this table do not include small loans companies (see Sect. 2 of this chapter, pp. 907-908).

## Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders

There has been incorporated in recent years, by the Parliament of Canada, a number of companies that make small loans, usually not exceeding \$500 each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While these companies may, under their charter powers, make loans on the security of real estate, actually they have made but very few of such loans.

On Jan. 1, 1940, the Small Loans Act, 1939 (3 Geo. VI, c. 23), passed by the Parliament of Canada, came into force, by which the above-mentioned small loans companies and money-lenders licensed thereunder making personal loans of \$500 or less, are limited to a rate of cost of loan of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.

The figures relating to the three small loans companies are shown in Table 5.

#### 5.—Assets and Liabilities of Small Loans Companies Chartered by the Dominion Government, as at Dec. 31, 1933-42

NOTE.—Figures for 1928-32 will be found at p. 838 of the 1942 Year Book.

<sup>1</sup> First year Small Loans Act in operation.

<sup>2</sup> Not including balances other than small loans.

<sup>3</sup> Includes \$200,000 bonds, debentures and stock.

<sup>4</sup> Includes taxes.

<sup>5</sup> Small loans on earned basis in 1940.

<sup>6</sup> Including business other than small loans.

*Licensed Money-Lenders.*—In addition to the 3 small loans companies whose business is outlined above, 63 licensed money-lenders furnished annual statements of their business, showing total assets of \$10,508,206, of which balances of small loans amounted to \$4,696,545, other balances to \$3,541,699, bonds, debentures and stocks to \$521,123, real estate to \$529,189, and cash to \$341,021. Liabilities amounted to \$10,508,206, of which borrowed money accounted for \$5,101,999 and paid share and partnership capital for \$3,995,477. Loans made in 1942 numbered 57,272, totalling \$8,798,006 and averaging \$154, an increase of 13.5 p.c. in number and of 9.6 p.c. in the gross amount; at the end of the year there were 44,371 loans outstanding with totals and averages of \$4,683,893 and \$106, respectively. About 42 p.c. of the number of loans made in 1942 were between \$100 and \$200. Further details of this type of business are given in the 1941 report "Small Loans Companies and Money-Lenders Licensed under The Small Loans Act, 1939", published by the Dominion Department of Insurance.

### Section 3.—Sales of Canadian Bonds\*

The total sales of Canadian bonds naturally reached a very high mark toward the close of the War of 1914-18 owing to the Dominion Government financing required to cover war expenditures. The 1919 total of over \$900,000,000 was not exceeded until 1931 when a large amount of war bonds was refunded at lower rates of interest. In 1942 and 1943, third and fourth complete years of the present war, total sales in each year were successively greater than in any previous year. The 1943 total was approximately 35 p.c. higher than that of 1942. Owing to the concentration on Dominion Government loans, the proportion of all other types of financing to the total sales was the lowest since 1918. External markets were closed, with the exception of some private refunding which took place in the United States, and the country was faced with the necessity of raising all required funds within the Dominion.

Highlights of the year's bond issues in 1942 came in March with the successful flotation of the Fourth War Loan (Second Victory Loan), which totalled \$996,706,900. Another issue in November, the Fifth War Loan (Third Victory Loan), amounted to \$991,536,500.

\* Revised from information supplied by E. C. Gould, Assistant Editor, the *Monetary Times*.

Highlights of the year's bond issues in 1943 came with the flotation of two issues, one in May, the Sixth War Loan (Fourth Victory Loan), which raised \$1,308,716,650; the other issue came in November, the Seventh War Loan (Fifth Victory Loan), raising \$1,571,311,550.

Dominion Government bond financing since 1907 may be divided into four periods: from 1907 to 1914; the period of the First World War from 1914 to 1918; from 1919 to 1939; and from 1939 to date. In the first period the money was required largely for internal development, public works and railways; in the second, war expenditures required very large borrowings. The third was divided into two phases by the year 1929; up to that year, the annual borrowings of the Dominion tended to decline although the borrowings on account of the Canadian National Railways were considerable. After 1929 the sales of new Dominion Government bond issues rose steadily, comprising borrowings to pay for unemployment relief, refundings at lower rates of interest, and various public works. Since the outbreak of the War in 1939, the Dominion has been forced to borrow on an unprecedented scale in order to meet the tremendous expenditures that have to be borne.

Until 1940, provincial bond issues were on a much larger scale since the War of 1914-18 than formerly, probably because of the development of provincially owned public utilities and of improved highways. Owing to additional demands on Canada's capital markets, however, the Provincial Governments expressed the intention in 1941 of strictly limiting bond financing for the duration of the War. Consequently, the aggregate of provincial direct and guaranteed bond financing in that year was only \$69,736,000, \$96,860,000 in 1942, and \$97,632,000 in 1943, as compared with \$156,820,000 in 1940 and \$154,059,900 in 1939. The 1941 figure was the lowest since 1919. With the total of refunding also smaller in 1941, it was only natural that the volume of provincial flotations should decrease.

Sales of the bonds of Canadian municipalities were greater in 1913, towards the end of the 'land boom', than they have been in any other year, standing at \$110,600,936. Sales in 1930 almost reached the record when they totalled \$109,648,063. In spite of the increased urbanization of the population, however, there has been a marked decrease in the annual sales of municipal bonds, the amounts being \$23,563,905 in 1942 and \$14,228,986 in 1943.

During 1942 and 1943, the new-issue municipal market was characterized by very low volume. Rising employment throughout the Dominion and greatly increased industrial activity has had marked influence on municipal finances generally. Unemployment relief expenditures were down sharply and tax revenues were increasing. As a result, the municipalities found themselves in a more comfortable financial position and new debentures during the past two years were practically non-existent.

Sales of corporation bonds, which from 1926 to 1930 had averaged over \$257,000,000 per year, dropped to \$10,550,000 in 1932 and to \$4,385,000 in 1933, this being due to the unfavourable industrial outlook. Since then the amount of new money borrowed by corporations has been relatively small (except for the two years 1936 and 1939) and the trend has been toward the refunding and retirement of bonded debt. The War did not create any new volume of corporate borrowings since the costs of plant expansion for war production were borne mainly by the Dominion. Railway bonds also showed a precipitate decline to \$12,500,000 in 1932 and fell to \$1,000,000 in 1933. In 1940, 1941 and 1942 there was no direct financing by the railways for the first time on record, owing to a change in methods of financing. However, in April, 1943, the first railway issue since 1939 was floated

by the Canadian Pacific Railway, in the form of trust certificates amounting to \$18,000,000, to be sold privately in the United States. Since 1936, through a change in accounting procedure, much of the borrowing for the Canadian National Railways has been done directly by the Dominion, while, since the War, the Dominion has advanced money to both major systems for the purchase of equipment.

### 6.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1926-43

(From the *Monetary Times Annual*)

NOTE.—Figures for 1904-25, inclusive, are given at p. 921 of the 1933 Year Book.

<sup>1</sup> Includes treasury bill financing from 1934.

<sup>2</sup> Not reported for this year.

<sup>3</sup> Includes

\$20,406,300 Parochial and Miscellaneous, which are not mentioned in the table.

<sup>4</sup> Includes \$4,000,000

distributed elsewhere.

<sup>5</sup> Includes \$1,364,000 Parochial and Miscellaneous in "Sold in Canada"

bond issues.

## Section 4.—Operating Profits of Corporations and Net Income to Stockholders

According to a study made by the Bank of Canada, covering 628 companies, net operating profits rose from \$439,000,000 in 1936 to \$1,013,000,000 in 1942 but the net income to stockholders rose only from \$251,000,000 to \$379,000,000 over the same period due mainly to greatly increased annual deductions for income and excess profits taxes and somewhat larger depreciations and deferred development write-offs:

The companies covered in the compilation include all those with assets of over \$500,000 in 1941 which publish reports or file them with the Companies Branch of the Department of the Secretary of State, together with over one hundred smaller companies whose reports are available on the same basis. It is stated by the Bank of Canada that the net income to stockholders shown in recent years by these companies appears to be about two-thirds of the total for all companies.

Table 7 summarizes the information published by the Bank of Canada in reference to this particular study.

<b>Totals, 628 Companies.....</b>	<b>628</b>	<b>251.4</b>	<b>328.4</b>	<b>268.7</b>	<b>327.8</b>	<b>337.0</b>	<b>379.9</b>	<b>379.4</b>	<b>18.7</b>

<sup>1</sup> The increased rate of excess profits tax (and forced saving) imposed in the 1942 Budget did not go into force until July 1, 1942, and consequently the effect over a full year will not be apparent until 1943 statements are available.

<sup>2</sup> For purposes of comparability any special capital charges made against income account in company reports have been added back, as well as special inventory reserve provision amounting to 2.5, 8.3, 14.6, 5.2 in the years 1939 to 1942, respectively. Depletion charges as specified in footnote (4) have also been added back into net income to stockholders. Thus profits shown in this table are overstated to the extent that no deductions are made for these factors. See also footnote (3).

<sup>3</sup> Includes current bond interest earned but not paid in cash of 2.2, 2.4, 0.6, 1.7, 2.4, 2.3 and 1.9 in the years 1936 to 1942, respectively.

<sup>4</sup> Depletion charges have been added back into "Net Income to Stockholders" for the years 1936 to 1942 respectively, as follows: pulp and paper, 1.3, 1.7, 1.4, 1.0, 2.0, 2.0 and 2.0; other non-ferrous metals, 2.3, 3.6, 3.3, 3.6, 3.9, 4.2 and 4.0; coal and petroleum, 0.5, 0.8, 0.8, 0.3, 0.4, 0.5 and 0.5. Thus, in these cases, and in other cases such as gold mining, where depletion has not been charged in the accounting statements, profits are over-stated.

Subsection 3. Finances of Life Insurance Companies.....	925		

An introductory statement summarizing the salient features of the legislation covering insurance in general and the fields of Dominion and provincial jurisdiction appears at pp. 844-846 of the 1941 Year Book.

The 1942 Year Book, at pp. 842-846, contains a special article on the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932.

## Section 1.—Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These were usually situated at the seaports and operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given at pp. 846-847 of the 1941 Year Book.

In its early days the Dominion did not prove a very lucrative field for fire insurance companies. However, the great advance in building construction and the wide use of improved fire appliances and safety devices have materially reduced the danger of serious conflagrations and have placed the risks assumed by companies in Canada on an equality with those of other countries.

A feature of the fire insurance business, besides the large percentage of British and foreign companies, is the continued increase in the number of companies that are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business. (See p. 540 *re* farmers' mutuals.)

### Subsection 1.—Grand Total of Fire Insurance in Canada

Of the total amount of insurance effected in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces.

\* Revised under the direction of G. D. Finlayson, Superintendent of Insurance.

In the more detailed analyses of fire insurance in Canada dealt with in Table 2, the statistics cover only the operations of companies with Dominion registration, but, as shown in Table 1, such companies account for approximately 93 p.c. of the insurance in force.

### Subsection 2.—Historical and Operational Statistics of Dominion Fire Insurance Companies

**Historical Statistics of Dominion Fire Insurance.**—The report of the Superintendent of Insurance for the year ended Dec. 31, 1942, shows that at that date there were 266 fire insurance companies under Dominion registration; of these 58 were Canadian, 72 were British, and 136 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 78 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

In Table 2 it is shown that the average cost per \$100 of insurance reached a maximum in 1904 and 1905; there has since been a steady decrease with the exception of the years 1921 and 1924 when temporary reversals of the downward swing were in evidence. It is noteworthy that the cost of fire insurance has decreased by 66.9 p.c. since 1905.

**2.—Fire Insurance, by Companies Operating under Dominion Registration, 1900-43**

NOTE.—Figures for the years 1869-1899 are given at p. 973 of the 1939 Year Book, and figures for the intervening years from 1901-1929 at p. 847 of the 1942 edition.

For some years the Department of Insurance has compiled, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and losses by 27 classes of risks agreed upon. This experience for the five latest years available is given in Table 4.

**4.—Percentages of Net Losses Incurred to Net Premiums Written in Canada by All Companies Operating Under Dominion Registration, by Classes of Risks, 1938-42, with Five-Year Averages, 1938-42.**

<sup>1</sup> Revised since the publication of the 1942 Year Book.

**Fire Losses.**—Closely allied to the subject of fire insurance is the subject of fire losses. The Dominion Fire Prevention Association publishes, under the auspices of the Dominion Department of Insurance and with the co-operation of the Association of Canadian Fire Marshals, a report of the loss of life and property caused by fire, from which the information shown in Tables 5 and 6 has been summarized. In addition to the data here shown, the report gives such information as: per capita losses by provinces and by type of building, numbers of fires reported, origins of fires, and criminal investigations arising from fires.

In 1943, the per capita loss was greatest in British Columbia, being \$4.45 as against the Dominion average of \$2.67. The uninsured losses amounted to \$7,069,720, or 22.3 p.c. of the total. Of the 47,594 fires reported in 1943, 1,355 were the subject of official inquiry, 84 prosecutions were instituted and 60 convictions were registered.

## 5.—Fire Losses in Canada, 1926-43

NOTE.—For fire losses from 1923-25, see *Statistical Report of Fire Losses in Canada, 1926*, published by the Dominion Department of Insurance. An estimate of losses from 1898-1922 is published in *Statistical Bulletin No. 27 (1922)*, issued by the same Department.

<sup>1</sup> This amount was given as the total loss, no uninsured losses being reported for Saskatchewan in 1938.

## Subsection 3.—Finances of Fire Insurance Companies

The following tables show for recent years the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada. The majority of fire insurance companies also transact miscellaneous forms of insurance (casualty insurance) dealt with in Section 3 of this chapter. Owing to the fact that

it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted, totals only are given here. Table 25 under Section 3 gives similar information for a few registered Canadian companies whose transactions are confined to forms of insurance other than fire or life.

<sup>13</sup> Includes \$183,101 income war tax, \$259,952 excess profits tax and \$721,576 dividends or savings credited to subscribers.

## Section 2.—Life Insurance

An article descriptive of the growth and development of life insurance in Canada, more particularly with reference to insurance legislation, contributed by A. D. Watson, of the Department of Insurance, Ottawa, is given at pp. 937-944 of the Canada Year Book, 1933.

## Subsection 1.—Grand Total of Life Insurance in Canada

In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 10 summarizes the volume of business transacted by Canadian, British and foreign life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

## Subsection 2.—Historical and Operational Statistics of Dominion Registered Life Insurance Companies

**Historical Statistics of Life Insurance.**—The net life insurance of all companies registered by the Dominion in 1869 was only \$35,680,082, while in 1943 it was \$8,534,135,275.\* The amount per head of the estimated population of Canada has more than doubled since 1919—an evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind the Canadian and the foreign companies.

### 11.—Life Insurance in Force and Effected in Canada by Companies Operating Under Dominion Registration (Fraternal Insurance Excluded),<sup>1</sup> 1900-43

NOTE.—Figures for the years 1869-1899 are given at p. 958 of the 1938 Year Book, and figures for the intervening years from 1901-1929 at p. 855 of the 1942 edition.

Year	Net Amounts in Force				Insurance in Force per Head of Estimated Population <sup>2</sup>	Net Amount of New Insurance Effected during Year

<sup>1</sup> For statistics of fraternal insurance, see pp. 928-930. <sup>2</sup> Based on estimates of population, see p. 141. Due to a revision in these estimates from 1932, per capita figures from that year have been revised since the publication of the 1942 Year Book.

<sup>3</sup> During 1937 approximately \$85,000,000, and during 1938 approximately \$60,000,000 were transferred from insurance in force in Canada. These amounts represent mainly transfers to business out of Canada of certain reinsurances previously classed as Canadian business. They also include transfers to annuities of contracts providing for combined insurance and annuity benefits or options.

<sup>4</sup> Subject to revision.

Life insurance business was transacted in Canada during 1942 by 41 active companies registered by the Dominion, including 28 Canadian, 3 British and 10 foreign companies; one of these foreign companies was registered only for the acceptance of reinsurance. In addition, there were 9 British and 5 foreign companies registered to write insurance but which had practically ceased to write new insurance.

The operations analysed in the following tables of this subsection, with the exception of Table 15, cover only those companies under Dominion registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 10, their operations cover about 95 p.c. of the insurance in force in Canada.

\* This total does not include fraternal insurance.

## Subsection 3.—Finances of Life Insurance Companies

The financial statistics of the following tables cover only life insurance companies with Dominion registration and do not include fraternal organizations and provincial licensees. In the cases of British and foreign companies, the figures apply only to their assets, liabilities and operations in Canada but, in the case of Canadian companies, assets and liabilities, income received and expenditure made, arise in part from business abroad.

## 16.—Assets of Canadian Life Companies with Dominion Registration and Assets in Canada of British and Foreign Life Companies, 1938-42

NOTE.—One British company transacting fire insurance in Canada transacts also life insurance in Canada, and inasmuch as a separation of assets has not been made between these two classes, the assets in Canada are not included here, but are included in the assets of British companies shown in Table 7, p. 918.

<sup>1</sup> Includes income or expenditure on business outside of Canada.<sup>2</sup> Income in Canada.<sup>3</sup> Expenditure in Canada.

### Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 19 gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries) and unless the actuary certifies to the solvency of each fund a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the 12 Canadian societies reporting to the Insurance Department of the Dominion Government, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain Dominion authority precedent to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies have since obtained Dominion authority to transact business, also some foreign societies that had not previously been licensed by the provinces. Of both classes of society, 30 transacted business in Canada during 1942.

<sup>1</sup> Canadian business.

**Subsection 5.—Life Insurance in Force Out of Canada by Canadian  
Companies Registered by the Dominion Government**

Tables 20 and 21 give summary statistics of insurance in force as at Dec. 31, 1941 and 1942, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. More than 63 p.c. of all such business in force was written in United States currency and over 23 p.c. in sterling. From another standpoint, over 32 p.c. was written in currency of British countries outside Canada and over 67 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had, at Dec. 31, 1942, life insurance in force in countries outside Canada amounting to \$3,326,414,241. As shown in Table 20, insurance in force in currencies other than Canadian amounted to \$3,223,437,699. The difference between these figures is presumably the net

amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1942, amounted to \$998,895,982. Since the business in force in Canada of these companies at Dec. 31, 1942, amounted to \$5,184,568,369, the total business on their books, Canadian and non-Canadian, amounted to \$8,510,982,610. Thus over 39 p.c. of the total business in force was out of Canada.

**20.—Life Insurance Effected and in Force, and Reserves<sup>1</sup>, by Canadian Companies (Excluding Fraternal Societies) Operating Under Dominion Registration, in Currencies Other Than Canadian, by Companies, 1911 and 1942.**

NOTE.—Figures are given in Canadian dollars, mainly at par rates of exchange.

<sup>1</sup> The 1941 figures show actuarial reserves but, since the 1942 statements did not show reserves by currencies, the figures for that year are for full liabilities, the greater part of which, of course, represent reserves.

**Subsection 6.—Grand Total of All Life Insurance in Canada and the Business of Canadian Organizations Abroad**

The first part of Table 22 summarizes the business outside of Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 10, the total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained as in the second part of Table 22. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations.

**22.—Business Abroad of Canadian Life Companies and Grand Total of All Life Insurance Business in Canada and Canadian Business Abroad, 1941 and 1942**

NOTE.—Figures for business in Canada will be found in Table 10, p. 921.

**Section 3.—Miscellaneous Insurance**

Since 1875 the growth of insurance business other than fire and life has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance—the only four classes of miscellaneous insurance then transacted—was 5, 3, 1 and 1, respectively. The report for the year 1940 shows that miscellaneous insurance in Canada now includes various forms of accident and 24 other classes of insurance transacted by Dominion companies. In 1880, 10 companies transacted business of the miscellaneous kind, but in 1942 such insurance was issued by 275 companies, of which 58 were Canadian, 71 British and 146 foreign; 222 of these 275 companies also transacted fire insurance. In addition,

20 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 2 fraternal orders or societies carried on accident insurance only.

Table 23, which shows the division of business in this field between Dominion and provincial licensees, indicates that, as in the cases of fire and life insurance, the bulk of the business (about 88 p.c. in this case) is transacted by companies with Dominion registration.

Since, as indicated above, most of the companies carrying on miscellaneous insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditures for all operations are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this chapter. Table 25 gives similar figures for the 11 Canadian companies whose transactions are confined to insurance other than fire and life. Similarly, in 1942, there were 3 British and 41 foreign companies whose operations were limited to the same field.

## Section 4.—Insurance As It Affects the Balance of International Payments

The short article "Insurance as it Affects the Balance of International Payments" which appeared at pp. 870-871 of the Canada Year Book 1942, has not been re-printed in this edition owing to the fact that only minor changes have taken place in this field since that date.

CHAPTER XXVI.—EDUCATION AND RESEARCH\*

CONSPECTUS

	PAGE		PAGE

Subsection 2. Private Schools.....	948	SECTION 4. MUSEUMS AND ART.....	953
Subsection 3. Higher Education.....	949		

A special article entitled "Recent Advances in the Field of Education in Canada" is given at pp. 876-883 of the 1941 edition of the Year Book. This article, in addition to outlining recent trends in elementary, secondary and higher education, provides data on post-school education and the educational services being conducted for the benefit of members of the Armed Forces.

**Special Work in Connection with the Armed Forces.**—During the war years particularly, there has been a good deal of educational activity, formal as well as informal, which is not recorded in this Chapter. Reference to work under the War Emergency Training Program is made in the Labour Chapter at pp. 716-718. Technical training within the Armed Services is additional to this again. The technical training of a Naval personnel of more than 80,000, an Army personnel of more than 450,000 and an Air Force personnel of more than 200,000 has been in reality an educational enterprise of great proportions. And educational work in the Services has not been only technical in character. Provision was made for general education in the Navy by the establishment of a Department of Naval Education in 1941, in the Air Force by an Education Section established in 1942, and by a Directorate of Army Education in 1943. These in effect supplemented and extended work carried on by the Canadian Legion Educational Services from the early months of the War.

The typical Education Officer in the Services is a university graduate with teaching experience in secondary schools. Duties vary somewhat between the Services, but include in all cases the organization of discussion groups and some responsibility for making educational books available. Through the medium of Canadian Legion Educational Services it is now possible for the Education Officer to direct the men of his unit to correspondence courses at all levels from the most elementary to university graduation. Provincial Departments of Education and universities in all parts of the country have co-operated to make this possible.

By the end of 1943 something like 100,000 men had been discharged from the Armed Forces. Provision for them, and for those who will be demobilized later, to resume their education is being administered by the Rehabilitation Branch of the Department of Pensions and National Health. It is anticipated that the plan will result in a heavy post-war enrolment, especially in universities and technical schools.

\* Prepared or revised, except for those parts otherwise indicated, by J. E. Robbins, M.A., Ph.D., Chief, Education Statistics Branch, Dominion Bureau of Statistics. This Branch is concerned with compiling and publishing comparable data relating to educational institutions throughout Canada, and to this end co-operates with the provincial Departments of Education. A list of the publications of this Branch will be found in Chapter XXX, under "Education".

Among the adult civil population, too, the War has given an impetus to educational activity. It is difficult to report upon in a statistical way, but interested persons may obtain information on trends and developments from the Canadian Association for Adult Education, 198 College Street, Toronto.

### Section 1.—Schools, Colleges and Universities

The British North America Act assigned public education in Canada, except in the case of the native Indian population, to the jurisdiction of the Provincial Governments. A system of public elementary and secondary education, financed mainly by local school authorities but assisted by provincial grants, has developed in each province. There are private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and that are not financed out of public money) but their enrolment is not large in comparison with that of the public schools. At the level of higher education, six provinces each have a provincial university, and the remaining three each have one or more colleges supported out of provincial funds. (For Statistics of Agricultural Schools and Colleges, see pp. 203-213.)

Table 1 gives statistics of enrolment in four different categories of educational institutions including Dominion Indian schools. Indian schools are treated more fully in Chapter XXIX, Miscellaneous Administration, along with other information on Indian affairs.

#### Subsection 1.—Provincially Controlled Schools

**Enrolment.**—An outline of the provincial systems of school administration is given at pp. 960-962 of the 1937 Year Book. Enrolment in provincially controlled schools along with enrolment in privately controlled schools, Dominion schools, and universities and colleges is given in Tables 1 and 1A. A table at p. 963 of the 1937 Year Book includes the record of annual enrolment by provinces from 1911 to 1935, together with the record of average daily attendance as shown in Table 2. The record of average daily attendance is the more comparable one, as between provinces, and probably the more significant for most purposes. Both figures have been practically at a standstill, or declining, in all provinces for several years because of the annually decreasing number of younger children entering the schools.

#### 2.—Average Daily Attendance in Provincially Controlled Schools, by Provinces, 1926-42

NOTE.—Figures for years prior to 1911 will be found at pp. 839-840 of the 1932 Year Book, and those from 1911 to 1925 at p. 963 of the 1937 edition.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total

<sup>1</sup> Revised since the publication of the 1942 Year Book.  
owing to change in method of reporting.

<sup>2</sup> Approximate: exact statistics lacking

A record of the age distribution of pupils in the provincially controlled schools of all provinces is presented in Table 3. The ages of boys and girls are not shown separately, and it should be mentioned that there is a definite tendency for boys to leave school at earlier ages than girls.

### 3.—Age Distribution of Pupils in Provincially Controlled Schools, by Provinces, 1941 and 1942

**Teaching Staffs.**—The teaching staffs of day schools under provincial control in Canada consisted, in 1941, of 75,984 teachers (19,587 males and 56,397 females) and in 1942 of 75,331 teachers (18,212 males and 57,119 females). Table 4 summarizes statistics regarding rates of salary, except for Quebec where comparable data are not available. A separate report, "Elementary and Secondary Education in Canada, 1938-40", deals in detail with the classification of teachers, the rates of salary paid and their teaching experience.

#### 4.—Teachers in All Provincially Controlled Schools, Classified According to Salary, by Provinces, 1941 and 1942

NOTE.—Comparable figures for Quebec are not available.

**Financial Statistics.**—Table 5 presents records of the finances of the boards operating provincial schools, in a comparable way, so far as this can be done with existing records.

### 5.—Financial Support of Provincially Controlled Schools in Canada, by Provinces, for Selected Fiscal Years 1926-42

NOTE.—The receipts shown in the following table do not include any amounts raised by loans, or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. With the exception of the Maritime Provinces, for which the information is not available, the total debenture indebtedness of the schools of each province is given annually, thus showing the net increase or decrease per year. Figures for 1914 to 1925 will be found at pp. 985-987 of the 1936 Year Book and those for intervening years from 1926 in the corresponding table of the 1937-42 editions.

Province and Year	Government Grants	Taxation within School Administrative Units	School Board Revenue from Counties	Total Current Revenue Recorded <sup>1</sup>	Debenture Indebtedness	Administrative Units Operating Schools

<sup>1</sup> Includes tuition fees where these are recorded. <sup>2</sup> Includes contributions to teachers' salaries in the Maritime Provinces and, in New Brunswick, grants made to schools by the Vocational Education Board. <sup>3</sup> Not available. <sup>4</sup> Revised since the publication of the 1942 Year Book. <sup>5</sup> Includes the township grant towards the salaries of rural public school teachers. <sup>6</sup> In the rural municipalities of Manitoba about three-fifths of the school support is equalized by a uniform rate levied over the whole municipality and in the greater part of rural Alberta there is equalization over the areas of more than forty school divisions.

### Subsection 2.—Private Schools

**Private Elementary and Secondary Schools.**—There are numerous private schools in each province doing work similar to that of the ordinary provincially controlled schools, but they are not publicly financed or administered and are not therefore included in Subsection 1, except in Quebec. Table 6 shows their enrolment at intervals from 1921, the year in which the Education Branch of the Dominion Bureau of Statistics commenced the collection of reports from private schools. A directory of the schools is included in the "Annual Survey of Education, 1936".

### 6.—Enrolment in Private Elementary and Secondary Schools in Canada, by Provinces, 1921, 1926, 1931 and 1938-42

NOTE.—Figures for the years 1932-35 are given at p. 970 of the 1937 Year Book and for 1936-37 at p. 881 of the 1942 edition.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total

**Business Colleges.**—There are private schools in fields of education other than elementary and secondary; most of these are in the field of business and commercial education. A record of enrolment of schools in this group has been made by the Education Branch of the Dominion Bureau of Statistics since 1921.

### 7.—Enrolment in Private Business and Commercial Schools (Business Colleges) in Canada, by Provinces, 1921, 1926, 1931 and 1938-42

NOTE.—Figures for the years 1932-35 are given at p. 971 of the 1937 Year Book and for 1936-37 at p. 881 of the 1942 edition.

### Subsection 3.—Higher Education

Editions of the Year Book previous to 1938 include considerable information concerning universities and colleges, such as enrolment, graduates, teaching staffs, and finances. Later detailed and historical statistics of this nature may be consulted in the report "Higher Education in Canada, 1940-42", published by the Dominion Bureau of Statistics.

**Enrolment.**—Comparison of enrolment figures for the first three years of the War with those of pre-war years shows that attendance at university has been well maintained. The academic year 1940 followed the normal rate of increase for 1938 and 1939 for students of university grade, but in 1941 the trend for male students began to recede and by 1942 had returned to the level of 1938. On the basis of full-time undergraduate enrolment by faculties the decrease in male students is about 4 p.c. This is partly offset by a small increase in women undergraduates. The major portion of the decrease is in the faculties of Arts and in such studies as law, education and theology. A significant increase is reported in pure science by those institutions which segregate this registration from the Arts faculty. This may be attributed to a demand for chemical warfare personnel and the increased emphasis placed on science by French-language institutions. Applied Science has increased 10 p.c. since 1938, the enrolment in 1942 (4,482) being the highest on record. Medicine remains in the vicinity of 3,000 which may be considered the maximum enrolment possible under war-time conditions of decreased teaching personnel.

Women students are still predominantly Arts and Science registrants but each of the schools, with the exception of the branches of social science, law and library science, has recorded a small increase in women. Two courses closely related to the rehabilitation of war casualties—occupational therapy and physiotherapy—have more than doubled their enrolment figures.

Post-graduate schools have experienced the greatest measure of depletion due to diversion of candidates to essential war work and responsible administrative positions within the Armed Forces. Registration in advanced courses of Arts and Science has dropped almost 15 p.c. from the 1939 enrolment.

### 8.—Financial Statistics of Universities and Colleges in Canada, for Selected Years 1921-42

NOTE.—The larger universities and many of the colleges in Canada are included and represent an enrolment of approximately 80 p.c. of the full-time students of university grade throughout the period. The institutions omitted are mainly those conducted by religious orders, where teachers receive little or no salary, and the financial returns consequently do not present a comparable record.

Year	Current Income					Deficits <sup>2</sup>	Surpluses <sup>2</sup>	Value of Capital Resources		
	From Endowment	Government Grants	Student Fees <sup>1</sup>	Miscellaneous	Total			Plant <sup>3</sup>	Endowment	Trust Funds

<sup>1</sup> Board and lodging not included.

<sup>2</sup> Combined deficits or surpluses of schools reporting.

<sup>3</sup> Site, buildings and equipment.

<sup>4</sup> Compiled from 1941; previous records not available.

**Graduates from Schools of Higher Education.**—The number of university graduates since 1923 or 1924 has increased by about 50 p.c. Nearly 3 p.c. of the young people growing up in Canada to-day become university graduates—about 4 p.c. of the young men and 1.5 p.c. of the young women. The numbers receiving degrees in Engineering, Applied Science and Scientific Agriculture have doubled since 1930. A similar increase has occurred in the Social Service graduates. Graduates in Medicine and Surgery have increased since 1938 under the impetus of war demands. The years 1940-42 have seen a material decrease in the graduates in Arts and Science, Law and Theology but the rate of increase in the other professions remains about the same as for previous years.

Women constitute about one-fourth of university graduates. There has been no tendency for them to increase in such professional lines of study as medicine, dentistry, pharmacy, law, theology or missionary courses. A few appear in the record of every branch of study into which enrolment can be divided, except forestry, but they have held in the main to Arts, including Science and Commerce, and to Education, Social Service and Public Health.

### 9.—Graduates from Canadian Universities and Colleges, for Selected Years 1931-42

NOTE.—For figures from 1920-30, see pp. 992-997 of the 1938 Year Book and for the intervening years from 1932 to 1939, pp. 883-885 of the 1942 edition.

## Section 2.—Scientific and Industrial Research in Canada

The field of scientific and industrial research in Canada is covered, so far as the Governments are concerned, by the Dominion and Provincial Departments of Agriculture, Forestry, Fisheries, Mines, etc., together with such special research bodies as the National Research Council, the Ontario Research Foundation and the Research Council of Alberta. The field of private research is, of course, much broader; it covers all research work conducted at universities, that are sponsored by scientific societies and foundations, and also the vast field of technical and industrial research conducted by individual industries, which in many cases benefit from their affiliations with parent organizations in the United States or the United Kingdom. A complete survey of the work being carried on by all research organizations in Canada is given at pp. 979-1012 of the 1940 edition of the Canada Year Book. The work in connection with the war effort that is being done by the National Research Council in co-operation with other Departments, is summarized in the Introduction to this volume.

## Section 3.—Libraries

The Dominion Bureau of Statistics publishes biennially a Survey of Libraries in Canada; it lists public, university, government and other special libraries, showing the location, size, etc., of each. The latest edition issued is the Survey for 1940-42.

Due to pressure on space in this edition of the Year Book, no extended comment is made here on the work of libraries. Concerning the most numerous group, however, the public libraries, the accompanying table is provided.

### 10.—Public Libraries, by Provinces, 1941, with Totals for Alternate Years 1931-41

### Section 4.—Museums and Art

At pp. 1025-1026 of the 1939 Year Book a list of the 37 museums (including art galleries) in Canada employing full-time staff is published, showing floor space and average daily attendance<sup>at</sup> each.

A complete directory of museums is available in a report, "Museums in Canada",\* published in 1938 by the Dominion Bureau of Statistics. See list of Articles at the front of this volume for material previously published.

\* This publication may be obtained on application to the Dominion Statistician, price 25 cents per copy.

### Section 1.—Administration

In Canada public health is administered by the Dominion and Provincial Governments through their respective health departments.

The Dominion Government deals only with such public health matters as are exclusively national, or interprovincial; thus hospitals for members and ex-members of the Armed Forces and other persons for whom treatment is a responsibility of the Department of Pensions and National Health, certain marine and immigrant hospitals and the two lazarettos for lepers are under Dominion administration. In addition, the Dominion Government makes grants to voluntary organizations that are engaged in public health work, notably: Canadian Welfare Council; Canadian National Institute for the Blind; Canadian Tuberculosis Association; Canadian National Committee for Mental Hygiene; Victorian Order of Nurses; Canadian Branch of the St. John Ambulance Association; Canadian Red Cross Society; Health League of Canada.

The Dominion Council of Health was created in 1919 with the object of obtaining uniform legislation and procedure in the various provinces. This body consists of the Deputy Minister of the Dominion Department of Pensions and National Health as Chairman; the chief executive officer of the provincial department or board of health of each province; together with such other persons, not exceeding five, as may be appointed by the Governor in Council to hold office for three years. Of these appointed members, four represent agriculture, labour, and urban and rural women's work, respectively; the fifth member is a scientific adviser on public health matters. The Council meets twice a year at Ottawa, when public health problems are discussed and uniform standards and legislation adopted.

In general, the administration of local public health activities and the establishment and maintenance of institutions are in the hands of the Provincial Governments, under Sect. 92 of the British North America Act, 1867. Under their control, municipalities, societies, and individuals initiate charitable and humane efforts. Important, and reflecting most clearly the benefits accruing from such work, are the provisions for medical inspection of school children. These are carried out in some cases by the district or sub-district medical health officers, and in others by public health nurses whose activities are confined to this work alone. In addition, expert advice and assistance are supplied free to children, teachers and parents. In many cases dental inspection is provided for.

Public hospitals are the most numerous among health institutions. They are usually erected and supported by municipalities, their actual administration being in the hands of boards of trustees; their revenue, in addition to that provided by the municipalities, is derived from grants from the Provincial Governments, donations of individuals and societies, and fees paid by patients. Admission and treatment are free of charge to all deserving applicants whose resources are so limited as to prevent them from receiving proper medical attention otherwise; it is generally expected of others that payments for services shall be made in proportion to costs and their ability to defray them. Such public hospitals include isolation and maternity hospitals, tuberculosis sanatoria, etc.

There are numerous private hospitals in Canada; these do not receive public grants. There are also hospitals that are conducted by various religious orders, most common in the Province of Quebec; Red Cross hospitals and outposts; and special hospitals that may be privately administered or maintained by the provinces.

Mental institutions (including homes for the feeble-minded and the epileptic) are in most cases under provincial administration, although in Nova Scotia some of the insane are still cared for in county institutions.

Penitentiaries are administered by the Dominion Government, while reformatories, industrial schools, prison farms, and similar corrective institutions are administered by the Provincial Governments.

### **Subsection 1.—Public Health Activities of the Dominion Government**

The public health activities of the Dominion Government are the particular charge of the National Health Branch of the Department of Pensions and National Health. The 1941 Year Book, at pp. 901-904, gives an account of the functions of each division of the Branch.

Since that account was published, a Nutrition Service has been established (during 1941) and four functions outlined: (1) To study food facilities in defence industries from a nutritional viewpoint, and to suggest improvements where possible; (2) To assist the public in maintaining and improving nutrition by advice as to proper purchase and preparation of foods; (3) To supply other Government Departments with nutritional information as requested; (4) To sponsor research in nutrition that seems necessary for the information or protection of the Canadian public.

### **Subsection 2.—Public Health Activities of the Provincial Governments\***

**Prince Edward Island.**—The supervision of public health matters in Prince Edward Island was placed, on July 1, 1931, under a specially created Department of Public Health, headed by a Minister and a Deputy Minister. Two part-time physicians, five full-time public health nurses, and two food and sanitary inspectors are employed. Under the direction of the Deputy Minister, the Province is divided into five public health districts and each nurse is assigned a territory in which she is responsible for the inspection of school children, home visits, home-nursing classes, immunizing and vaccinating clinics, etc. The sanitary and food inspectors make regular surveys of the food-manufacturing plants, school premises, hotels, boarding houses, restaurants, etc., throughout the Province.

The Provincial Government operates the Provincial Sanatorium under a Board of Commissioners, and an annual grant is made to assist ex-sanatorium patients who require assistance, and to other indigent tuberculous persons and their families.

\* The material under this heading has been revised by the respective provincial authorities.

The Prince Edward Island Tuberculosis Seals are maintaining at the present time two full-time nurses in the field, who work in close co-operation with the staff of the Provincial Sanatorium and the Department of Public Health.

Provision of an annual grant is also made to the general hospitals which, in turn, accept as free patients all indigent persons requiring hospital treatment: the expenses for the operation of a hospital for the insane are borne practically in full by the Provincial Government.

The Department of Health operates two venereal disease clinics, one at Charlottetown and the other at Summerside. All necessary medication is supplied free of charge, to persons who are not within reach of Public Health clinics.

**Nova Scotia.**—In Nova Scotia the Department of Public Health directs its energies to communicable disease control; pre-natal, post-natal, and school hygiene; sewage disposal; safety of milk and water supplies; collection of vital statistics; mental hygiene; and health education. The Department acts in an advisory capacity to local boards of health; makes regulations respecting any matter relevant to the public health; maintains a field force that provides a consulting service in tuberculosis and other health activities; supports a public-health nursing service with specially trained nurses, who work both in the schools and in the homes; gives a free public-health laboratory service that extends throughout the Province; supervises the provincial hospitals, both general and special; provides inspection of public general hospitals and humane institutions; stocks and dispenses sera and vaccines; and distributes literature on all phases of health.

In the autumn of 1940 the Province was divided into five health districts or Units and a qualified medical health officer was placed in charge of each. Each Unit has its office with clerks, a staff of public-health nurses, portable X-ray equipment and a depot for the distribution of sera and vaccines. In addition a competent health officer has been engaged to administer the health activities of Halifax city. This represents a marked public health advance. With the existing organization, as outlined, it will be possible to more completely correlate and standardize health work throughout the Province.

The Defence Forces and the Health Department have problems of mutual interest, and the closest co-operation between these two bodies has been maintained.

A unique development of the year 1942 was the opening of a "Kenny" treatment clinic for infantile paralysis.

**New Brunswick.**—The Department of Health, under the administration of a Minister of Health, was established in 1918. It provides the following services: general sanitation, including supervision of water supplies and sewage disposal; control of communicable diseases, including tuberculosis and venereal diseases; public health laboratory and the supply of biologicals; medical inspection of schools; collection of vital statistics; public-health nursing and child welfare; health education, and general supervision and co-ordination of the work of the sub-district boards of health. Under the Minister, the Department is directed by the Chief Medical Officer who is also Registrar General of Vital Statistics. The staff consists of a Director of Laboratories, 11 full-time medical health officers, a Director of Public Health Nursing Service and, in addition, a part-time Director of Venereal Disease Clinics. The Province through grants to sanatoria and to municipalities is now paying about 80 p.c. of the costs of sanatorium care for tuberculous patients.

**Quebec.**—The Provincial Government, by legislation passed in 1941 (5 Geo. VI c. 22), established a Department of Health and Social Welfare to deal with the administration of all matters concerning health, preventative medicine and social welfare (for the social welfare work undertaken by the Province see p. 666). From 1936 to 1941 provincial health matters were under the Department of Health which, in the former year, replaced the Health Service that operated under the Provincial Secretary. Since 1926 the system known as "County Sanitary Units", has been in operation. The purpose of the system is to provide a regular full-time service for each county or group of two or three adjoining counties that are included in the scheme. There are now 55 units of this kind, covering 65 counties. The Sanitary Officers of the old districts, whose number is now reduced to 11, supervise the few counties not organized into sanitary units. Many municipalities, such as Montreal and Quebec, have their own Health Bureaus.

The Department of Health and Social Welfare maintains, in addition to its administrative service, the following divisions: Laboratories, Sanitary Engineering, Demography, Mental Health, Public Almshouses, Sanitary Districts and Units, Epidemiology, Industrial Health, Food (including Maternal Health and Child Welfare), Venereal Diseases, Tuberculosis, Educational Health, Dental Educational Health, Advertising, etc.

Service is rendered in the form of consultations, public lectures, school inspections, itinerant clinics of pediatry and tuberculosis, inquiries of all kinds, immunizations, sanitation improvement, etc. Twenty-seven anti-tuberculosis dispensaries have been established and 70 clinics of pediatry, including those sponsored by the Provincial Government. During 1942, itinerant clinics and anti-tuberculosis dispensaries examined 89,516 persons. County sanitary units immunized 54,837 children against diphtheria; this brings the total so treated to 527,141.

**Ontario.**—The Department of Health of Ontario is under a Minister of the Government. In the direction of the departmental program, he is assisted by a Deputy Minister and the Chief Medical Officer of Health. The activities of the Department are divided into the following Divisions: Hospitals, Tuberculosis Prevention, Venereal Disease Prevention, Preventable Diseases, Laboratories, Maternal and Child Hygiene and Public Health Nursing, Oral Hygiene, Sanitary Engineering, Industrial Hygiene, and Nurse Registration including Inspection of Training Schools for Nurses.

The local health work is carried on (1942-43) by a Board of Health and a Medical Officer of Health in each of the 900 municipalities. Sixteen municipalities have full-time health officers.

The Department has attempted to meet the added responsibilities which impinge on the official health agency in time of war despite the very substantial loss of trained personnel to the Armed Forces both at the provincial and municipal level. Particular emphasis has been placed on the more effective control of venereal disease and the promotion of a more acceptable form of community public health administration. The increasing problems of hospitalization have also been reviewed during the year with the hope of evolving an adequate solution.

**Manitoba.**—Manitoba has an organized Department of Health and Public Welfare. The Health and Public Welfare Act states that the Minister shall preside over, and have the management and direction of the Department, and the Department shall have administrative jurisdiction over all matters in the Province that relate to health and public welfare. In regard to the administration of public welfare, reference should be made to pp. 667-668.

The Health Division of the Department of Health and Public Welfare is divided into three sections: (1) *Environmental Sanitation*, which consists of the Bureaus of Public Health Engineering, Industrial Hygiene, and Food and Milk Control. (The Bureau of Industrial Hygiene was started in 1943 to take care of the many hazards now appearing in industries, particularly those that have to do with the production of war materials.)

(2) *Preventive Medical Services*, which consists of the Bureaus of Disease Control (responsible for the control of acute communicable disease, venereal disease and tuberculosis); Maternal and Child Hygiene (with divisions of maternal health, infant health, pre-school health, and school health); and Public Health Nursing.

(3) *Psychiatry and Hospitalization*, which has two Bureaus: The Bureau of Psychiatry supervises and controls the four mental institutions (the Psychopathic Hospital, Winnipeg; the Hospitals for Mental Diseases at Selkirk and Brandon; and the Manitoba School for Mentally Defective Persons at Portage la Prairie): this Bureau also provides for the mental hygiene activities of the Province. The Bureau of Hospital Care is responsible for the supervision of hospitals and the payment of Provincial Government grants to them.

The Section of Local Health and Welfare Services is responsible for the control of local part-time Health Officers, the establishment and supervision of local Health Units, and consultative services to local Health Departments throughout the Province.

**Saskatchewan.**—The Department of Public Health has been organized since 1923 under a Minister and a Deputy Minister. A Council of Public Health, which consists of the Deputy Minister as chairman, three medical practitioners, a Veterinary Surgeon and a Civil Engineer, acts in an advisory capacity.

The Department is organized under seven Divisions: (1) *The Division of Administration* co-ordinates the activities of the Department as a whole, and directs medical rulings in certain unorganized territories. (2) *The Division of Public Health Nursing* supervises maternity grants; organizes health inspection of school children, home visits, pre-school and preventive clinics in co-operation with local physicians; organizes dental clinics in northern areas; and conducts a Public Health Nursing Service throughout the Province. (3) *The Division of Communicable Diseases* administers the regulations governing epidemiology, cemeteries, care of the dead, supervision of trachoma, venereal diseases, tuberculosis (other than the organization of the Anti-Tuberculosis League) and poliomyelitis. All biologicals and other treatment are provided free of charge to the physicians and patients. (4) *The Division of Sanitation* supervises sewage systems; food, milk, and ice supplies; and urban and rural sanitation. (5) *The Division of Laboratories* carries on research in bacteriology, serology, pathology, makes chemical analyses and conducts medico-legal work. (6) *The Office of the Registrar General* administers the Vital Statistics Act and the Marriage Act. The system used in classifying vital statistics has been decided upon in co-operation with other provinces and the Dominion Bureau of Statistics. (7) *The Division of Mental Services* administers the mental institutions established under its provisions at North Battleford, Weyburn and Regina.

**Union Hospitals in Saskatchewan.**—In addition to the general hospitals, there exists a system known as the "Union Hospital Organization" designed to furnish hospital accommodation in all rural districts. Under the Union Hospital Act, two or more municipalities may co-operate in building, equipping and maintaining a hospital where free treatments may be provided for certain classes of patients, the cost being borne by the municipalities concerned.

*Health Services Board.*—This Board has authority to approve by-laws and agreements made by municipal councils for medical and hospital services and may consider methods for more equitable distribution of the costs of illness and the needs of the people with respect to health services generally.

*Cancer Commission.*—This Commission, created in 1930, has established consultative, diagnostic and treatment clinics for cancer at Regina and Saskatoon. "Radon" is manufactured at an emanation plant at Saskatoon. Close contact is maintained with current advances in the prevention, diagnosis and treatment of this disease.

*Relief Medical Services Branch.*—Grants are paid to physicians, dentists and approved hospitals for adequate relief medical services to needy residents in any part of the Province outside municipal jurisdiction, including a group known as "Northern Settlers", who have been transferred from the drought area in the south to the northern section. Insulin is supplied free to diabetic patients who are unable to purchase it.

Plans are nearing completion for the establishment of centres at Saskatoon and Regina for the free treatment of poliomyelitis cases.

**Alberta.**—The Department of Public Health administers all public health matters in the Province and includes the following Divisions: Communicable Diseases; Sanitary Engineering and Sanitation; Public Health Education; Laboratory; Public Health Nursing; Municipal Hospitals; Hospital Inspection; Social Hygiene; Vital Statistics; Mental Hygiene; Dental Hygiene; Child Welfare; and Cancer.

The following institutions are administered by the Department: Central Alberta Sanatorium; the Provincial Mental Hospital, Ponoka; the Provincial Training School, Red Deer; the Provincial Auxiliary Hospital, Claresholm; the Provincial Auxiliary Hospital, Raymond; the Provincial Mental Institute, Edmonton.

Free clinics for venereal diseases are maintained in the four principal cities and in the two provincial gaols. Educational work on social hygiene is carried on by means of lectures, moving pictures, bulletins and radio talks.

Free treatment for infectious types of tuberculosis is provided for any bona fide resident, i.e., for any person who has resided in the Province for at least one year immediately preceding admission for treatment in the sanatorium.

Under the authority of the Poliomyelitis Sufferers Act, 1938, provision is made for the free treatment in special hospitals of patients suffering from this disease. Provision is also made for academic instruction, vocational training, and rehabilitation of those suffering from paralysis resulting from this disease.

The Department of Public Health has taken the first steps in connection with the inauguration of a cancer service in the Province. Diagnostic cancer clinics have been established at Edmonton and Calgary and are conducted weekly. Provision has been made whereby patients referred to the diagnostic clinic by their own physicians, who are examined by the clinic and found to require deep X-ray or radium therapy or surgery, are treated free of charge.

**British Columbia.**—The Provincial Health Officer, responsible to the Provincial Board of Health, administers the laws relating to public health in British Columbia and carries out the policy laid down by the Minister. Six Divisions and two Bureaus supply specialized services: the Divisions of Tuberculosis Control,

Venereal Disease Control, Laboratories, Public Health Engineering, Public Health Education and Vital Statistics; and the Bureaus of Administration and of Local Health Services.

Government clinics for diagnosis and treatment are operated at Vancouver, Victoria, New Westminster and Trail while consultative services and free drugs are supplied to private practitioners throughout the Province.

Under the Bureau of Local Health Services contact is maintained with the numerous local health services, such as Public Health Nursing, local Health Officers, School Medical Services and Health Units. The Health Unit is accepted by Public Health authorities as the answer to the problem of providing adequate local health service within the means of the local taxpayers. In British Columbia Health Units are responsible for all the generalized public-health activities and are the media through which the specialized provincial health services are translated into action for the people. Public Health Nurses serve most parts of the Province and, together with Health Units and full-time city health departments, close to 90 p.c. of the population. The funds to establish such full-time Health Units are provided from both the School Boards and councils of the component communities and from the Provincial Government. The grants from the Provincial Government are made from two separate Departments. The Provincial Board of Health makes a grant for the entire Health Unit while the grant from the Education Department is given in consideration of the Public Health Nurses of the Units who undertake the accepted school health program.

## Section 2.—Institutional Statistics\*

Under authority granted by the Dominion Government in 1930, the Dominion Bureau of Statistics has, since that date, co-operated with the provincial authorities through the Census of Institutions, and now collects, on a Dominion-wide basis, statistics for the following types of institutions: (1) *Hospitals*—institutions primarily engaged in the prevention and cure of physical sickness and disease, such as hospitals for the sick, sanatoria, and institutions for incurables and those under the heading "Dominion" in Table 1. Statistics are not available for hospitals under the control of the Department of National Defence. (2) *Mental and neurological institutions*—such as asylums for the insane, institutions for the feeble-minded, epileptic, etc., devoted to the treatment and care of mental ailments. (3) *Charitable and benevolent institutions*—caring for the poor and the destitute of all ages, such as homes for the aged, county refuges, orphanages, etc. The statistics regarding this group will now be found at pp. 677-682. (4) *Penal and corrective institutions*—having for their purpose the reclamation of criminals and the reformation and training of delinquent boys and girls. Institutional statistics, as summarized in Table 1, may, therefore, be regarded as dealing with the four main types of social pathology, viz., physical, mental, economic and moral.

---

\* The statistics of this section have been revised by J. C. Brady, M.A., Officer in Charge of the Census of Institutions, Dominion Bureau of Statistics, Ottawa.

<sup>1</sup> These institutions are classified in detail in Table 1.

<sup>2</sup> Includes 10 general hospitals in Yukon and N.W.T. reporting: 5 salaried doctors, 24 graduate nurses, 71 total personnel; 5 X-ray and 2 clinical laboratories; 2,109 admissions, 95 live births, a total of 2,304 under treatment, 2,117 discharges, 64 deaths and 41,626 collective days' stay. Includes one private hospital in N.W.T. with: one salaried doctor, 3 graduate nurses, 7 total personnel; one X-ray and clinical laboratory; 250 admissions, 35 births, a total of 293 under treatment, 286 discharges, 1 death and 2,824 collective days' stay.

**Organized Services in Public General Hospitals.**—Organized services, which are analysed in Table 4, may be defined as specialized hospital departments or services in charge of specialists with up-to-date equipment and a technical staff specially devoted to problems in the indicated fields. Facilities available in a hospital merely for the use of general practitioners are not considered as organized services. Only organized services in public general hospitals are considered here and not such organized services in public hospitals other than general (as shown in the first part of Table 1) nor those in private, Dominion, tuberculosis and mental hospitals. It is, however, in the larger public general hospitals that the majority of such organized special services are to be found. Many of the smaller public general hospitals have facilities for study and treatment in the fields indicated here, but since they are not organized services as defined above, such facilities are not included in the figures. Table 1 indicates that, in 1942, there were 618 public general hospitals; 245 of these had organized medical staffs with 8,818 staff doctors.

## 4.—Organized Services and Staffs in Public General Hospitals, by Provinces, 1942

NOTE.—Dashes in this table indicate that no organized service has been reported in the case so indicated.

**Out-Patient Departments.**—Out-patient departments are operated in connection with hospitals or other institutions, and treat patients who do not occupy beds in the hospital. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to a hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it will not be possible to give the average cost per patient.

The statistics of Table 5 are rendered more complicated than is desirable because of lack of uniformity in the method of reporting patients and treatments. The majority of hospitals report both patients and treatments, but a considerable number report either patients or treatments, but not both.

### 5.—Out-Patient Departments of Public Hospitals, by Provinces, 1941 and 1942

**Tuberculosis Institutions.**—The statistics regarding institutions for the treatment of tuberculosis shown in Table 6, include special units for the treatment of tuberculosis in general hospitals as well as the specialized sanatoria shown separately in Table 1. The deaths in these institutions from tuberculosis as shown here for 1942 were only 36.9 p.c. of the total deaths from the disease in Canada as shown under Vital Statistics at p. 162 of this edition. However, the death rate from this disease has shown an encouraging decline since 1926. More complete details regarding these institutions and the treatment of patients are given in the "Annual Report of Tuberculosis Institutions", published by the Dominion Bureau of Statistics.

<sup>1</sup> Includes other personnel.

**Subsection 2.—Statistics of Mental Hospitals**

The Census of Mental Institutions of Canada for June 1, 1931, gave the number of patients in all mental institutions as 31,686, of whom 24,188 were insane, 7,006 mentally deficient, and 492 epileptic. The numbers of patients in mental institutions per 100,000 of the general population were: 305.4 on June 1, 1931; 316.6 on Dec. 31, 1932; 324.9 on Dec. 31, 1933; 335.6 on Dec. 31, 1934; 348.2 on Dec. 31, 1935; 359.5 on Dec. 31, 1936; 373.5 on Dec. 31, 1937; 378.7 on Dec. 31, 1938; 380.4 on Dec. 31, 1939; 388.0 on Dec. 31, 1940; 392.5 on Dec. 31, 1941; and 394.2 on Dec. 31, 1942.

At Dec. 31, 1942, there were 45,937 patients in mental institutions in Canada and 4,241 on parole, making a total of 50,178, whereas the normal bed capacity was only 41,762, showing a seriously overcrowded situation if the patient population on Jan. 1, 1942, and the admissions and separations during the year are considered. This overcrowded condition was specially marked in British Columbia, Manitoba, Saskatchewan, Ontario and Quebec. Of the 45,937 resident patients in 1942, 35,518 were insane, 9,578 were mentally deficient, 611 were epileptic and 230 mental cases were otherwise classified.

Data are not available to indicate to what extent the increasing trend of patients per 100,000 population is due to more complete diagnosis and care than formerly, and to what extent there is an actual increase in the proportion of the population requiring treatment for mental diseases.

### Subsection 3.—Corrective and Reformative Institutions

On June 1, 1941, there were 28 corrective and reformative institutions in Canada with a total inmate population of 4,051; of this number 3,118 were males and 933 were females. Of the total number of institutions, 14 were for males and 14 for females. Detailed statistics of crime and delinquency (which are presented on an annual basis) as distinct from these institutional statistics are given in Chapter XXVIII.

## Section 3.—The Victorian Order of Nurses

The Victorian Order of Nurses is a voluntary public-health agency, national in scope and having as its primary object the care of the sick in their own homes by visiting nurses. In 1942 there were 99 branches of the Order distributed as follows: Nova Scotia, 16; New Brunswick, 7; Quebec, 5; Ontario, 55; Manitoba, 1; Saskatchewan, 3; Alberta, 2; and British Columbia 10. The affairs of each branch are directed by a local committee, which raises the money necessary to carry on the work. However, the policies and professional standards set by the national organization are accepted by the local committees. The Board of Governors of the national organization is made up largely of representatives appointed by the branches.

Registered nurses are employed by the Order and have, in addition, post-graduate training in public-health nursing. All appointments are approved by the headquarters at Ottawa, which also assumes responsibility for the supervision of the nurses' work in the field, thus ensuring a uniform standard of service.

The practical result of nursing care and health education given to maternity patients is seen in the low maternal death rate among those under care. The rate per 1,000 live births attended by the Order during the years 1938-42, inclusive, was 1.54 compared with a rate of 3.78 for Canada as a whole in the same period.

During 1942 the 387 nurses in the field gave nursing care to 88,646 patients. Health teaching is an important function of the visiting nurse, and their entry into so many homes provides an unparalleled opportunity to make a worth-while contribution toward the upbuilding of the health of the Canadian people.

The Order provides a community service, available to everyone in the area served, regardless of race, creed or economic status. The nurses give care on a visit basis to medical, surgical and maternity patients under medical direction and care for a large group of people who would otherwise be neglected. The budget of the average man makes very little allowance for the cost of illness. The patient is expected to pay the cost of the visit, but the fee is adjusted to suit the family income and service is never refused because of inability to pay. Of the 723,145 visits made in 1942, 54 p.c. were free, 28 p.c. were paid and 18 p.c. were partly paid. The cost of the service to those unable to pay is taken care of by municipal grants and funds collected by means of campaigns.

In smaller centres where the Victorian Order nurse is the only public-health nurse the program of work is usually enlarged to include a school nursing service, child hygiene and other public-health nursing services.

While the nurses are doing their 'bit' in caring for soldiers' families and helping to keep up the morale of the people, the program has not been changed because of the War. The Victorian Order was instituted and has been maintained for over forty years with one definite purpose—home nursing service—in time of war no less than in time of peace.

### Section 4.—The Canadian Red Cross Society\*

The Canadian Red Cross Society is closely allied with the Dominion and Provincial Governments in both its extensive war and peace-time undertakings. The Society was founded in 1896 and incorporated in 1909, its purpose being to furnish volunteer aid to the sick and wounded of armies in time of war, and, in time of peace or war, to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world. The total membership is 2,096,608—1,239,303 seniors and 857,305 juniors.

The Canadian Red Cross Corps of uniformed, volunteer, trained women numbered 4,840 members in 97 detachments throughout Canada, at Dec. 31, 1942, with reserves reported of about 17,000. A number of Corps members are on duty with the Society overseas.

**Peace-Time Services of the Red Cross.**—Since the inception of its peace-time program in 1920, the Canadian Red Cross Society has established an outpost hospital service that provides medical and public-health services in isolated communities. In the 51 hospitals and nursing stations operating throughout Canada during 1942, 37,000 patients were treated, 4,900 operations were performed and 2,100 children born. There were 819 clinics held and the Red Cross nurses examined 19,902 children. The Red Cross has also provided aid to ex-service men; nutritional and visiting housekeepers' services; highway first-aid posts, etc.; and conducted home-nursing and first-aid courses.

The Junior Red Cross, an organization devoted to the promotion of the principles of health, good citizenship and international friendliness, has helped 22,348 crippled children since its inception. At the end of 1942, it had a membership of 857,305 pupils in 29,192 branches in Canada and Newfoundland. Contributions to the Junior Red Cross Fund have financed 14 mobile kitchens, 6 ambulances, 5 utilicons, 2 station wagons, 1 mobile canteen and 6 carrier canteens, and 14 war nurseries in Britain.

**War Services of the Red Cross.**—The work accomplished by the Red Cross up to the end of December, 1942, is summarized in the following paragraphs.

**Overseas Work.**—A 600-bed military hospital has been built in England, furnished and fully equipped at a cost of \$755,000 and turned over to the Canadian Department of National Defence. This hospital is considered to be one of the finest military hospitals in Britain and is giving the best of medical treatment to Canada's sick and wounded. Thirty-eight mobile kitchen units, each equipped to feed 250 workers at a time, have been presented to Britain's fire fighters. A vast organization of Canadian Red Cross "hospital visitors" has been built up around hospitals, to be ready on call to act as "friends from home" and to provide special diets, extra comforts and personal services to Canadian patients; the Maple Leaf Clubs have become exceptionally popular with the Forces and provide excellent accommodation, recreation and entertainment; and inquiry bureaus have been organized in Britain and Canada to obtain information regarding relatives and friends who are missing, wounded, or prisoners of war.

**Overseas Shipments.**—Shipments up to Dec. 31, 1942, consisted of: 300 ambulances and other motor-vehicles; 375,000 cases containing over 21,000,000 articles of hospital supplies, comforts for the troops and relief clothing; 2,000,000 prisoners-

\*Revised by Dr. F. W. Routley, National Commissioner, Canadian Red Cross Society.

of-war food parcels. Distribution of supplies was made, not only to Canadian Armed Forces but to all the Allied Nations. Jam and honey were provided to over 1,000,000 civilian war sufferers in Britain, particularly children in war nurseries and orphanages, Women's Institutes and other organizations.

*Canadian Work.*—The packing of food parcels for prisoners of war, begun in 1941, reached a total of 100,000 a week in the five packing depots at Montreal, Toronto, Hamilton, Windsor and Winnipeg. By the end of 1942 over 3,000,000 parcels had been packed, of which 2,000,000 were shipped, the balance awaiting shipment early in the new year.

Through the Red Cross Volunteer blood-donor clinics, opened in January, 1940, 220,397 blood donations were received and processed into serum up to the end of December, 1942. The 37 clinics and 2 mobile units in operation at that time reached an objective of 6,000 transfusions a week; this has been raised to a minimum of 15,000 donations a week. The serum has been used in bombed areas and battle-fields on fighting fronts.

Since the beginning of the War, 2,707,808 comforts and supplies have been given to the Armed Forces in training or stationed in Canada as well as to hospital patients.

Disaster relief organizations for ship-wrecked seamen and casualties have been set up at seaboard and other vulnerable points in Canada; they include 47 emergency hospital units, 19 mobile surgical units and vast quantities of hospital supplies and relief clothing.

*Financing of Red Cross Activities.*—From the outbreak of war to Dec. 31, 1942, voluntary contributions from all sources to the Society amounted to \$31,285,818. With the 1943 campaign returns added, this total increased to approximately \$42,000,000. The two major items of expenditures were for hospital supplies, comforts for the Armed Forces and hospital patients, and clothing for civilian war sufferers (43 p.c.) and for prisoners-of-war food parcels (32 p.c.).

## Section 5.—The St. John Ambulance Association

The origin of the St. John Ambulance Association goes back to the Crusades and the Knights of St. John and of Malta. His Majesty the King is supreme head of the Order which has headquarters at London and units in all parts of the British Empire. In Canada, the Governor General is the Knight Commander and meetings of the Order are held at Government House. At the head of the Canadian Branch is the Commandery of the Grand Priory of the British Realm of the Venerable Order of the Hospital of St. John of Jerusalem, usually referred to as the Order of St. John.

The Canadian Branch has its headquarters and national offices in St. John House, Ottawa, with branches in every province, and local centres in hundreds of cities and towns throughout Canada. There are two distinct branches: the Association whose members train instructors, conduct classes and issue various certificates; and the Brigade, members of which are in uniform under a form of military discipline, receive constant supplementary training, and are available for call whenever the need arises. The Brigade strength is approximately 10,000 persons, about equally divided between the Ambulance Division (men) and the Nursing Division (women), and organized into about 250 divisions from coast to coast.

The primary purpose of the Association is to teach First Aid and Home Nursing to both civilians and the Armed Forces and to provide trained and organized personnel to help in time of disaster or national emergency. This work was started in Canada in 1895 and, since then, about 750,000 persons have received certificates and other awards. Since 1940 the number has been close to, or above, 100,000 a year. During 1942, 118,490 certificates were issued and in the first half of 1943, 66,310. Many thousands of these went to members of the Armed Forces to which trained instructors and textbooks have been provided in large numbers. In 1942 an order was issued providing that every member of the Royal Canadian Air Force, men and women, must take St. John First Aid instruction. The railways of Canada and many large industrial concerns maintain their own St. John centres. The training of personnel of Air Raid Precaution in First Aid work has been a large war-time undertaking.

The uniformed Brigade performs a very special function in war-time. At port cities it assists the regular R.C.A.M.C. doctors and nurses, helps in hospitals and merchant seamen's hostels and shipwrecked seamen. It largely staffs the First Aid Posts for A.R.P. Early in 1943 when Voluntary Aid Detachments were made an integral part of the Army Nursing Service the Brigade instituted a recruiting campaign to enlist V.A.D. or nurses' aides and many are now on duty in Army hospitals. Others are helping short-staffed civilian hospitals. All wear the grey and white uniform with the eight-pointed cross of St. John. Uniformed St. John Brigade members are to be found at all exhibitions, large demonstrations or wherever crowds gather. A new departure in 1943 has been the training of Brigade members as blood-typing technicians. The entire personnel of big war industries are typed so that, in the event of serious accident, blood transfusions may be given in the quickest possible time.

Early in 1943 a new agreement was entered into between the Canadian Red Cross Society and the St. John Ambulance Association whereby future training would come under a joint board consisting of representatives of both organizations and a chairman appointed by the Minister of War Services. Certificates are to be issued under the joint name. The object was to avoid duplication, pool instructors and make training available to as large a number of persons as possible. Further, under this new arrangement, which has been approved under Order in Council, the finances necessary to carry on St. John activity in Canada will come from the annual public appeal of the Red Cross.

# CHAPTER XXVIII.—JUDICIAL AND PENITENTIARY STATISTICS\*

## CONSPECTUS

Subsection 2. Non-indictable Convictions of Adults.....	983		

**Canadian Criminal Law and Procedure.**—A review of the development of the Criminal Code in Canada is given at pp. 1085-1087 of the 1934-35 edition of the Year Book; it includes a résumé of procedure and an account of the jurisdiction of the various classes of judges and magistrates.

The statistics presented in this chapter are summarized from the "Annual Report of Statistics of Criminal and Other Offences", and are collected directly from the criminal courts in the different judicial districts throughout the Dominion. There are 156 judicial districts, including 2 sub-districts, divided by provinces as follows: Prince Edward Island 3, Nova Scotia 18, New Brunswick 15, Quebec 25, Ontario 47, Manitoba 6, Saskatchewan 21, Alberta 12, British Columbia 8 and Yukon 1.

## Section 1.—General Analyses

Crime is divided into two definite classes, criminal or 'indictable' offences, which include all serious crime covered by the Criminal Code (see pp. 979-983), and summary or 'non-indictable' offences, which comprise breaches of municipal by-laws, traffic laws and other less serious crimes (see pp. 983-986). Generally, indictable offences are triable by jury, although in certain cases the accused is accorded the right of election as to whether he be tried by jury or before a judge without the intervention of a jury, but in other cases the jurisdiction of the magistrate as to trial is absolute and does not depend upon the consent of the accused. Non-indictable offences are usually dealt with summarily by police magistrates under the Summary Convictions Act. The term "indictable" applies to offences of adults, similar offences committed by juveniles† being termed "major" offences; what are termed non-indictable offences when committed by adults are referred to as "minor" offences when committed by juveniles.

During 1942, there were 626,647 cases of adult offenders handled by the courts as compared with 596,582 cases in 1941. Of this total 45,283 cases were of an indictable nature while 581,364 cases were non-indictable. The corresponding figures for 1941 were 49,026 indictable and 547,556 non-indictable cases. In the case of juvenile offenders (under 16 years of age) 13,802 young persons were brought before the courts of which 2,044 were dismissed or had their cases adjourned *sine die*.

\* Revised by H. M. Boyd, Chief, Judicial Statistics Branch, Dominion Bureau of Statistics. The sixty-fifth "Annual Report of Statistics of Criminal and Other Offences", for the year ended Sept. 30, 1941, is obtainable from the Dominion Bureau of Statistics, Price 50 cents.

† The term "juvenile" is restricted to persons under 16 years of age.

**Convictions for All Offences.**—Total convictions in 1942 increased by 31,919 or 5.3 p.c. as compared with 1941. Of the total convictions, 11,758 were cases in which juveniles were found guilty of major or minor offences, an increase of 1,448 or 14.0 p.c. as compared with 1941.

Ontario led the provinces in convictions per 100,000 population during 1942, the ratio being 7,966; Quebec was second and Manitoba third.

**Adults.**—Alberta led in the rate of convictions for indictable offences, Ontario was second and British Columbia third, with Manitoba a close fourth. Ontario's rate of 7,457 convictions for non-indictable offences per 100,000 population was the highest. Quebec was second in this respect and Manitoba third.

**Juveniles.**—The ratios for juvenile crime are, of course, relatively small, but they are very important from a sociological standpoint. Ontario is clearly in the lead as regards major offences and Quebec as regards minor offences.

CONVICTIONS PER 100,000 POPULATION BY TYPE OF OFFENCE, FOR EACH PROVINCE, 1942

Province or Territory	Indictable	Non-Indictable	Total Adult	Major	Minor	Total Juvenile	Grand Total
Prince Edward Island.....	214	1,584	1,798	62	43	105	1,903

CANADA.....	337	4,988	5,325	59	42	101	5,426

**War-Time Trends.**—During the three-year period from Sept. 30, 1939, to Sept. 30, 1942, convictions for all crime in Canada increased from 484,328 to 632,431 or by 30.6 p.c. During a similar period preceding the War, 1936-39, the increase was 15.0 p.c.—from 420,975 cases to 484,328 cases. Thus the total number of convictions has increased twice as fast during the first three war years as it did during the three years immediately preceding the War. As noted under the respective headings below, increased rates of convictions during the war years have occurred in both adult and juvenile crime. It is significant that at no time since statistics of juvenile crime have been compiled separately (1922) has any period shown such a marked acceleration in the juvenile crime rate as the first three years of war.

In using the statistics of Table 1, it should be remembered that, while the Criminal Code undergoes little change over periods of time, the figures for summary convictions are greatly influenced by the changing customs of the people, and show a strong tendency to increase with the increasing urbanization of the population. Non-indictable offences as a class have shown an increase in proportion to all offences during the past three years, this increase being the result, mainly, of the application of the 40 miles an hour speed law throughout Canada, the addition of National Registration Acts, the stricter enforcement of the Radio Licence Act and other extensions of the field of non-indictable offences under war-time regulations.

The most significant figures in Table 1 are those of indictable offences per 100,000 population. Attention is drawn to the fact that while convictions for non-indictable offences have increased fairly steadily since 1934, a decline in convictions for indictable offences which started in 1940, has continued in 1941 and 1942.

### 1.—Convictions for All Offences (Juveniles Included), Classified by Indictable and Non-Indictable Offences, Years Ended Sept. 30, 1931-42

NOTE.—Figures for the years 1886 to 1930 will be found at pp. 1050-1051 of the 1939 Year Book.

Year	Indictable Offences							Non-indictable and Minor Offences, Total and Ratios			Grand Total Convictions
	Offences Against—			Other Indictable Offences	Indictable and Major Offences, Total and Ratios						
	The Person	Property with Violence	Property without Violence					No.	No.	P.C. of All Offences	
1931...	4,739	5,288	20,649	6,177	36,853	10.0	355	330,235	90.0	3,183	367,088

## Section 2.—Offences of Adults

The statistics in Table 4 are comparable with those shown for juvenile offenders in Table 18. The separation between adult and juvenile offenders is available only for the years beginning with 1922, but totals of adult offences for the years 1931-37 may be obtained by subtracting those of Table 18 from those of Table 1.

*War-Time Trends.*—A marked decrease in convictions for indictable offences is noted during the first three war years. "Offences against the person", which increased 70·0 p.c. during the three years preceding the War, have shown a 0·2 p.c. decrease since 1939; "offences against property with violence" increased 27·0 p.c. from 1936 to 1939 but decreased 36·2 p.c. during the three war years; while the increase for "offences against property without violence" in the former period was 25·5 p.c. as against a decrease of 31·1 p.c. for the latter.

### 4.—Convictions of Adults for Indictable and Non-Indictable Offences, by Class of Offence, Years Ended Sept. 30, 1938-42

Class of Offence	NUMBERS				
	1938	1939	1940	1941	1942

### Subsection 1.—Convictions of Adults for Indictable Offences

The progress of a community, from a moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However, in the study of such statistics it is important to have comparable figures over a period of years. Table 5, along with the figures published in earlier editions of the Year Book (see headnote to table), provides the necessary background.

It may be stated that during the 42-year period from 1900 to 1942 crimes increased from 5,768 to 39,309 or 582 p.c. The increase in the population during the same period was 117.1 p.c., revealing that the increase in the crime rate was almost five times that of the population.

*War-Time Trends.*—Convictions for indictable offences, which had increased from 36,059 in 1936 to 48,107 in 1939, or by 33.4 p.c. during the three years preceding the outbreak of war, have decreased steadily during the first three war years. The 1942 total of convictions was 39,309, a decrease of 18.3 p.c. since the War started.

### 5.—Convictions of Adults for Indictable Offences, by Provinces, Years Ended Sept. 30, 1931-42

NOTE.—For figures for 1900-20, see p. 1016 of the 1933 Year Book and for 1921-30, p. 908 of the 1942 Year Book.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon	N.W.T.	Canada
1931.....	57	1,184	461	5,737	12,000	3,102	2,716	2,887	3,385	8	5	31,542

1935.....	59	1,002	576	9,354	12,653	2,382	1,976	2,424	3,088	3	14	33,531
1936.....	75	1,147	744	9,497	13,594	2,631	2,194	3,138	3,021	8	10	36,059
1937.....	98	1,081	759	7,781	14,569	2,839	3,083	3,589	3,331	8	10	37,148
1938.....	225	1,269	912	10,277	17,248	3,041	2,555	3,619	4,443	7	3	43,599
1939.....	268	1,635	1,107	10,804	19,804	3,220	3,450	4,087	3,701	7	24	48,107
1940.....	251	1,573	1,131	12,152	17,558	3,353	2,886	4,411	3,392	3	13	46,723
1941.....	207	1,675	1,185	11,514	15,861	2,811	3,106	3,263	2,996	6	22	42,646
1942.....	205	1,646	1,063	10,269	15,070	2,419	2,621	3,193	2,792	5	26	39,309

**Multiple Convictions.**—The total number of convictions for any one year must not be confused with the total number of persons convicted for the same period since an increasing number of persons tried for indictable offences have been convicted for more than one offence at the same trial. The trend of such multiple convictions is of value to students of sociology.

### 6.—Persons Convicted of More than One Crime at the Time of Trial Compared with Persons Convicted of One Crime, Years Ended Sept. 30, 1938-42

Persons Convicted of—	1938	1939	1940	1941	1942
2 offences.....	2,546	2,901	2,652	1,850	1,838

Totals, Convicted of One Crime.....	31,478	33,700	33,879	32,692	29,340
<b>Grand Totals.....</b>	<b>35,442</b>	<b>38,232</b>	<b>37,981</b>	<b>35,771</b>	<b>32,305</b>

**Acquittals in Relation to Convictions.**—In 1941 Nova Scotia, New Brunswick, Saskatchewan and the Territories showed increases as compared with 1940 in the number of convictions for indictable offences. In 1942, the number of convictions was less than in 1941 for each of the provinces but the Territories showed an increase. The percentage of acquittals to convictions for recent years is greatest in Ontario with Nova Scotia or Alberta taking second place. The variation in position of the provinces, however, aside from Ontario, shows fairly wide fluctuation.

**7.—Charges, Convictions, and Percentages of Acquittals of Adults Charged with Indictable Offences, by Provinces, Years Ended Sept. 30, 1940-42**

Province	1940		1941		1942		Percentages of Acquittals		
	Charges	Con- victions	Charges	Con- victions	Charges	Con- victions	1940	1941	1942

British Columbia.....	3,837	3,392	3,340	2,996	3,130	2,792	11.6	11.5	12.1
Yukon and N.W.T.....	24	16	29	28	35	31	33.3	3.6	12.9
<b>Canada.....</b>	<b>53,516</b>	<b>46,723</b>	<b>49,026</b>	<b>42,646</b>	<b>45,283</b>	<b>39,309</b>	<b>12.7</b>	<b>15.0</b>	<b>15.2</b>

**Classes of Indictable Offences and Analyses of Convictions.**—The 1942 convictions were 7.8 p.c. lower than in 1941 when they were 8.7 p.c. below the 1940 figure. Decreases in theft, embezzlement, false pretences, fraud, receiving stolen goods, horse- and cattle-stealing, burglary, robbery, forgery and uttering, and gambling, which are among the crimes providing the greatest percentage of all indictable convictions, were leaders in the decline of indictable crime during the war years. They were also the leaders in the heavy increase in indictable crime during the three years preceding the War. Convictions for theft increased 18.3 p.c. in the three pre-war years and decreased 29.3 p.c. since the War started. Theft comprises nearly one-third of all indictable offences.

**8.—Indictable Offences of Adults, by Classes, Years Ended Sept. 30, 1940-42**

<sup>1</sup> Not reported separately in this year.<sup>2</sup> Notwithstanding the fact that the United Church of Canada was completely organized in 1926, these persons still reported themselves as Methodists.<sup>3</sup> Revised since the publication of the 1942 Year Book.

**Convictions of Females.**—Females convicted of indictable offences numbered 5,894 in 1942, a decrease from the total of 6,217 in 1941. They comprised 15.0 p.c. of all convictions of adults in 1942 as compared with 14.6 p.c. in 1941. In all provinces except Ontario and British Columbia, the percentages of women convicted to total convictions were higher in 1942 than in 1941. Increases, however, were not great in any province.

**11.—Convictions of Females for Indictable Offences, by Provinces, Years Ended Sept. 30, 1938-42**

Province	Numbers of Convictions					Percentages of Females Convicted to Totals Convicted

**Recidivism.**—The number of offenders who relapse into crime after a first conviction has decreased during 1941 and 1942. While the number of first offenders decreased during the first three war years, the percentage of total convictions represented by this class increased slowly. The number of recidivists and the percentage of total convictions they represent have both decreased, though by less than 1 p.c. per year.

**Subsection 2.—Non-Indictable Convictions of Adults**

The following statistics relate to non-indictable offences of adults (persons 16 years of age or over) and disposed of by police magistrates or other justices of the peace, under authority of the Summary Convictions Act. Such convictions during 1942 showed an increase of 6.2 p.c. as compared with 1941. The increase was almost totally accounted for in the Province of Quebec, although Nova Scotia and New Brunswick showed nominal increases. All other provinces showed fewer convictions for 1942 than 1941.

### 13.—Convictions of Adults for Non-Indictable Offences, by Provinces, Years Ended Sept. 30, 1931-42

NOTE.—For figures for 1900-12, see p. 1020 of the 1933 Year Book and for 1913-30, p. 913 of the 1942 Year Book.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon	N.W.T.	Canada

1942..	1,521	10,386	8,170	195,672	285,240	32,209	8,541	14,543	24,905	86	91	581,364

The marked increase in the past 16 years in non-indictable convictions has been due, almost entirely, to breaches of traffic regulations, which have risen from 96,340 in 1927 to 399,957 during 1942 or from 50 p.c. of the total in 1927 to 68.8 p.c. in 1942. Breaches of the radio licence laws have also increased rapidly during the past two years, due, perhaps, to stricter enforcement.

<sup>1</sup> Convictions for operating radio without licence were formerly classed as offences against revenue laws.

**Convictions for Drunkenness.**—The number of convictions for drunkenness in Canada increased by 11.2 p.c. in 1942 as compared with 1941. Maximum figures were attained in the years 1913 and 1914; during the War of 1914-18 there was an appreciable reduction and since then, while figures have fluctuated, they have not approximated the former high levels.

**15.—Convictions for Drunkenness, by Provinces, Years Ended Sept. 30, 1931-42**

NOTE.—For figures for 1900-10, see p. 1021 of the 1933 Year Book and for 1911-30 p. 914 of the 1942 Year Book.

**Offences Against the Liquor Acts.**—Until the War of 1914-18, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the liquor Acts usually represented a breach of the conditions of sale. During the War, prohibition was generally established but in more recent years the Provincial Governments have taken over the sale of liquor through commissions. Eight of the nine provinces now have such liquor commissions, Prince Edward Island being the only province in which prohibition prevails. In 1929, the number of convictions for offences against the liquor Acts reached the highest figure on record, viz., 19,327, but decreased to 16,898 in 1942.

**16.—Convictions for Offences Against the Liquor Acts, by Provinces, Years Ended Sept. 30, 1931-42**

NOTE.—For figures for 1900-20, see p. 1022 of the 1933 Year Book and for 1921-30, p. 915 of the 1942 Year Book.

**Breaches of Traffic Regulations.**—Convictions for breaches of traffic regulations (Table 17), which at the beginning of the century numbered only 185 in all Canada, have, as a result of the growing density and increasing use of motor-vehicles, become the largest element in the non-indictable offences. Such convictions represented, in 1942, 68.8 p.c. of the total non-indictable convictions.

### 17.—Convictions for Breaches of Traffic Regulations by Provinces, Years Ended Sept. 30, 1931-42

NOTE.—For figures for 1900-20, see p. 1023 of the 1933 Year Book and for 1921-30, p. 915 of the 1942 Year Book.

<sup>1</sup> Since 1937 convictions for driving a car while drunk have been classed as indictable offences. In 1938 and later years dangerous and reckless driving was so classed and since the War the breach of Defence of Canada Regulations and leaving the scene of an accident have also been so classed. <sup>2</sup> Includes one in the Northwest Territories. No convictions were reported for the Northwest Territories for other years.

For the year 1942, Ontario, which had 47 p.c. of the registrations of motor-vehicles in Canada (see p. 597), had 58 p.c. of the total convictions; Quebec in the same year had 15 p.c. of the motor-vehicles and 28 p.c. of the convictions; and Manitoba 6 p.c. of the motor-vehicles and 6 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above three provinces contain large centres of population, while in provinces with lower degrees of urbanization such as the Maritimes, Saskatchewan and Alberta, convictions were low in proportion to the number of motor-vehicles registered.

**Sex of Offenders.**—Between 1926 and 1942 the numbers of females convicted of non-indictable offences increased by 163.1 p.c. In proportion to total offenders, however, they showed a very small decrease, only 4.7 p.c. of the offenders convicted for non-indictable offences in 1942 being females, as against 6.1 p.c. in 1926. By sexes, the non-indictable convictions appear as follows: 1926—males 159,528, females 10,385; 1927—males 182,392, females 10,848; 1928—males 232,554, females 13,209; 1929—males 274,977, females 15,066; 1930—males 292,557, females 16,202; 1931—males 312,111, females 15,667; 1932—males 281,318, females 16,591; 1933—males 275,229, females 17,444; 1934—males 311,542, females 17,202; 1935—males 339,494, females 23,148; 1936—males 355,772, females 21,934; 1937—males 395,699, females 24,513; 1938—males 389,648, females 25,016; 1939—males 405,993, females 22,615; 1940—males 431,373, females 24,736; 1941—males 520,243, females 27,313; 1942—males 554,042, females 27,322.

### Section 3.—Juvenile Delinquency

The terms indictable and non-indictable are applied only to offences of adults, similar offences committed by juveniles (persons under 16 years of age) being termed "major" offences and "minor" offences, respectively.

Table 18 shows the numbers of convictions of juveniles for all offences, classified as major and minor offences, for the judicial years 1931-42. No separation by class of offence is available for earlier years. The rates per 100,000 population in this

table apply to the total population, estimates of population by age not being generally available for intercensal years. Between 1927 and 1938, there has been a definite upward trend in the percentage of major offences to all offences.

### 18.—Convictions of Juveniles for Major and Minor Offences, by Class of Offence, Years Ended Sept. 30, 1931-42

NOTE.—In this table "Property Without Violence" includes Classes III and IV, and "Other Major Offences" includes Classes V and VI of Table 8, p. 981. For figures for 1922-30, see p. 916 of the 1942 Year Book.

<sup>1</sup> None reported.

While, officially, juveniles are persons under 16 years of age, in response to increased public interest in offences committed by young persons, the following table has been compiled, in which the convictions for indictable offences of persons aged 16 and under 21 have been added to the figures of juveniles found guilty of major offences. The rates per 100,000 population are the proportions of the offences committed by persons in any one age group, the figures of population being taken from the decennial censuses, except in 1939, 1940 and 1942 (where official estimates are used), the population in each age group is the officially recorded population for the Census.

It will be observed that the age group 16 to under 21 years shows a much higher crime rate than the juvenile group (7 to under 16 years) or the total young persons group (7 to under 21 years). After increasing steadily in recent years, the rate for this group dropped from 950 per 100,000 population in 1939 to 773 in 1942.

**20.—Convictions of Persons 7-21 Years of Age for Major or Indictable Offences, Years Ended Sept. 30, 1911, 1921, 1931 and 1939-42**

<sup>1</sup> Revised since the publication of the 1942 Year Book.

**Major Offences.**—From Table 21 it will be observed that theft and receiving stolen goods; breaking, entering and theft; and other wilful damage to property account for the great bulk of the offences. In 1942, 94·1 p.c. of the major offences were in these classes.

**War-Time Trends.**—Major offences for juveniles, which had increased only 1·0 p.c. during the three latest pre-war years increased by 37·9 p.c. during the first three war years, 1939-42. The increase was chiefly in convictions for theft, burglary and common assault. Convictions for theft, which had decreased 9·1 p.c. from 1936 to 1939, have shown an increase of 30·6 p.c. from 1939 to 1942. Thefts of bicycles and automobiles have also shown a much faster rate of increase in the same comparison. The rate of increase for burglary, which had been 17·0 p.c. in the period 1936-39, advanced to 25·9 p.c. during 1939-42. Convictions for common assault, which had declined 35·3 p.c. from 1936 to 1939 have shown a 62·1 p.c. increase for the first three years of war.

<sup>1</sup> Revised since the publication of the 1942 Year Book.

**Recidivism.**—The number of juvenile delinquents who have previously appeared before a court has generally increased although the fluctuations between individual years are rather wide over the period for which figures are available. As shown in Table 22, approximately 19·4 p.c. of the juveniles convicted of major offences in 1942 had previously been found guilty, as compared with less than one-fourth of those convicted of similar offences in 1929 (23·3 p.c.).

**22.—Juvenile Offenders Convicted of Major Offences and Number of Times Convicted, Years Ended Sept. 30, 1931-42**

**Minor Offences.**—From Table 23 it will be seen that there was an increase of 18 p.c. in the number of convictions for minor offences in 1942 as compared with 1941.

**23.—Convictions of Juveniles for Minor Offences, by Type of Offence, Years Ended Sept. 30, 1938-42**

*War-Time Trends.*—An increase of 15·8 p.c. shown in convictions of juveniles for minor offences during the three years preceding the War compares with an increase of 86·4 p.c. for the first three years of war. Breaches of municipal by-laws accounted for a large part of this war-time increase, mainly of bicycle regulations which increased 543·1 p.c. since the start of the War as compared with a 37·8 p.c. increase during the three pre-war years, and this, in turn, is the result of the increased use of bicycles to ease the war-time traffic situation. But incorrigibility, truancy, vagrancy and “wandering away from home” also showed much higher percentages of increase during the war period. Reasons for these must be sought deeper, viz., in the general effects of war on the conduct of juveniles as a whole.

### Section 4.—Municipal Police Statistics

Police statistics were collected from 159 cities and towns of 4,000 or over population in 1942. The aggregate population of this group of cities and towns is 4,934,039. Total number of policemen in those towns was 5,932 or one for every 832 of population.

A total of 490,431 offences were reported to the police. Arrests numbered 122,677 and 276,907 summons were issued. There was 380,031 prosecutions and 328,462 convictions.

Automobiles stolen numbered 7,594 with 7,663 recovered. Bicycles stolen numbered 16,959 with 12,795 recovered. The value of other goods reported to the police as stolen was \$2,715,908. Value of stolen goods recovered totalled \$1,479,504.

Automobile accidents numbered 45,473 as the result of which 480 persons were killed and 15,276 injured. Other accidents caused 954 deaths and 7,423 injuries.

The number of doors found unlocked by the police was 39,344; 42,795 persons were given shelter in police stations and 8,817 stray children were returned to their homes.

## Section 5.—Penitentiary Statistics\*

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St. Vincent de Paul, Que., while the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster, B.C.; and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1942, the average daily population of these institutions was 3,438 and the total net cash outlay for the year was \$2,832,478 or \$2.18 per convict per diem, compared with 3,685 average daily population and \$2,641,192 total net cash outlay or \$1.98 per convict per diem for the year 1941.

The special penitentiary for Doukhobors on Piers Island, B.C., which was administered under the warden of the penitentiary at New Westminster, was in operation from 1932 to Mar. 28, 1935, when the 39 remaining inmates were transferred to New Westminster. The statistics of this special penal colony are included with those of the regular penitentiaries in the following tables, and the reader is referred to p. 1035 of the 1936 Year Book for details of the Piers Island colony, given by sex, age, race and conjugal condition.

Female convicts committed to penitentiaries in the different provinces are sent to the penitentiary at Kingston, Ont., where special quarters and staff are maintained for their detention and supervision. Female convicts in custody on Mar. 31, 1942, numbered 39 compared with 46 in 1941 and 33 in 1940.

**Movement of Population of Penal Institutions.**—Penal institutions may be classified under three headings: (1) penitentiaries, with slow turnover, since prisoners have long sentences; (2) reformatories and training schools, also with rather slow turnover; and (3) common gaols, where the turnover is extremely rapid. If the average population for the year be taken as the average of the figures for inmates at the beginning and at the end of the year, and the number discharged be the turnover, the percentage turnover in 1942 was: in penitentiaries, 46 p.c.; in reformatories and training schools, 194 p.c.; in gaols, no less than 1,454 p.c. In dealing with these figures it must be born in mind that the common gaol population changes from day to day, and is partly made up of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

\* This section has been revised in co-operation with the Superintendent of Penitentiaries, Department of Justice.

### 25.—Population of Penal Institutions, 1940-42

NOTE.—Penitentiary statistics are for the calendar year; for other institutions, the figures are for the years ended Sept. 30.

Year and Type of Institution	In Custody, Beginning of Year	Admitted during Year	Discharged during Year	In Custody, End of Year

Gaols.....	3,816	55,040	55,500	3,356
<b>Totals, 1942.....</b>	<b>11,773</b>	<b>64,168</b>	<b>65,480</b>	<b>10,451</b>

Tables 26 to 28 give the more important penitentiary statistics as reported to the Bureau of Statistics. The number of convicts in penitentiaries was 1,865 in 1910, rose to 2,118 in 1916 and declined to 1,468 in 1918. After demobilization and the depression of 1921, the number of convicts rose to 2,640 in 1922, declined to 2,225 in 1924 and then increased to 4,164 in 1932. The increase was particularly rapid after 1929, amounting to 1,395 or 44 p.c. in three years. The number of convicts in 1936, at 3,098, was lower than in any year since 1929, but in 1937 there was an increase of 5.4 p.c. with further increases of 9.7 p.c. in 1938 and 6.2 p.c. in 1939. However, from 1939 to 1943 there was a decrease of 22 p.c. below the previous year. The number of paroles (ticket-of-leave), as shown in Table 26, was 264 in 1943.

<b>Totals, Discharged.....</b>	<b>1,912</b>	<b>1,866</b>	<b>1,709</b>	<b>1,697</b>	<b>1,562</b>
<b>In Custody, Ends of Years.....</b>	<b>3,803</b>	<b>3,772</b>	<b>3,688</b>	<b>3,232</b>	<b>2,969</b>

Table 27 shows the ages of convicts by groups. In 1943, of the total of 2,969, 15 p.c. were under 21 years of age and 39 p.c. between 21 and 30 years of age; thus 54 p.c. were 30 years of age or less. In 1914, there were 2,003 convicts of whom 9.3 p.c. were under 20 and 44.4 p.c. between 20 and 30, a total of 53.7 p.c. under 30. In 1923, there were 2,486 convicts and 11.3 p.c. were under 20, 46.6 p.c. between 20 and 30, or 57.9 p.c. under 30 years of age. Detailed statistics of the place of birth, conjugal state, sex and religion of convicts are presented in Table 28.

27.—Ages of Convicts in Penitentiaries, as at Mar. 31, 1936-43

Age Group	1936	1937	1938	1939 <sup>1</sup>	1940 <sup>1</sup>	1941	1942	1943

## PART I.—MISCELLANEOUS PERMANENT ADMINISTRATION

### Section 1.—Public Lands

In Table 1, summarizing the land area of Canada, items 3, 4 and 5 are obtained from Dominion Government sources and items 1, 2 and 7 from Provincial Government sources. In the majority of cases the area of provincial lands (item 6), as calculated by balancing the figures, agrees with the area as estimated by the Provincial Departments concerned. Thus, any differences reported from year to year in the area of lands alienated or in process of alienation are compensated for by the adjustment of lands still remaining under the Crown in the right of the provinces concerned.

#### 1.—Classification of Lands in Canada, by Tenure (*circa*) 1943

NOTE.—The land area of Canada classified by surface resources is shown at pp. 10-11.

Tenure	P.E.I.	N.S.	N.B.	Que.	Ont.
	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles

<sup>1</sup> Includes lands in process of alienation.<sup>2</sup> Less than one square mile.<sup>3</sup> See footnotes to

constituent items.

<sup>4</sup> For provinces indicated only.<sup>5</sup> Includes 752,282 square miles set aside

by Order in Council as native game preserves in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is forbidden, and as reserves for reindeer grazing, but which are not regarded as national parks.

<sup>6</sup> Includes Wood Buffalo Park (which, although reserved by the Dominion, is not administered as a national park) and the Tar Sands Reserve (2,068 acres).<sup>7</sup> In-

cludes that portion of the Wood Buffalo Park in N.W.T.

## Subsection 1.—Dominion Public Lands\*

The public lands under the administration of the Dominion Government comprise lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait and Bay and James Bay; lands in Yukon Territory; National Parks and historic sites (see pp. 11-16); Indian reserves (see p. 998); Ordnance and Admiralty lands, and, in general, all lands held by the several departments of the Dominion Government for various purposes connected with Dominion administration including the Tar Sands Reservation comprising 4 areas, amounting in all to 2,068 acres, in the Fort McMurray District of Alberta. The lands and other natural resources lying within the boundaries of the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia that had formerly been administered by the Dominion Government, were transferred in 1930 to the administration of the provinces concerned. (See p. 1019 of the 1931 Year Book.)

The great bulk of the land areas under Dominion administration are those of Yukon and the Northwest Territories, amounting to about 936,680,000 acres or 42 p.c. of the land surface of Canada. In general, the southern border of both Yukon and the Northwest Territories is 60° N. latitude. In Europe, the cities of Oslo, Stockholm and Leningrad are near this line; about three-fourths of Norway, two-thirds of Sweden, Finland and a large portion of Russia are north of it. This northern part of the national domain is under the Administration of the Lands, Parks and Forests Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order throughout Yukon and the Northwest Territories.

**The Northwest Territories.**—At pp. 946-948 of the 1941 Year Book an account of the administration of the Northwest Territories is given. The following paragraphs bring that review up to date.

Important developments in 1942 and 1943 included the drilling program carried out at the Norman oil-field in the lower Mackenzie Basin as part of the Canol Project; the reopening of the pitchblende-silver property of the Eldorado Mining

\* Prepared under the direction of R. A. Gibson, Deputy Commissioner, Administration of the Northwest Territories, Ottawa.

and Refining Limited, at Great Bear Lake; and the improvement and extension of aeroplane landing fields in the Mackenzie District. In the latter part of 1943 there was a noticeable decline in gold-mining operations as a result of war conditions, but exploratory work and prospecting, particularly for strategic war minerals, were continued.

The Canol Project, which is more fully described at p. 316, involves an extensive drilling program to determine the productive capacity of the Norman oil-field; the construction of a pipeline from Norman Wells, N.W.T., to Whitehorse, Y.T.; and the erection of an oil refinery at Whitehorse. By Jan. 1, 1944, a total of 32 wells had been drilled under the Canol Project and, of these, 25 yielded oil in commercial quantity. The potential production of these new wells is estimated to be in excess of the capacity of the pipeline, which is rated at 3,000 barrels daily. The welding of the pipeline was completed early in 1944. Production of oil and gasoline at Norman Wells for civilian requirements and military use in the Territories in 1943 showed a marked increase over previous years.

The mining property of Eldorado Mining and Refining Limited, which was closed temporarily in 1940 owing to the loss of European markets, was reopened in August, 1942. War-time demands for concentrates, from which radium and uranium salts are extracted, have kept the mill at Great Bear Lake working at full capacity. These concentrates are shipped to the company's refinery at Port Hope, Ont., for treatment.

As a necessary means for the more effective prosecution of the War, the Government of Canada on Jan. 27, 1944, acquired all properties and assets of Eldorado Mining and Refining Limited by expropriating all shares of the company. Operations will be carried on by a Crown company known as Eldorado Mining and Refining.

Labour shortages brought about by war conditions and the transfer of workers to other parts of the country resulted in a decline in mining development and gold production in the Yellowknife area. In 1941 there were six gold mines in production. Two mines suspended operations in 1942, and by the end of 1943 only one property, Negus Mines, Limited, remained in production. The value of gold produced in the Territories in 1942 was \$3,826,669, a new record, and the value of silver produced for the same period was \$9,500. In 1943, the value of gold production was approximately \$2,300,000, and that of silver \$6,300. The total value of gold produced in the Northwest Territories since the commencement of operations in 1938 to the end of 1943 was approximately \$13,100,000. The value of silver produced during the same period was approximately \$31,000.

Aerial transportation is a very important factor in the commercial life of northern Canada, and has greatly assisted in the opening up of new mining areas. The construction of landing fields at many of the larger settlements in the Mackenzie River Basin now permits the operation of wheel-equipped aircraft the year round, and thus affords a rapid and convenient service to the Mackenzie District for passengers, express and postal matter.

The demands made on companies engaged in water transportation in the Territories were exceedingly heavy in the period under review, when the freight tonnage carried to meet the requirements of civilian enterprise and defence projects exceeded all previous records.

Fur and game continued to be plentiful, and fur prices remained at high levels. The Dominion Government reindeer experiment in the northern Mackenzie District continued to make progress. A detailed description of this enterprise will be found at pp. 17-23.

**Yukon Territory.**—An account of the administration of Yukon Territory is given at p. 948 of the 1941 Year Book. The following paragraphs bring that review up to date.

The initiation of joint defence projects in northwestern Canada in 1942, including the Alaska Highway, the Canol Project, and related undertakings, ushered in a period of great activity in Yukon Territory. Construction of the Alaska Highway from Dawson Creek, B.C., to Fairbanks, Alaska, entailed the building of approximately 570 miles of road in Yukon Territory, in addition to 689 miles in British Columbia and 315 in Alaska, or a total of 1,574 miles. In addition, the construction of about 200 miles of branch roads connecting the Alaska Highway with airports along the Northwest Staging Route was undertaken.

During 1943, the road was developed from pioneer stage to a condition meeting the standard requirements of a military highway and is now capable of handling a flow of heavy vehicular traffic from Dawson Creek to Fairbanks with little interruption. A joint Canada-United States Traffic Control Board was set up in 1943 to deal with applications and issue permits for travel on the Alaska Highway. Supplementing the highway project are pipelines from Skagway, Alaska, to Whitehorse, Y.T.; from Carcross, Y.T. to Watson Lake, Y.T.; and from Whitehorse to Fairbanks, Alaska. Flight strips have been constructed along the route of the Alaska Highway by United States authorities to facilitate contact flying and for emergency landings between airports.

Mining continued to be the principal industry of Yukon Territory, and up to the end of 1942 the value of mineral production exceeded \$237,000,000. Of this amount, gold accounted for \$208,000,000, and silver, \$21,000,000. Practically all gold is recovered from placer-mining operations, and production in 1942 was valued at approximately \$3,200,000. Labour shortages in 1943 resulted in reduced operations, and the value of gold production for that year was approximately \$1,600,000. In the Mayo district, important deposits of scheelite, the tungsten-bearing ore, were worked, and some silver-lead ore was also produced by lode mining.

Construction of the Alaska Highway through what has hitherto been almost inaccessible country attracted the attention of mining companies to the southern Yukon, and the area bordering the highway between Teslin Lake and Watson Lake was examined by a number of prospecting parties in 1943. Applications for grants for mineral locations in other parts of the Territory also were received.

### Subsection 2.—Provincial Public Lands

In the Maritime Provinces and in Quebec, Ontario and British Columbia (except the Railway Belt and the Peace River Block) the public lands have been administered by the Provincial Governments since Confederation. Since the transfer by the Dominion Government of the natural resources of the Prairie Provinces and of the sections of British Columbia mentioned (see also p. 1019 of the 1931 Year Book), public lands in all provinces have been under provincial administration. In Prince Edward Island, all the land is alienated and there are no provincial public lands.

Information regarding provincial public lands may be obtained from the following officials of the respective provinces: Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and

Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

## Section 2.—Department of Public Works

The constructing department of the Dominion Government, since before Confederation, has been known as the Department of Public Works. The work of the Department is divided into three principal branches, viz., the Engineering Branch, the Architect's Branch and the Telegraph Branch. An account of the work of each of these branches is given at pp. 949-950 of the 1941 Year Book, and a description of the five dry docks constructed by the Department is given at p. 618 of the 1942 edition.

## Section 3.—The Indians and Eskimos of Canada

### Subsection 1.—The Indians of Canada

The Indians of Canada, whose affairs are administered by the Indian Affairs Branch, Department of Mines and Resources, number 118,378 (according to a departmental census taken in 1939). The popular notion that the race is disappearing is not in accordance with fact. Before the advent of the European, the number of the Indians was undoubtedly larger, but little reliable information as to the aboriginal population, during either the French or the early British regimes, is available. The best estimate, however, of the aboriginal or Indian population of what is now Canada was slightly in excess of 200,000 or about double the present figure. During this twentieth century the trend has been upward with a gradual but fairly steady increase.

**Administration.\***—Reserves have been set aside for the various bands of Indians throughout the Dominion and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department, as administrator of the affairs of the Indians, include the control of Indian education and health, the development of agriculture and other pursuits among them, the administration of their lands, community funds, estates and the general supervision of their welfare.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are 99 in all. The number of bands contained in an agency varies from one to more than 30. The staff of an agency usually includes, in addition to the agent, various officials such as medical officer, clerk, farm instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised from headquarters at Ottawa and, in the field, by the Department's inspectors, each inspector having charge of a certain

\* Revised by T. R. L. MacInnes, Secretary, Indian Affairs Branch, Department of Mines and Resources. For an outline of the early administration, see p. 937 of the 1932 Year Book.

number of agencies; in British Columbia the supervision of the Indian agencies is under the direction of the Indian Commissioner for British Columbia. Expenditures for the assistance of destitute Indians on reserves are made by the Dominion Government, either from public funds or from tribal funds of the Indians.

The Government has undertaken a number of special projects for the various sections of the Indian population in accordance with their needs, including fur development enterprises in selected areas; the promotion of Indian handicraft; and planned agricultural operations.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised he ceases to be an Indian under the law and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection provided by the Indian Act, so that it is necessary to guard against premature enfranchisement.

**Treaties.**—In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In western Ontario, the Prairie Provinces and the Territories the situation has been different. There, the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized by the Government. Accordingly, treaties were entered into with the Indians whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession the Crown agreed to: set aside adequate reserves; make cash grants; provide per capita annuities; give assistance in agriculture, stock-raising, hunting, trapping, etc., as particular circumstances might require; provide education for the Indian children; and otherwise safeguard the Indians' interests. These treaties were made from time to time as occasion arose and as new territories were opened up. No treaty has been made with the Indians of British Columbia, except in the Peace River Block, but their welfare has received no less attention from the Government on that account.

**Government Expenditure.**—At Mar. 31, 1943, the balance of the Indian Trust Fund, which a year earlier had amounted to \$14,641,214, had increased to \$15,027,772. The amounts expended from the Consolidated Revenue Fund were as follows: voted by Parliament for the purposes of the Department, \$4,980,560, annuities by statute, \$261,741; and special supplementary, \$93,814.

**Population.**—The Indian Affairs Branch takes a quinquennial census of the Indians under its control. The results of the latest of these censuses, taken in 1939, show a total of 118,378 Indians as compared with 112,510 in 1934 and 108,012 in 1929, an increase of 9.9 p.c. in ten years. Details are given in the Annual Report of the Department of Mines and Resources for 1940. The figures given in Table 2 are those of the eight Dominion decennial censuses since Confederation, and include some thousands of persons of Indian racial origin who are not on the reserves but are living as ordinary citizens of Canada.

## 2.—Indian Population of Canada at the Decennial Censuses of 1871-1941

Province or Territory	1871 <sup>1</sup>	1881 <sup>1</sup>	1891 <sup>2</sup>	1901	1911	1921	1931	1941

<b>Canada.....</b>	<b>102,358</b>	<b>108,547</b>	<b>120,638</b>	<b>127,941<sup>4</sup></b>	<b>105,492</b>	<b>110,596</b>	<b>122,920</b>	<b>118,316</b>

<sup>1</sup> Census figures in the organized provinces and estimates for the rest of Canada. <sup>2</sup> Racial origin not taken in 1891; the figures have been taken from the report of the Department of Indian Affairs of that year.

<sup>3</sup> The decrease in the Indian population of the Northwest Territories is due to the extension of the boundaries of Quebec, Ontario and Manitoba in 1912. This also accounts for the increase in the 1921 Indian population of these provinces. <sup>4</sup> Includes 34,481 'half-breeds'.

**Indian Education.**—The educational work of the Department is now very extensive. In the fiscal year 1942-43, a total of 352 Indian schools were in operation, including 77 residential schools for Indians with an enrolment of 8,830 and 269 day schools for Indians with an enrolment of 7,938 Indian pupils, also 6 combined public and Indian schools, with 108 Indian pupils enrolled. The total enrolment of Indian pupils at school has increased from 12,799 in 1915-16 to 16,876 in 1942-43 and the average attendance from 8,080 to 13,441 (63.1 p.c. to 79.64 p.c. of the enrolment). Continuation and high-school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the fiscal year 1942-43, was \$1,850,450.

## 3.—Enrolment and Average Attendance at Indian Schools, Fiscal Years 1936-43

NOTE.—Figures for the years 1916-29 will be found at p. 1063 of the 1940 Year Book, and for 1930-35 at p. 929 of the 1942 edition.

Year	Residential Schools		Day Schools		All Schools		
	Enrolment	Average Attendance	Enrolment	Average Attendance	Enrolment	Attendance	
						Number	P.C. of Enrolment
1936.....	8,906	8,061	9,127	5,788	18,033	13,849	76.8

<sup>1</sup> Includes income received from timber and mining dues, from annuities earned as interest on Indian trust funds, and from money received from land rentals.

## Subsection 2.—The Eskimos of Canada\*

The Eskimos of Canada are found principally on the northern and Hudson Bay coasts of the mainland and on islands in the Arctic Archipelago and in Hudson Bay, although in the Baker Lake-Chesterfield Inlet area on the west side of Hudson Bay there are bands of Eskimos who are essentially an inland people, and who

\* Prepared under the direction of R. A. Gibson, Director, Lands, Parks and Forests Branch, Department of Mines and Resources.

subsist chiefly on caribou. The diet of the coast Eskimos is largely marine mammals and fish, varied at times by caribou obtained from the interior during the seasonal migrations of these animals. The skins of the caribou are used for winter clothing.

The Decennial Census of Canada in 1941 established the Eskimo population at 7,205, of which 5,404 were located in the Northwest Territories and 1,778 in northern Quebec.

The administrative care of Eskimos outside of the organized provinces devolves upon the Department of Mines and Resources which, by regulative measures—including the setting aside of game preserves where only natives may hunt, and the establishment of reindeer herds—conserves the natural resources necessary to their subsistence. An account of the Dominion Government's reindeer experiment, which was undertaken primarily to improve the economic condition of the native Eskimos, is given at pp. 17-23 of this edition. Contact with the Eskimos is maintained through permanent stations, at a number of which medical officers are located, in the eastern, central, and western Arctic; by patrols of the Royal Canadian Mounted Police; and by means of the annual Canadian Eastern Arctic Patrol by steamship.

#### Section 4.—Pensions

The information on the Canadian Pensions Commission, the Veterans' Bureau and War Veterans' Allowance Board and Returned Soldiers' Insurance, which formerly appeared under this heading, has been transferred in this edition of the Year Book to Chapter XXI on Post-War Reconstruction and the Rehabilitation of Ex-Service Personnel, pp. 755-775.

#### Section 5.—Soldier Settlement of Canada

Information on this subject will now be found in Chapter XXI on Post-War Reconstruction and the Rehabilitation of Ex-Service Personnel, at pp. 770-771.

#### Section 6.—Department of the Secretary of State\*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the Privy Seal, as well as being the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Naturalization Act, the Patent Act, the Trade Unions Act, the Ticket of Leave Act, the Unfair Competition Act (1932), the Bankruptcy Act, and with the collection and tabling of parliamentary returns. Other Acts and Regulations administered by the Secretary of State as a result of the declaration of war are: the Patents, Designs, Copyright and Trade Marks Emergency Order (1939), and the Revised Regulations Respecting Trading with the Enemy (1943).

\* Revised by E. H. Coleman, C.M.G., K.C., LL.D., Under Secretary of State, Department of the Secretary of State.

The Secretary of State deals with the organization and administration of the Office of the Custodian of Enemy Property (see the External Trade chapter of this volume, p. 441). Statistics regarding patents and copyrights appear in Chapter XVII at pp. 545-548.

**Charters of Incorporation.**—Statistics of companies incorporated under the Companies Act are given in Table 6.

#### 6.—Numbers and Capitalizations of Companies Incorporated Under the Companies Act and Amending Acts, Fiscal Years 1936-43

NOTE.—Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book and for 1926-35 at p. 934 of the 1942 edition.

Year	New Companies		Old Companies with—				Gross Increase in Capitalization <sup>1</sup>	Net Increase in Capitalization <sup>1</sup>
			Increased Capitalization		Decreased Capitalization			
	No.	Capitalization <sup>1</sup>	No.	Amount <sup>1</sup>	No.	Amount <sup>1</sup>

1942.....	211	50,606,141	40	15,760,300	39	54,964,907	66,366,441	11,401,534
1943.....	205	51,630,000	35	56,198,739	29	7,728,436	107,828,739	100,100,303

<sup>1</sup> Includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

**Naturalizations.**—The naturalizations effected under the Naturalization Act (R.S.C., 1906, c. 77) for the calendar years 1908-17, inclusive, are given at p. 594 of the Year Book for 1919. Since Jan. 1, 1918, the only method of obtaining naturalization has been under what is known as the "Imperial" Naturalization Act, which came into force on Jan. 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction by which persons of alien enemy birth were ineligible to receive certificates of naturalization for a period of 10 years after the termination of the War was removed. All these Acts have been consolidated in R.S.C. 1927, c. 138. At the present time any alien, regardless of his nationality, may apply for naturalization, but, according to Sect. 4, Part II of the Act, the granting of a certificate of naturalization to the applicant is left entirely to the discretion of the Minister, who may, without assigning any reason, give or withhold the certificate as he thinks most conducive to the public good. Since Jan. 15, 1932, female British subjects, marrying aliens, retain British nationality, unless they, by marriage, acquire their husbands' nationalities, and the wives of aliens no longer become British subjects automatically through their husbands' naturalization. They must apply to the Secretary of State.

By Order in Council under the War Measures Act (R.S.C. 1927, c. 206) dated July 9, 1942, (5842) as amended by Order in Council dated Sept. 23, 1942 (P.C. 8499), effective Jan. 1, 1943, all aliens who are required to apply for naturalization

by filing their applications through the courts must first file Declarations of Intention. They are not qualified to file applications for naturalization under Sect. 4 of the Naturalization Act until one year after the date of filing the Declarations of Intention.

By the terms of Para. I of the Regulations laid down in Order in Council P.C. 5842 of July 9, 1942, the Secretary of State may grant a certificate of naturalization to any alien serving outside Canada with the Naval, Military or Air Forces of Canada who has satisfied the Secretary of State, by the filing of such documents as may be prescribed by the Secretary of State and the Minister of National Defence, that he is a fit and proper person to be naturalized in Canada as a British subject. No fee shall be payable on such certificate of naturalization.

Table 7 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1933 to 1942. The total numbers of persons naturalized during the same years, including (except as stated above) the wives and minor children of those to whom naturalization certificates were issued, are shown in Table 8.

## Section 7.—Royal Canadian Mounted Police

The Royal Canadian Mounted Police is a constabulary maintained by the Dominion Government. It was organized in 1873, and was known as the North West Mounted Police, whose duties were confined to what was then known as the Northwest Territories. In 1904, its name was changed to Royal North West Mounted Police.

In 1905, when Alberta and Saskatchewan were constituted provinces, an arrangement was made whereby the Force continued to discharge its duties as formerly, each province making a contribution towards defraying the cost. This was continued until 1917. Soon after the close of the First World War an extension of governmental activities made it obvious that the enforcement of Dominion Statutes was assuming increasing proportions, and that it would soon be necessary to have a police force responsible therefor. In 1918, to the Royal North West Mounted Police was assigned the duty of the enforcement of Dominion legislation for the whole of Western Canada, west of Port Arthur and Fort William, and in 1920 for the whole of Canada.

In 1920, the name of the Force was changed to the Royal Canadian Mounted Police, and the former Dominion Police with headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and the Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police.

At the present time, the Royal Canadian Mounted Police is responsible throughout Canada for the enforcement of the laws against smuggling by land, sea and air; it enforces the provisions of the Excise Act and the Migratory Birds Convention Act; is responsible for the suppression of the traffic in narcotic drugs; assists the Mines and Resources, Fisheries and numerous other Dominion Departments in executing the provisions of their respective Acts, and in some cases in administrative duties; is responsible for the protection of government buildings and dockyards; is the sole police force operating in Yukon Territory and the Northwest Territories; and performs a variety of services in all provinces and both Territories for the Dominion Government.

Under the Royal Canadian Mounted Police Act, any province may enter into an agreement with the Dominion Government for the services of the Royal Canadian Mounted Police, to enforce provincial laws and the Criminal Code, upon payment for its services, and at the present time such agreements are in force with the provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta.

The Force is controlled and administered by a Minister of the Crown (at present, the Minister of Justice) and may be employed anywhere in Canada. From a Force of 300 in 1873, it had a strength on Mar. 31, 1943, of 4,928, consisting of 98 officers, commissioned by the Crown, 2,859 non-commissioned officers and constables, 108 ordinary special constables, 1,845 special constable guards and 18 security service (not including Police personnel). In 1937 a "Reserve" strength of 300 men was authorized by Parliament, and at the present time, these are principally centred in such cities as Toronto and Winnipeg.

The Force is organized into 13 Divisions of varying strength distributed over the entire country, and its means of transport consist of 115 saddle horses, 779 motor-vehicles and 283 sleigh dogs.

The term of engagement is five years for recruits, with re-enlistment for a period not exceeding five years, but on account of the war situation there are not very many men being engaged. The training course which is of six months' duration, or longer, consists of drill, physical training—including instruction in wrestling, boxing and jiu-jitsu—and police duties both Dominion and Provincial. The principal training centres are at Regina, Sask., and at Rockcliffe, Ont., at each of which there is an up-to-date scientific laboratory.

The duties of the Force have increased tremendously since the outbreak of the present war and the Commissioner of the Royal Canadian Mounted Police is Registrar General of Enemy Aliens in Canada. The guarding of vulnerable points throughout the Dominion, apart from military property, rests solely upon the Royal Canadian Mounted Police. The Force has furnished one Provost Company consisting of approximately 185 men to the Canadian Active Army overseas.

## Section 8.—The Civil Service of Canada

**Organization.\***—An outline of the development of the Civil Service and the organization of the Civil Service Commission is given at pp. 960-961 of the 1941 Year Book.

Since the outbreak of war, many new departments and branches of Government have been formed which, being set up under the War Measures Act, are not automatically governed by the provisions of the Civil Service Act. Nevertheless, an Order in Council was passed on Apr. 19, 1940, providing that "the authority vested in the Governor in Council under the War Measures Act to make appointments and otherwise deal with personnel shall, unless the Treasury Board otherwise directs, be exercised subject to the approval of the Treasury Board and after investigation of need and rates of pay by the Civil Service Commission". The Order further provides that, unless the Treasury Board otherwise directs, "every appointment shall be made by the Civil Service Commission after such tests of qualifications as the Commission considers practicable and in the public interest". Even where the appointment is made by the Governor in Council, the Civil Service Commission is consulted as to the need for the position and appropriate rate of compensation. During the War practically all appointments are being made on a temporary basis and the permanent organization of the departments remains unchanged.

**Civil Service Statistics.†**—Since April, 1924, a monthly return of personnel and salaries has been made by each Department to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years back to 1912.

From 1914 to 1920, the number of employees increased very rapidly, as a result of the extension of the functions of government and of the imposition of new taxes, which necessitated additional officials as collectors. New services, such as the Department of Pensions and National Health and the Soldier Settlement Board were also created. In January, 1920, 47,133 persons were employed; this number was the highest reached prior to January, 1940, when employees numbered 49,700. In January, 1943, employees numbered 101,785. The increase of 52,085 in 1943 was due to the extension of the war-time activities of the permanent Departments such as Finance, Labour and Trade and Commerce, as well as the growth of the temporary Departments of Munitions and Supply and National War Services. In March, 1943, 12,622 persons were employed in the Post Office Department performing services of an industrial rather than of a governmental type, and receiving their salaries out of payments made by the public for services immediately rendered rather than out of taxation.

---

\*Revised by Miss E. Saunders, Secretary, Civil Service Commission, Ottawa.

† Revised in the Finance Statistics Branch, Dominion Bureau of Statistics, Ottawa.

### 9.—Civil Service Employees (Permanent and Temporary), with Total Salaries, January, 1925-43

NOTE.—These figures do not include persons in the "non-enumerated classes" whose numbers cannot be supplied monthly. Moreover, the figures shown below are not comparable with those for earlier years shown at p. 1100 of the 1939 Year Book because various classes of employees (part-time, seasonal, etc.) formerly omitted are now included.

Year	Employees	Salaries	Bonuses	Salaries and Bonuses
	No.	\$	\$	\$
1925.....	38,645	4,473,470	166,461	4,639,931

### **Section 9.—The Tariff Board**

The Tariff Board was constituted by Act of Parliament in 1931 (c. 55, 21-22 Geo. V). A description of the duties of the Board appears at pp. 965-966 of the 1941 Year Book. During war years the staff has been almost completely engaged in the work of the Oils and Fats Administration of the Wartime Prices and Trade Board.

### **Section 10.—Other Miscellaneous Administration**

Certain phases of Dominion Government activity, such as the operations of the International Joint Commission and certain specialized activities of the Department of Mines and Resources, were treated in the 1930 edition of the Year Book, as follows:—

- International Joint Commission, pp. 1014-1015;
- Geodetic Survey of Canada, p. 1015;
- Topographical Survey, p. 1016;
- Dominion Observatories, p. 1017.

## **PART II.—GOVERNMENT WAR-TIME ADMINISTRATION**

In the 1942 edition of the Year Book, sections appeared under this heading relating to the major War Departments of Munitions and Supply and National War Services. The treatment was approached from a functional standpoint. This statement is not subject to much change and has not been repeated in this edition. Current information on these Departments and especially of the place they occupy in the war effort appears in the Introduction.

# CHAPTER XXX.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA

## CONSPECTUS

	PAGE		PAGE
SECTION 1. THE DOMINION BUREAU OF STATISTICS.....	1012	SECTION 4. PUBLICATIONS OF PROVINCIAL GOVERNMENTS.....	1034
SECTION 2. ACTS ADMINISTERED BY DOMINION DEPARTMENTS.....	1024	SECTION 5. REPORTS OF DOMINION AND PROVINCIAL ROYAL COMMISSIONS, TOGETHER WITH A SELECTION OF REPORTS OF BRITISH ROYAL COMMISSIONS HAVING A BEARING ON CANADA.....	1043
SECTION 3. PUBLICATIONS OF DOMINION DEPARTMENTS.....	1027		

The chief source of information on the current state of the country is the Dominion Bureau of Statistics, organized as the central statistical bureau for Canada, and described in Section 1. Section 2 contains a list of the Acts of Parliament administered by the several Departments of the Dominion Government, and Section 3 a bibliography of the publications of these Departments. This is followed, in Section 4, by a bibliography of the publications of Provincial Governments, and by a list of Royal Commissions appointed by the Dominion or the provinces as well as British Royal Commissions concerned with Canada, given in Section 5.

### Section 1.—The Dominion Bureau of Statistics

The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).<sup>\*</sup> The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (1) a series of specific reforms and enlargements in Canadian statistics, and (2) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this report, the office of Dominion Statistician was created but it was not until 1918 that the recommendations of the Commission were embodied in legislation.

The 1941 Year Book, at pp. 968-969, gives salient features of the Statistics Act and outlines the growth, organization and purpose of the Bureau. A fuller account of the formation of the Bureau is given at pp. 961-964 of the 1922-23 Year Book.

**Publications.**—Items in the vote of the Bureau, passed by Parliament each year, provide limited funds for the printing and processing of reports and bulletins. Reports printed from type are set up by the King's Printer, but the Bureau itself operates its own offset printing presses and all processed reports and bulletins are completely printed as well as published by the Bureau of Statistics.

The present policy with regard to the distribution of publications is based on sales to the public at actual cost of paper and presswork only; compilation, editing and other overhead costs are not included. The object is to extend the service to the public as widely as possible and so spread the compilation and overhead, which are the big items in total costs. A special subscription rate of \$30 per year entitles the subscriber to receive a copy of each publication as issued, with the exception of news bulletins. Other special rates are set for series of publications in related groups; these are referred to in the respective sections of the following list.

<sup>\*</sup> Consolidated as the Statistics Act (c. 190, R.S.C., 1927).

Applications for reports should be sent to the Bureau of Statistics; they should indicate the individual publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada, Ottawa.

## ADMINISTRATION—

Annual Report of the Dominion Statistician. (Included in the Annual Report of the Department of Trade and Commerce, *Price 25 cents.*)

## POPULATION—

### 1. CENSUS

(A) *Report of the Seventh Census of Canada, 1931:—*

Vol. I. General—Administrative Report of the Seventh Census followed by a summary of the leading facts of the Censuses of Population and Agriculture, Institutions, Merchandising and Service Establishments, etc., and cross-analyses relating thereto. The Appendix gives a complete bibliography of census materials and reproduces the more salient figures for specified years, chronologically arranged, back to 1605. The volume also contains a series of life tables for the Dominion and each province. *Price, Cloth \$1.50, Paper \$1.*

Vol. II. Population by Local Subdivisions—Conjugal condition, racial origin, religion, birthplace, year of immigration, language, literacy, school attendance, etc. *Price, Cloth \$1.50, Paper \$1.*

Vol. III. Ages of the People—Classified by sex, conjugal condition, racial origin, religion, birthplace, language, literacy, year of immigration, naturalization, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. IV. Birthplace, Racial Origin, and Year of Immigration of the People—Classified and cross-classified by conjugal condition, naturalization and citizenship, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*

Vol. V. Earnings of Wage-Earners, Dwellings, Households, Families, Blind and Deaf-Mutes—Cross-classified by birthplace, conjugal condition, year of immigration, naturalization and citizenship, racial origin, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*

Vol. VI. Unemployment—Classified by industry, occupation, cause, age, sex, conjugal condition, period of idleness, birthplace, racial origin, year of immigration. *Price, Cloth \$1, Paper 75 cents.*

Vol. VII. Occupations and Industries—Cross-classified by birthplace, race, age, sex, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. VIII. Agriculture—Agricultural population, farm holdings and land area, tenure, value of farm property and farm products, acreage and yields of crops, live stock, mortgage indebtedness and farm expenses, farm machinery, facilities and roads, co-operative marketing, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. IX. Institutions—Hospitals for the Sick—Type, bed capacity, facilities, movement of patient population, personnel, capital investment, maintenance, receipts and expenditures, etc.; Mental Hospitals—Movement of patient population; their psychoses, age, nativity, racial origin, economic condition, conjugal condition, environment, literacy, religion, administration and personnel, etc.; Charitable and Benevolent Institutions—Type, movement and population, finance, inmates, age, sex, administration and personnel, etc.; Penitentiaries and Corrective and Reformatory Institutions—Inmates, offences, sentences, age, birthplace, citizenship, racial origin, previous employment, environment, educational status, conjugal condition, social habits, overseas service, administrative staff, receipts and expenditures. *Price, Cloth \$1, Paper 75 cents.*

Vol. X. Merchandising and Service Establishments—Retail merchandise trade showing number of stores, employment and wages, operating expenses, sales and stocks, by provinces, with tables in lesser detail for incorporated places of 1,000 population or over. *Price, Cloth \$1, Paper 75 cents.*

Vol. XI. Merchandising and Service Establishments—Similar information to that given in Vol. X for retail service and for wholesale establishments. Special sections dealing with chain stores, hotels and the distribution of manufacturers' sales. *Price, Cloth \$1, Paper 75 cents.*

Vols. XII and XIII. Census Monographs—Consisting of a series of studies of outstanding Canadian problems as follows:—

## POPULATION—continued

## I. CENSUS—continued

(A) *Report of the Seventh Census of Canada, 1931*:—concluded

Vol. XII. (1) The Canadian Family; (2) Fertility of the Population of Canada; (3) Housing in Canada; (4) Illiteracy and School Attendance in Canada; (5) The Age Distribution of the Canadian People; (6) Canadian Life Tables. *Price, Cloth \$1, Paper 75 cents.*

Vol. XIII. (7) Unemployment; (8) Dependency of Youth; (9) Rural and Urban Composition of the Canadian People; (10) Racial Origins and Nativity of the Canadian People. *Price, Cloth \$1, Paper 75 cents.*

(B) *Report of the Quinquennial Census of the Prairie Provinces, 1936*:—Vol. I. Population and Agriculture. (*Price \$1.*)

Pt. I. POPULATION—Age, conjugal condition, birthplace, racial origin, immigrant population, citizenship, naturalization, language and mother tongue, years at school, literacy, school attendance.

Pt. II. AGRICULTURE—Farm population, farm workers and weeks of hired labour, area and condition of occupied farm land, farm values and value of farm products, farm revenues, farm expenses, mortgages, liens and rates of interest, size of farm, tenure, field crops, crop failure, live stock, stock sold alive, stock slaughtered and animal products, type of farm, farm machinery, co-operative buying and selling, non-resident farms, vacant or abandoned farms, age of farm operator, years a farmer and years on present farm, birthplace of farm operator, racial origin of farm operator, immigrant farm operators and period of residence in Canada, apiaries.

Vol. II. Gainfully Occupied, Wage-Earners, Unemployment on June 1, 1936, Earnings and Employment during the Census year ended June 1, 1936, Buildings, Dwellings, Households and Families—Occupation, age, conjugal condition, birthplace, period of arrival of immigrants, racial origin, status, years at school, industry, retired males, cause of unemployment on June 1, 1936, duration of unemployment, relief, potential wage-earners (14-24 years), buildings, dwellings, all households, normal households, wage-earner households, tenure and sub-tenure, value of home, monthly rent, rooms occupied, kind of dwelling, size of household, families in household, lodgers, earnings of heads of households, all families, normal families, wage-earner families, female heads of families, earnings of heads of families. (*Price \$1.*)

[NOTE.—Vols. I and II are published for each province, *Price 50 cents each.*]

(C) *Bulletins (rotaprinted) of the Eighth Census of Canada, 1941*:—

(1) POPULATION—*Final Bulletins*—(*Price 10 cents each*) (in the case of *Bulletins A-1 to A-9* there are 10 bulletins under each heading, one for Canada and one for each province)—(A-1) Population of the Counties and Census Divisions of Canada and the Provinces, by Sex, classified as Rural and Urban; (A-2) Population Classified by Conjugal Condition and Sex for Canada and the Provinces, Rural and Urban, and for Urban Centres of 5,000 and Over; (A-3) Age; (A-4) Racial Origin; (A-5) Religion; (A-6) Birthplace; (A-7) Immigration and Citizenship; (A-8) School Attendance and Years of Schooling; (A-9) Language and Mother Tongue; (A-10) Population of Canada by Provinces, Federal Electoral Districts and Subdistricts; (A-11) Population of all Cities, Towns and Incorporated Villages in each Province of Canada; (A-12) Population of the "Greater Cities", i.e., those cities which have well-defined satellite communities in close economic relation to them—Montreal, Toronto, Vancouver, Winnipeg, Ottawa, Quebec, Hamilton and Windsor; (A-13) Population of the "Greater Cities" Classified by Sex, Age, Racial Origin, Religion, Birthplace, Immigration and Citizenship, School Attendance and Years of Schooling and Language and Mother Tongue; (A-14) Movement of Population—Giving Population by Years of Residence in Province of Residence at the Date of the Census and by the Province or Country of Last Residence; (A-15) Population of Municipal Wards of Cities of 100,000 Population and Over by Sex, Age, Racial Origin, Religion, Birthplace, Immigration and Citizenship, School Attendance and Years of Schooling and Language and Mother Tongue; (A-16) Population by Sex, Conjugal Condition, Age, Racial Origin, Religion, Birthplace, Immigration and Citizenship, School Attendance and Years of Schooling and Language and Mother Tongue for Social Areas of Vancouver and Winnipeg.

(2) B SERIES—Racial Origin by Conjugal Condition, Age, Religion, Birthplace, Period of Immigration and Naturalization and Citizenship, Official Language and Mother Tongue, School Attendance and Years of Schooling. A bulletin has been issued separately for Canada and each province.

## POPULATION—continued

## I. CENSUS—continued

(C) *Bulletins (rotaprinted) of the Eighth Census of Canada, 1941:—continued*(3) OCCUPATIONS, EMPLOYMENT AND EARNINGS, HOUSEHOLDS AND FAMILIES—*Preliminary Bulletins (Price 10 cents each)—*(A)—*(The bulletins are based on a 10 p.c. sample tabulation of the family-occupation card.)*

(1) Earnings of Wage-Earners and Wage-Earner Heads of Families, for Canada and Regions, Rural and Urban; (2) Gainfully Occupied by Occupation Groups, Industry Groups and Status, for Canada and Regions, Rural and Urban; (3) Wage-Earners by Cause of Unemployment, Weeks Employed, and Amounts of Earnings and Wage-Earner Families by Amounts of Earnings, for Canada and Regions, Rural and Urban; (4) Households by Type of Tenure, Value or Rent of Dwelling, and Number of Rooms, Persons and Lodgers per Household, for Canada and Regions, Rural and Urban; (5) Families by Size and Composition, for Canada and Regions, Rural and Urban; (6) Earnings by Occupation of Male Wage-Earners, for Canada and Regions.

(B)—(U-1) Wage-Earners Not at Work, June 2, 1941, for Canada and the Provinces, Rural and Urban and for Individual Urban Centres of 1,000 Population and Over. (HF-1) Buildings, Dwellings, Households and Families for Counties or Census Divisions, Rural and Urban, for Urban Areas by Size, and for Individual Urban Centres of 5,000 Population and Over. (O-1) Gainfully Occupied by Occupation and Industry Groups for Canada and the Provinces, Counties or Census Divisions, Urban Centres of 5,000 Population and Over, and the "Greater" City Areas of Montreal, Toronto, Vancouver and Winnipeg. (E-1) Earnings and Employment among Wage-Earners During the 12 Months' Period Prior to the Date of the Census, June 2, 1941, for Canada and the Provinces, Rural and Urban, Counties or Census Divisions, Urban Centres of 5,000 Population and Over, and for the "Greater" Cities (having 100,000 Population and Over in the City Proper).

(4) HOUSING—A series of bulletins on housing conditions in Canadian cities of 30,000 population or over. *Price 10 cents each.* (1) Regina. (2) Ottawa. (3) Victoria. (4) Halifax. (5) Windsor. (6) Hamilton. (7) Saskatoon. (8) Calgary. (9) Edmonton. (10) Vancouver. (11) Saint John. (12) Toronto. (13) Three Rivers. (14) London. (15) Winnipeg. (16) Fort William. (17) Kitchener. (18) Brantford. (19) Sudbury. (20) Verdun. (21) Sherbrooke. (22) Montreal. (23) Hull. (24) Quebec. (25) St. Catharines. (26) Kingston. (27) Outremont. (28) Summary Bulletin on Dwellings and Households in Cities of 30,000 Population and Over. (29) Crowding in Canadian Cities of 30,000 Population and Over. (30) Earnings, Persons, and Roomers Among Wage-Earner Private Families. (31) Canadian Farm Homes and Households. (32) Refrigeration Facilities in Canada. (33) Canadian Homes in Need of External Repairs.

(5) AGRICULTURE—*Preliminary Bulletins (Price 10 cents each)*—(1) The Number of Vegetable and Fruit Farms in Canada by Provinces. (2) The Number of Farms, The Number of Vegetable and Fruit Farms and the Acreage, Production and Value of Vegetables in Certain Counties of the Province of Ontario. (3) Manitoba: Number of Occupied Farms and of Fruit and Vegetable Farms by Census Division and Municipality. (4) Saskatchewan: Number of Occupied Farms and of Fruit and Vegetable Farms by Census Division and Municipality. (5) New Brunswick: Number of Occupied Farms and Fruit and Vegetable Farms by County and Parish. (6) Prince Edward Island: Number of Occupied Farms and of Fruit and Vegetable Farms by County and Township. (7) The Number of Farms, the Number of Vegetable and Fruit Farms and the Acreage, Production and Value of Vegetables in Certain Counties of the Province of Ontario. (8) Alberta: Number of Occupied Farms and of Fruit and Vegetable Farms by Census Division and Municipality. (9) Ontario: Number of Occupied Farms and of Fruit and Vegetable Farms by County and Township. (10) Manitoba: Area of Field Crops, 1941. (11) Ontario: Area of Field Crops, 1941. (12) British Columbia: Number of Occupied Farms and of Fruit and Vegetable Farms by Census Subdivision. (13) Prince Edward Island: Area of Field Crops, 1941. (14) Quebec: Number of Occupied Farms and of Fruit and Vegetable Farms by County. (15) New Brunswick: Area of Field Crops, 1941. (16) Alberta: Area of Field Crops, 1941. (17) Saskatchewan: Area of Field Crops, 1941. (18) Nova Scotia: Number of Occupied Farms and Fruit and Vegetable Farms by County and Subdivision. (19) Quebec: Area of Field Crops, 1941. (20) British Columbia: Area of Field Crops, 1941. (21) Nova Scotia: Area of Field Crops, 1941. (22) Canada: Number of Occupied Farms and of Fruit and Vegetable Farms by Province. (23) Canada: Area of Field Crops, 1941. (24) Prince Edward Island: Number and Value of Live Stock on Farms. (25)

(66) Canada: Animal Products of Farms, 1940. (67) Canada: Farm Machinery, 1941. (68) Prince Edward Island: Fruits and Nursery Products, Value and Production, 1940, Number of Trees, 1941. (69) Manitoba: Fruits and Nursery Products, Value and Production, 1940, Number of Trees, 1941. (70) Saskatchewan: Fruits and Nursery Products, Value and Production, 1940, Number of Trees, 1941. (71) Alberta: Fruits and Nursery Products, Value and Production, 1940, Number of Trees, 1941. (72) Canada: Farm Operators Classified by Age Groups, 1941.

**II. INTERCENSAL ESTIMATES OF POPULATION****III. VITAL STATISTICS**

Annual Report on Vital Statistics of Canada, *Price 50 cents*; Preliminary Annual Report on Vital Statistics of Canada, *Price 25 cents*; Preliminary Quarterly Report on Vital Statistics of Canada, *Price 50 cents per year*; Monthly Report of Births, Deaths and Marriages Registered in Cities, *Price 50 cents per year*; A Study in Maternal, Infant and Neo-Natal Mortality, 1926-40, *Price 25 cents*; Annual Report on Divorce, *Price 25 cents*; Deaths from External Violence and Due to Motor Vehicle Accidents, *Price 25 cents*.

**PRODUCTION****I. ANNUAL SURVEY OF PRODUCTION**

Including and differentiating gross and net values of—(1) Primary Production (agriculture, forestry, fisheries, trapping, mining and electric power), (2) Secondary Production (general manufactures, custom and repair, and construction), and (3) Provincial and Per Capita Analyses, with explanation of method, *Price 25 cents*.

**II. AGRICULTURE (Subscription price for all publications of the Agricultural Branch, \$10 per year.)**

(1) *General Publications*—(a) Quarterly Bulletin of Agricultural Statistics with Annual Index. The official record of current and comparable statistical data pertaining to agriculture, summarized largely from the current reports listed below, *Price*

**PRODUCTION—continued****II. AGRICULTURE—concluded**

*\$1 per year; (b) Reprinted from the Quarterly Bulletin of Agricultural Statistics: The influence of precipitation and temperature on wheat yields in the Prairie Provinces, 1921-1940; Farm Expenditures in Alberta and Saskatchewan, 1934; Survey on Farm Operating Expenditures, Canada, 1938; Production of meat animals and consumption of meats in Canada, 1920-38, Price 10 cents each; (c) Semi-annual Reports on Cash Income from the Sale of Farm Products, Price 10 cents; (d) Annual Estimates of Gross and Net Value of Agricultural Production and Current Value of Farm Capital, Price 10 cents; (e) Seasonal Reports on Farm Wages, Price 10 cents; (f) Annual Summary of Cold Storage Holdings, Price 25 cents; (g) Wholesale Stocks of Food Commodities in Canada in Cold and Common Storage, 1920-1939, Price 25 cents; (h) Annual Report on the Fertilizer Trade, Price 25 cents.*

(2) *Field Crops—(a) Telegraphic Crop Reports, issued weekly, May-September, for the Prairie Provinces and every second week for all Canada; (b) Monthly Crop Reports covering area, quality, yield and value of principal field crops and carry-over stocks of Canadian grains, Price \$2 per year; (c) Hay, Pasture and Vegetable Seed Crop Reports, Price 10 cents; (d) Seasonal Reports on the Tobacco Crop with estimates of area, yield and value, Price 10 cents each; (e) Statistical Handbook of Canadian Tobacco, 1941, Price 25 cents.*

(3) *Grain and Grain Products—(a) Annual Report on the Grain Trade of Canada, Price 50 cents; (b) Monthly Review of the Wheat Situation, Price \$1 per year; (c) Quarterly Review of Canadian Coarse Grains, Price \$1 per year; (d) Weekly Report on Supplies and Movement of Canadian Grain, Price \$2 per year; (e) Monthly Report on Milling Statistics, Price 50 cents per year; (f) Location of Flour and Feed Mills with Capacity, annual, Price \$1; (g) The Grain Situation in Argentina, monthly, Price \$1 per year; (h) World Trade in Barley, 1927-1937, Price 50 cents; (i) World Trade in Wheat Flour, 1926-1938, Price 50 cents.*

(4) *Live Stock and Animal Products—(a) Annual Report on Live Stock and Animal Products Statistics, Price 50 cents; (b) June and December Surveys of Live Stock and Poultry, Price 10 cents each; (c) Annual Estimates of the Consumption of Meats, Price 10 cents; (d) Monthly Reports on Cold Storage Holdings of Meat and Lard, Price \$1 per year.*

(5) *Dairy and Poultry Products—(a) Annual Report on Dairying Statistics of Canada, Price 25 cents; (b) Monthly Review of Dairy Production, Price \$1 per year; (c) Annual Report on the Production of Poultry and Eggs, Price 25 cents; (d) Annual Report on Dairy Factories Statistics, Price 25 cents; (e) Annual Report on the Production of Processed Cheese, Price 10 cents; (f) Monthly Reports on the Production of Concentrated Milk Products, Price \$1 per year; (g) Monthly Reports on Cold Storage Holdings of Dairy and Poultry Products, Price \$1 per year; (h) Advance Preliminary Statement, monthly, of Stocks of Butter, Cheese and Eggs in the Principal Cities of Canada, Price 50 cents per year.*

(6) *Fruit and Vegetables—(a) Monthly Condition Reports (seasonal) with Preliminary Estimates of Fruit Production, Price \$1 per year; (b) Monthly Reports on Cold Storage Stocks of Fruits and Vegetables, Price \$1 per year.*

(7) *Honey, Sugar and Maple Products—(a) Seasonal Reports on the Production and Marketing of Honey, Price 10 cents; (b) Monthly Reports on Sugar Production with Annual Summary, Price \$1 per year (not available for general distribution); (c) Annual Report on Maple Products, Price 10 cents.*

**III. FURS**

*Advance Report on Fur Farms, Price 10 cents. Annual Report on Fur Farms, Price 25 cents. The Anticipated Pelt Production of Fur Farms, Canada, Price 10 cents. Advance Bulletin on Statistics of the Production of Raw Furs, Price 10 cents. Annual Bulletin on the Production of Raw Furs (comprising the pelts taken by trappers and those sold from fur farms), Price 25 cents.*

**IV. FISHERIES**

*Annual Report on Fisheries Statistics, Price 35 cents. Advance Bulletins on Fish Caught and Marketed, by Provinces: Prince Edward Island, Price 10 cents; Nova Scotia, Price 10 cents; New Brunswick, Price 10 cents; Quebec, Price 10 cents; Ontario, The Prairie Provinces and Yukon, Price 10 cents; British Columbia, Price 10 cents; Canada, Price 10 cents. Monthly Reports on Cold Storage Holdings of Fish, Price \$1 per year.*

## PRODUCTION—continued

### V. FORESTRY

Annual Summary of the Value, etc., of Forest Production (includes operations in the woods for sawmills, shingle mills, pulp and paper mills, etc., production of mining timber, production of poles and cross ties, and farm production of firewood, posts, etc.), *Price 25 cents.*

[See also Reports on Manufactures of Forest Products listed under "Manufactures", Section VII, Subsection (5).]

### VI. MINERAL PRODUCTION (MINING AND METALLURGY)

NOTE.—Subscription price for all Mines, Metallurgical and Chemical Reports [including Reports under groups (6), (7), (8) and (9), pp. 1019-1020.] \$15 per year.

(1) *General*—(a) Annual Report on the Mineral Production of Canada (1939, 1940 and 1941 now available), *Price 50 cents*; (b) Preliminary Report on the Mineral Production of Canada, 1943, *Price 25 cents*; (c) Monthly Reports on Leading Minerals—reports on gold, petroleum-natural gas production. *Yearly subscription, \$1 per report.*

(2) *Coal*—(a) Annual Report on Coal Statistics for Canada (1939, 1940 and 1941 now available), *Price 50 cents*; (b) Monthly Summary Report on Coal and Coke Statistics for Canada, *Price \$1 per year.*

(3) *Annual Bulletins on Mining—Metals*—The Gold-Mining Industry in Canada (including alluvial gold mining, auriferous quartz mining, copper-gold-silver mining, and tables showing Canadian and world production of gold), *Price 50 cents.* The Silver-Mining Industry in Canada (including silver-cobalt-arsenic mining and silver-lead-zinc mining), *Price 25 cents.* The Nickel-Copper Mining, Smelting and Refining Industry, *Price 25 cents.* The Non-Ferrous Smelting and Refining Industry, *Price 25 cents.* The Complete Mining Series of Reports (with the exception of Coal), *Price \$7.*

Non-Metals—Abrasives, *Price 15 cents*; Asbestos, *Price 25 cents*; Feldspar and Quartz, *Price 25 cents*; Gypsum, *Price 25 cents*; Iron oxides, *Price 15 cents*; Natural Gas, *Price 25 cents*; Petroleum, Crude, *Price 25 cents*; Salt, *Price 25 cents*; Talc and Soapstone, *Price 15 cents*; Miscellaneous Non-Metallic Minerals (including barytes, fluorspar, magnesium sulphate, mineral waters, moss, peat, phosphate, silica brick, sodium carbonate, sodium sulphate), *Price 25 cents.*

Structural Materials—The Cement Industry, *Price 25 cents*; Clay and Clay Products, *Price 25 cents*; Lime, *Price 25 cents*; Sand and Gravel, *Price 25 cents*; Stone, *Price 50 cents.*

[See also Reports on Iron and Steel and Their Products, Manufactures of Non-Ferrous Metals, Manufactures of Non-Metallic Minerals, and Chemicals and Allied Products listed under "Manufactures", Section VII, Subsections (6), (7), (8) and (9).]

### VII. MANUFACTURES

NOTE.—For publications of water-power and central electric station statistics, see under heading "Electric Stations", p. 1020.

(1) *General*—General Report on the Manufacturing Industries of Canada, *Price 50 cents.* Geographical Distribution of the Manufacturing Industries of Canada, *Price 25 cents*; also Reports for the Provinces and Leading Cities: Quebec, *Price 25 cents*; Ontario, *Price 25 cents*; British Columbia, *Price 25 cents*; Prairie Provinces, *Price 25 cents*; Maritime Provinces, *Price 25 cents.* Quantity of Manufacturing Production in Canada, 1923-29; Weekly Earnings of Male and Female Wage-Earners Employed in the Manufacturing Industries of Canada, *Price 25 cents.* List of Manufacturing Establishments Employing 50 Hands or More, *Price \$5.*

(2) *Manufactures of Vegetable Products* (Biennial)—General Report on Manufactures of Vegetable Products, *Price 50 cents.* Annual bulletins as follows: (a) Miscellaneous Food including Coffee, Tea and Spices, *Price 25 cents*; (b) Fruit and Vegetable Preparation, including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider, *Price 25 cents*; (c) Flour and Grist Mill Products, *Price 25 cents*; (d) Bread and Other Bakery Products, *Price 25 cents*; (e) Biscuits and Confectionery, including Cocoa and Chocolate, *Price 25 cents*; (f) Macaroni and Vermicelli, *Price 15 cents*; (g) Distilled Liquors, *Price 25 cents*; (h) Breweries, *Price 25 cents*; (i) Wine, *Price 25 cents*; (j) Rubber Industry, *Price 25 cents*; (k) Prepared Breakfast Foods, *Price 15 cents*; (l) Sugar Refineries, *Price 25 cents*; (m) Tobacco Products, *Price 25 cents*; (n) Vegetable Oil Mills, *Price 15 cents*; (o) The Canned Foods Industry, *Price 25 cents*; (p) Ice Cream, *Price 15 cents*; (q) Pack of Fruits and Vegetables (preliminary), *Price 10 cents*; (r) Aerated Waters, *Price 15 cents*; (s) Stock and Poultry Foods, *Price 25 cents*; (t) Stocks of Unmanufactured Tobacco on Hand, (quarterly report), *Price 50 cents*; (u) Stocks of Canned Fruits and Vegetables, (quarterly report), *Price 50 cents.*

## PRODUCTION—continued

## VII. MANUFACTURES—continued

- (3) *Animal Products and Their Manufactures*—Annual Report as follows: The Dairy Factory Industry, *Price 25 cents*. Advance Report on Production of Dairy Factories, *Price 10 cents*. Annual bulletins: (a) Slaughtering and Meat Packing and Sausage and Sausage Casings, *Price 25 cents*; (b) Processed Cheese, *Price 10 cents*; (c) Leather Tanneries, *Price 25 cents*; (d) Miscellaneous Leather Goods, Leather Belting, Leather Boot and Shoe Findings, *Price 25 cents*; (e) Leather Boots and Shoes, *Price 25 cents*; (f) Leather Gloves and Mittens, *Price 20 cents*; (g) Fur Goods and Fur Dressing, *Price 25 cents*. Monthly bulletin on Boot and Shoe Production, *Price \$1 per year* (including annual). Monthly bulletin on Concentrated Milk Products, *Price \$1 per year* (including annual report on the dairy factory industry).

(See also Reports on Live Stock, etc., listed under "Agriculture".)

- (4) *Textile and Allied Industries* (Biennial)—General Report on the Textile Industries of Canada, *Price 50 cents*. Annual Bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread and waste), *Price 35 cents*; (b) Woollen Textiles (cloth, yarn, waste, carpets, and woollen goods, n.e.s.), *Price 35 cents*; (c) The Silk Industry, *Price 25 cents*; (d) Men's Factory Clothing, including men's furnishings, *Price 25 cents*; (e) Women's Factory Clothing, *Price 25 cents*; (f) Hats and Caps, *Price 25 cents*; (g) Hosiery and Knitted Goods, *Price 25 cents*; (h) Oiled Clothing and Waterproofs, *Price 15 cents*; (i) Cordage, Rope and Twine, *Price 25 cents*; (j) Corsets, *Price 15 cents*; (k) Cotton and Jute Bags, *Price 15 cents*; (l) Dyeing and Finishing of Textiles, *Price 15 cents*; (m) Awnings, Tents and Sails, *Price 15 cents*.

- (5) *Manufactures of Forest\* Products*—Printed Reports, *Price 50 cents each*; (a) The Lumber Industry, 1938-39; (b) The Pulp and Paper Industry, 1938-39; (c) Wood-Using Industries, 1934-36; (d) Paper-Using Industries, 1934-37. Annual bulletins: (a) The Lumber Industry, 1938-39, *Price 35 cents*; (b) Lumber Distribution in Canada and the United States (biennial), *Price 25 cents*; (c) The Pulp and Paper Industry, *Price 30 cents*; (d) Wood-Using Industries (Summary), *Price 35 cents*. Annual Preliminary Reports on Wood-Using Industries: (a) Planing Mills, Sash and Door Factories, *Price 20 cents*; (b) Hardwood Flooring, *Price 15 cents*; (c) Furniture, *Price 15 cents*; (d) Boxes, Baskets and Crates, *Price 15 cents*; (e) Carriages, Sleighs and Vehicle Supplies, *Price 15 cents*; (f) Cooperage, *Price 10 cents*; (g) Coffins and Caskets, *Price 10 cents*; (h) The Wooden Refrigerator Industry, *Price 10 cents*; (i) Boat Building, *Price 10 cents*; (j) Lasts, Trees and Shoe Findings, *Price 10 cents*; (k) Handles, Spools and Woodturning, *Price 10 cents*; (l) Wooden-ware, *Price 10 cents*; (m) Excelsior, *Price 10 cents*; (n) Beekeepers' and Poultrymen's Supplies, *Price 10 cents*; (o) Miscellaneous Wood-Using Industries, *Price 10 cents*. Annual Preliminary Reports on Paper-Using Industries: (a) The Printing Trades (comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition; and Blue Printing) *Price 35 cents*; (b) Paper Boxes and Bags, *Price 25 cents*; (c) Roofing Paper, *Price 10 cents*; (d) Miscellaneous Paper Goods, *Price 10 cents*. Monthly bulletins: (a) Asphalt Roofing Production, *Price 10 cents per copy*, or *50 cents per year*; (b) Asphalt Roofing Sales, *Price 10 cents per copy*, or *50 cents per year*.

- (6) *Iron and Steel and Their Products*—Biennial Report, *Price 50 cents*. Annual bulletins as follows: Preliminary Summary on the Iron and Steel Industry, *Price 15 cents*—(a) Primary Iron and Steel, *Price 25 cents*; (b) Iron Castings, *Price 25 cents*; (c) Heating and Cooking Apparatus, *Price 25 cents*; (d) Boilers, Tanks and Plate-work, *Price 25 cents*; (e) Farm Implements and Machinery, *Price 25 cents*; (f) Automobile parts and Accessories, *Price 25 cents*; (g) Automobile Statistics for Canada, *Price 50 cents*; (h) Railway Rolling-Stock, *Price 25 cents*; (i) Wire and Wire Goods, *Price 25 cents*; (j) Sheet Metal Products, *Price 25 cents*; (k) Hardware, Tools and Cutlery, *Price 25 cents*; (l) Bridge Building and Structural Steel, *Price 25 cents*; (m) Machinery, *Price 25 cents*; (n) Bicycles, *Price 15 cents*; (o) Shipbuilding, *Price 15 cents*; (p) Aircraft, *Price 15 cents*; (q) Miscellaneous Iron and Steel Products, *Price 25 cents*; (r) Iron and Steel and Their Products (final summary), *Price 10 cents*. Commodity bulletins on the production of pig-iron, steel, washing machines, cream separators, warm air furnaces, galvanized sheets, wire nails, wire rope and cable, steel wire, wire fencing, stoves, etc. Monthly Reports: (a) Pig-Iron, Steel, and Ferro-Alloys, *Price \$1 per year*; (b) Steel Ingots, *Price \$1 per year*. Quarterly Report on Galvanized Sheets, *Price \$1 per year*.

\*Subscription price for all Forestry publications \$5 per year.

† These reports, for years later than 1939, have been discontinued for the duration of the War.

## PRODUCTION—concluded

## VII. MANUFACTURES—concluded

- (7) *Manufactures of Non-Ferrous Metals*—Biennial Report, *Price 50 cents*. Annual bulletins as follows: (a) Aluminum Products, *Price 15 cents*; (b) Brass and Copper Products, *Price 25 cents*; (c) White Metal Alloys, *Price 25 cents*; (d) Jewellery and Silverware, *Price 25 cents*; (e) Electrical Apparatus and Supplies, *Price 50 cents*; (f) Miscellaneous Non-Ferrous Metal Products, *Price 15 cents*; (g) Non-Ferrous Smelting and Refining, *Price 25 cents*; (h) Manufactures of Non-Ferrous Metals (final summary), *Price 10 cents*. Quarterly Reports: Production and Sales of Radio Sets, *Price \$1 per year*; Sales of Storage Batteries, *Price \$1 per year*. Commodity bulletins on the production of batteries, silverware, vacuum cleaners, electric motors and generators, electric transformers, incandescent lamps, etc.
- (8) *Manufactures of Non-Metallic Minerals*—Biennial Report, *Price 50 cents*. Annual bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals, *Price 10 cents*—(a) The Asbestos Mining Industry and the Asbestos Products Industry, *Price 25 cents*; (b) The Cement Industry, *Price 25 cents*; (c) Coke and Gas, *Price 25 cents*; (d) Glass (blown, cut, and ornamental, etc.), *Price 15 cents*; (e) Gypsum Mining and Gypsum Products Industry, *Price 25 cents*; (f) Lime, *Price 25 cents*; (g) Petroleum Products, *Price 50 cents*; (h) Clay and Clay Products, *Price 25 cents*; (i) Salt, *Price 25 cents*; (j) Sand-Lime Brick, *Price 15 cents*; (k) Stone (primary and manufactures), *Price 50 cents*; (l) Abrasives, *Price 15 cents*; (m) Miscellaneous Non-Metallic Mineral Products (including carbon electrodes—gypsum products—mica products—non-metallic minerals, *n.e.s.*), *Price 15 cents*. Non-Metallic Mineral Products (final summary), *Price 10 cents*. Special Report on the Consumption of Coke in Canada, *Price 25 cents*. Monthly Report on Coal and Coke Statistics, *Price \$1 per year*.
- (9) *Chemicals and Allied Products*—Biennial Report, *Price 50 cents*. **National Revenue.**—Customs (42); Customs Tariff (44); Excise (60); Export (63); Income War Tax, 1917 (97); Special War Revenue, 1915 (179). *The following Acts are administered in part.*—Animal Contagious Diseases (6); Canada Shipping (1934, c. 44); Copyright (32); Customs and Fisheries Protection (43); Dairy Industry (45); Destructive Insect and Pest (47); Explosives (62); Export of Gold (1932, c. 33); Fertilizers (69); Food and Drugs (76); Fruit, Vegetables and Honey (1935, c. 62); Importation of Intoxicating Liquors (1928,

c. 31); Inspection and Sale (100); Live Stock and Live Stock Products (1939, c. 47); Maple Sugar Industry (1930, c. 30); Meat and Canned Foods (77); Opium and Narcotic Drug (144); Patent and Proprietary Medicine (151); Pest Control Products (5); Precious Metals Marking (84); Quarantine (168); Seeds (185); Transport (1938, c. 53); Weights and Measures (212).

**National War Services.**—Department of National War Services (1940, c. 22); War Charities (1940, c. 10); War Measures (in part) (206).

**Pensions and National Health.**—*Pensions:* Department of Pensions and National Health (Part I) (1928, c. 39); War Veterans' Allowance (1930, c. 48, and amendments); Pension (157 and amendments); Returned Soldiers' Insurance (1920, c. 54, and amendments). *The two latter Acts are adjudicated upon by the Canadian Pension Commission.* *National Health:* Department of Pensions and National Health (Part II) (1928, c. 39); Quarantine (168); Public Works Health (91); Leprosy (119); Canada Shipping (Part V); Sick Mariners and Marine Hospitals (1924, c. 44); Proprietary or Patent Medicine (151); Opium and Narcotic Drug (1929, c. 49, and amendments); Food and Drugs (including honey) (76 and amendments).

**Post Office.**—Post Office (161); Special War Revenue (in part) (179).

**Public Archives.**—Public Archives (8).

**Public Works.**—Expropriation (64); Ferries (68); Government Harbours, Piers and Breakwaters (Section 5) (89); Navigable Waters Protection (Part I) (140); Public Works (166); Government Works Toll (167); Railway (Section 248) (170); Dry Dock Subsidies (191); Telegraphs (194); National Art Gallery (1913, c. 33); Act Regulating Vehicular Traffic on Dominion Property (1930, c. 47).

**Secretary of State.**—Companies (27) as amended; Naturalization (138) as amended; Patents (150) as amended; Copyright (32) as amended; Unfair Competition (1932, c. 38); Canada Temperance (196); Boards of Trade (19) as amended; Ticket of Leave (197) as amended; Trade Unions (202); Companies' Creditors Arrangement (1932-33, c. 36); Canadian Nationals (21); Department of State (189); Translation Bureau (1934, c. 25); Treaties of Peace Acts and Orders in Council; Reparation Payment Act (1929, c. 55); Timber Marking (198) as amended; Trade Mark and Design (201) as amended; Public Officers (164); Shop Cards Registration (1938, c. 41); Bankruptcy (11) as amended; Revised Regulations respecting Trading with the Enemy (1943); The Patents, Designs, Copyright and Trade Mark (Emergency) Order (1939); Seals Act (1939, c. 22); Oaths of Allegiance Act (143) as amended.

**Trade and Commerce.**—Canada Grain (1930, c. 5; 1932-33, cc. 9, 24; 1934, c. 26; 1938, c. 5; 1939, c. 36; 1940, c. 6); Electricity and Fluid Exportation (54); Electricity Inspection (55); Electric Units (56); Gas Inspection (82); Inland Water Freight Rates (208); Precious Metals Marking (84) and (1928, c. 40; 1929, c. 53; 1940-41, c. 8; 1942, c. 6); Statistics (190); Weights and Measures Inspection (212) and (1935, c. 48); Research Council (1924, c. 64); Canadian Wheat Board (1935, c. 53; 1939, c. 39; 1940, c. 25; 1942, c. 4); Dominion Trade and Industry Commission (1935, c. 59); Grain Futures (1939, c. 31).

**Transport.**—Canada Shipping (1934, c. 44); Government Harbours and Piers (89); Live Stock Shipping (122); Maritime Conventions (126); Navigable Waters Protection (Part II) (140); Government Vessels Discipline (203); The Water-Carriage of Goods, 1936 (1936, c. 49); United States Wreckers (214); Belleville Harbour Commission (1889, c. 35); Hamilton Harbour Commission (1912, c. 98); North Fraser Harbour Commission (1913, c. 162); New Westminster Harbour Commission (1913, c. 158); Trenton, Ontario, Harbour Commission (1922, c. 50); Toronto Harbour Commission (1911, c. 26); Winnipeg and St. Boniface Harbour Commission (1912, c. 55); National Harbours Board (1936, c. 42); Department of Transport (171) as amended (1936, c. 34); Government Railways (173); Intercolonial and Prince Edward Island Railways Employees' Provident Fund (1907, c. 22); National Transcontinental Railway (1903, c. 71); Canadian National Railways (172); Government Employees' Compensation (30); Canadian National Steamships (1927, c. 29); Maritime Freight Rates (79); Canadian National-Canadian Pacific (1933, c. 33) as amended (1936, c. 25); Railway (170); Trans-Canada Air Lines (1937, c. 43); Aeronautics (3); Transport, 1938 (1938, c. 53); Radio, 1938 (1938, c. 50); Carriage by Air, 1939 (1939, c. 12); An Act Respecting the Beauharnois Light, Heat and Power Co. (1931, c. 19); An Act to declare certain works of the Beauharnois Light, Heat and Power Company to be for the general advantage of Canada (1931, c. 20); Bridges (20); Montreal Terminals (1929, c. 12); Telegraphs (194).

## Section 3.—Publications of Dominion Departments

### List of Principal Publications of the Departments of the Government of the Dominion of Canada as Compiled from Information Supplied by the Respective Departments

*NOTE.*—The Department of Public Printing and Stationery issues an annual catalogue with quarterly supplements, containing titles and selling prices of official publications, Price 25 cents.

Intending purchasers should be careful to give the exact title of the publication desired and prepayment of charges is required with each order. Remittances by postal money order, express order or accepted cheque made payable to the Receiver General of Canada should be mailed to the King's Printer, Ottawa. The use of currency for this purpose is contrary to the advice of the postal authorities and entails a measure of risk. Postage stamps and foreign money will not be accepted. The Special War Revenue Act requires that no person shall issue a cheque payable at or by a bank unless there is affixed thereto an excise or postage stamp; cheques up to and including \$100, 3-cent stamp and cheques over \$100, 6-cent stamp.

No extra charge is made for postage on documents forwarded to points in Canada and the United States, but cost of postage is added to the selling price as indicated when publications are to be mailed to other countries.

There appears to be a widespread view that statutes, blue books and other publications are distributed free of charge by the King's Printer, and it is desirable to correct this impression. In the case of certain publications a limited free distribution is made by the King's Printer under authority of Order in Council.

**Agriculture.**—Annual Reports of the Minister, the Veterinary Director General, and Progress Reports of the Dominion Agrostologist, 1934-36, Dominion Animal Husbandman, 1930-36, Dominion Apiarist, 1934-36, Dominion Bacteriologist, 1937, Dominion Botanist, 1935-37, Dominion Cerealists, 1934-37, Dominion Chemist, 1934-36, Dominion Horticulturist, 1931-33, Dominion Poultry Husbandman, 1934-36, Economic Fibre Production, 1934-36, Tobacco Division, 1931-34. Divisions of the Experimental Farms Service. Progress Reports covering the work conducted on the Experimental Farms and Stations located at Agassiz, B.C., 1931-35, Brandon, Man., 1931-36, Farnham, Que., 1931-35, Fort Vermilion, Alta., 1931-38, Kapuskasing, Ont., 1936-40, Kentville, N.S., 1931-36, L'Assomption, Que., 1930-36, Lennoxville, Que., 1931-36, Manyberries, Alta., 1927-36, Nappan, N.S., 1932-36, Regina, Sask., 1931-36, St. Joachim Horse Farm, 1919-40, Summerside Fox Ranch, P.E.I., 1935-41, Swift Current, Sask., 1931-36. Bulletins and circulars of the Experimental Farms Service and Science Service on a great variety of agricultural subjects, including publications of the following Divisions: Field Husbandry; Animal Husbandry; Horticulture; Cereal; Chemistry; Forage Plants; Botany; Entomology; Animal Pathology; Poultry; Tobacco; Economic Fibre; Bacteriology; Bees; and Illustration Stations. Bulletins and circulars from the various Divisions of the Production Service and Marketing Service including publications of the Dairy Products Division relating to the dairying and cold storage industries in Canada, the making of butter and cheese, dairying experiments, co-operation, etc. Reports, bulletins, circulars, etc., of the Live Stock and Live Stock Products Division on cattle, sheep, swine, and poultry, marketing of eggs, wool, etc. Bulletins of the Health of Animals Division with regulations as to: contagious abortion; rabies; sheep scab; actinomycosis; anthrax; glanders; hog cholera; tuberculosis; foot-and-mouth disease; quarantine; and meat inspection. Bulletins and reports of the Plant Products Division as to seed-testing, the production and use of seed grains, the Seed Control Act, the Feeding Stuffs Act, and the Fertilizers Act. Bulletins and circulars of the Plant Protection Division and instructions to importers of nursery stock. Bulletins and reports of the Fruit and Vegetable Division relating to the marketing of fruits and vegetables and their preservation, the Fruit, Vegetables and Honey Act, and the Maple Sugar Industry Act.

A pamphlet entitled "List of Publications" contains a list of the publications of the Department, numbering more than 300. These publications include reports, bulletins, and circulars on field crops, live stock, dairying, orchard and garden, animal, insect, and plant diseases, bee-keeping, poultry, and miscellaneous topics. With few exceptions, the publications of the Department are free on application to its Publicity and Extension Division.

**Auditor General.**—Annual Report—incorporated with the "Public Accounts of the Dominion of Canada".

**Board of Transport Commissioners for Canada.**—Annual Report. Pamphlet Containing Judgments, Orders, Regulations, and Rulings, issued fortnightly.

**Civil Service Commission.**—Annual Report. Regulations of the Civil Service Commission. The Classification of the Civil Service of Canada. Positions exempted from the Civil Service Act. Various pamphlets dealing with examinations for Clerks, Stenographers and Typists; Customs Service; Postal Service; Junior Trade Commissioners; Positions in the Civil Service open to graduates and under-graduates in Agriculture and related courses.

**External Affairs.**—Annual Report. Annual Treaty Series. British and Foreign Government Representatives in Canada.

**Finance.**—Annual Report on the Public Accounts of the Dominion of Canada. Monthly Statements of the Chartered Banks of Canada. Estimates. Reprint of the Budget Speech of the Minister of Finance. Report on the Administration of Old Age Pensions in Canada. Report of the Royal Canadian Mint.

**Fisheries.**—

NOTE.—Publications of the Department of Fisheries are distributed at the discretion of the Department and applicants for any papers should indicate the purposes for which they are desired. In some cases charges may be made.

(Publications marked\* are available in both English and French editions.) \*Annual Report, including Fish Culture Report. Annual Statistical Report (contains both English and French Sections). Fish Culture Report. Popular Account of a Number of Canadian Fishes—A. Halkett. \*Canada's Fisheries. Map of the Atlantic Coast Provinces showing the Inshore and Deep-Sea Fishing Grounds. Statistics of the Haddock Fishery in North American Waters—A. W. H. Needler. Statistics of the Catch of Cod off the East Coast of North America, 1926—O. E. Sette. Statistics of the Mackerel Fishery off the East Coast of North America, 1804 to 1930—O. E. Sette and A. W. H. Needler. Discoloration, Smut or Blackening of Canned Lobsters—Harrison and Hood. Historical Account of the Lobster-Canning Industry—R. H. Williams. \*Fish Canning in Canada (non-technical). \*Fisheries News Bulletin (monthly). \*The Salmon Fishery of British Columbia. Report on Fisheries Investigations in Hudson Bay, 1930. \*Summary of the Report by Messrs. Cockfield, Brown and Company, Limited, on the Marketing of Canadian Fish and Fish Products. \*Hardening Mud Bottoms for Oyster Culture (mimeographed). \*Factors in the Shipment of Live Lobsters from Eastern Nova Scotia. \*The Life of the Atlantic Salmon. \*Proceedings No. 1 of the North American Council on Fishery Investigations, 1921-30. \*Proceedings No. 2, 1931-33, and \*Proceedings No. 3, 1934-36. \*Report of the Royal Commission Investigating the Fisheries of the Maritime Provinces and the Magdalen Islands, 1927. The Storage of Oysters—A. W. H. Needler. Check List of the Fishes of the Dominion of Canada and Newfoundland, illustrated (\$2)—A. Halkett. \*Memoranda dealing with certain methods of fish processing. (Correspondents asking for papers in this group must indicate the particular processing method about which they wish information.) \*Memorandum descriptive of some fish hatchery methods. A fish cookery booklet, \*100 Tempting Fish Recipes is made available to women by the department. No charge is made to women for single copies of the pamphlet.

**Insurance.**—Annual Statement showing List of Registered Insurance Companies. Annual Abstract of Statements of Registered Insurance Companies (subject to correction). Annual Reports of the Insurance Department, Vol. I (Fire and Miscellaneous), Vol. II (Life Companies and Fraternal Benefit Societies). Annual List of Securities held by Insurance, Trust and Loan Companies, with Department's Valuation thereof. Annual Abstract of Statements of Loan, Small Loan and Trust Companies (subject to correction). Annual Report of Loan and Trust Companies. Annual Report of Small Loan Companies. Classification of Fire Insurance Risks. Table of Bond Values. Statistical Report of Fire Losses in Canada.

**Justice.**—Annual Report of the Superintendent of Penitentiaries. Canadian Constitutional Decisions of the Judicial Committee, *Price \$5*.

**King's Printer and Controller of Stationery.**—Annual Report; The Annual Statutes; The Canada Gazette (published weekly); Annual Catalogue with quarterly supplements. Official Reports of Parliament (prices per session)—The Senate—Debates \$3, Minutes of Proceedings \$1; House of Commons—Debates \$3, Votes and Proceedings \$1, Orders of the Day \$1; Bills of the Senate and House of Commons (Public and Private) \$5. Revised Statutes of Canada, 1927, 5 volumes, \$10. Annual Statutes, 1928 to 1943, \$5 each. Acts (Public and Private), with amendments to date, 10 cents to \$1.50 per copy. Index of Local and Private Acts, 1867-1941, and Table of Public Statutes, 1907-1942, \$2. British North America Acts and Selected Statutes, 1867-1943, paper edition \$1.50, cloth edition \$2. Annual Departmental Reports at various prices. Periodicals—Agricultural Statistics (Quarterly Bulletin), yearly \$1, single copies 25 cents. Bank Statements (monthly), yearly \$1, single copies 10 cents. Board of Transport Commissioners (Fortnightly Review of Judgments, etc.), yearly \$3, single copies 20 cents. Business Statistics (Monthly Review), yearly \$1, single copies 10 cents. Canada Gazette (weekly), yearly \$8, single copies 20 cents. Canada Law Reports (including Exchequer Court Reports) (monthly), yearly \$6, single Parts 75 cents. Canadian Official Postal Guide, cloth \$1, Monthly Supplements, yearly 25 cents. Canadian War Orders and Regulations (weekly), yearly \$5, single copies 10 cents. Miscellaneous publications at various prices (quoted prices are for Canada and the United States only unless otherwise specified).

**Labour.**—Monthly.—The Labour Gazette (published in English and French), Subscription price 20 cents per annum, postage prepaid, to subscribers in Canada, the United States of America and Mexico, and \$1 per annum, postage prepaid, to subscribers in all other countries. Annual.—Report of the Department of Labour (separate reprints are issued of the chapters dealing with the administration of the following statutes: Industrial Disputes Investigation Act; Government Annuities Act; Employment Offices Co-ordination Act; Technical Education Act; Combines Investigation Act; Youth Training Act). Report on Wages and Hours of Labour in Canada. Report on Strikes and Lockouts in Canada and Other Countries. Report on Labour Organization in Canada. Report on Labour Legislation in Canada.

(from time to time there are issued consolidated reports, the most recent of which reproduces the text or a summary of all Dominion and provincial labour legislation in existence at Dec. 31, 1937). Report of Dominion-Provincial Youth Training Program and Dominion-Provincial War Emergency Training Program. *General Reports*.—Report of National War Labour Board. Report of Judicial Proceedings Respecting Constitutional Validity of the Industrial Disputes Investigation Act, 1907, and Amendments of 1910, 1918 and 1920. The Employment of Children and Young Persons in Canada. Trade Union Law in Canada. Wartime Orders in Council Affecting Labour. Workmen's Compensation in Canada. Recommended Practice of Industrial Lighting. Final Report of the National Employment Commission. *Reports of Investigations under the Combines Investigation Act*.—(1) Report of Commissioner on Alleged Combine in the Distribution of Fruit and Vegetables in Western Canada, 1925; (2) Report of Registrar on Alleged Combine Limiting Competition in the Marketing of New Brunswick Potatoes, 1925; (3) Report of Registrar on Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal, 1926; (4) Report of Commissioner on Alleged Combine in the Distribution of Fruits and Vegetables Produced in Ontario, 1926; (5) Interim Report of Registrar on the Proprietary Articles Trade Association, an Alleged Combine of Wholesale and Retail Druggists and Manufacturers, Established to Fix and Maintain Resale Prices of Proprietary Medicines and Toilet Articles, 1926; (6) Report of Commissioner on the Proprietary Articles Trade Association, 1927; (7) Report of Commissioner on the Amalgamated Builders' Council and Related Organizations, an Alleged Combine of Plumbing and Heating Contractors and Others in Ontario, 1929; (8) Report of Commissioner on the Electrical Estimators' Association, an Alleged Combine of Electrical Contractors in the City of Toronto, 1930; (9) Report of Registrar on Alleged Combine in the Bread-baking Industry in Canada, 1931; (10) Report of Commissioner on Alleged Combine in the Motion Picture Industry in Canada, 1931; (11) Report of Registrar on Alleged Combine of Tobacco Manufacturers and Other Buyers of Raw Leaf Tobacco in Ontario, 1933; (12) Report of Registrar on Alleged Combine in the Importation and Distribution of British Anthracite Coal in Canada, 1933; (13) Report of Commissioner under the Inquiries Act on Anthracite Coal, 1937; (14) Report of Commissioner on Alleged Combine in the Distribution of Tobacco Products in Alberta and Elsewhere in Canada, 1938; (15) Report of Commissioner on Alleged Combine in the Manufacture and Sale of Paperboard Shipping Containers and Related Products, 1939; (16) Report of Commissioner on Alleged Combine of Wholesalers and Shippers of Fruits and Vegetables in Western Canada, 1939. *Bulletins in Industrial Relations Series*.—(1) Joint Councils in Industry; (2) Report of a Conference on Industrial Relations Held at Ottawa in 1921; (3) Report of Joint Conference of the Building and Construction Industries in Canada, 1921; (5) Canada and the International Labour Conference; (7) Canadian Railway Board of Adjustment No. 1, Second Report; (8) Report of National Conference Regarding Winter Employment in Canada, 1924; (9) Canadian Railway Board of Adjustment No. 1, Third Report; (10) Canadian Railway Board of Adjustment No. 1, Fourth Report; (12) Canadian Railway Board of Adjustment No. 1, Fifth Report; (13) Canadian Railway Board of Adjustment No. 1, Sixth Report; (14) Canadian Railway Board of Adjustment No. 1, Seventh Report.

**Mines and Resources.**—MINES AND GEOLOGY BRANCH.—Annual Report Separate Mines and Geology Branch. *Bureau of Geology and Topography*.—Memoir 235, Snare River and Ingray Lake Map-areas, N.W.T.; Memoir 236, Moose Mountain and Morley Map-areas, Alberta; Memoir 237, Palaeozoic Geology of the London Area, Ontario; Geological Series No. 14, Petroleum Geology of Canada; Paper 43-1, Cowley Map-area, Alberta; Paper 43-2, Bourlamaque, Abitibi County, Quebec; Paper 43-3, Foothills belt of Central Alberta; Paper 43-5, Dyson Creek Map-area, Alberta; Paper 43-6, Notes on Structure of the Cadillac-Bourlamaque Area, Quebec; Paper 43-7, Rouyn-Beauchastel, Temiscamingue County, Quebec; Paper 43-12, Stanstead and Brome Counties, Quebec; Paper 43-14, St. Rose-Chimney Corner Coalfield, Inverness County, Nova Scotia; Paper 43-15, Geology and Mineral Deposits of Tyaughton Lake Area, British Columbia; Paper 44-2, Geology and Oil Prospects of Lone Mountain Area, British Columbia; Paper 44-4, Sherritt Gordon Mine Area, Manitoba; Paper 44-5, Northern Part of the Pinchi Lake Mercury Belt, British Columbia. *National Museum of Canada*.—No recent publications issued. *Bureau of Mines*.—Reprint, Prospectors Guide for Strategic Minerals in Canada; Petroleum Fuels Delivered for Consumption, Calendar year 1942; Peat Moss or Sphagnum Moss, Its Uses in Agriculture, Industry, and the Home; Reprint, The Storage of Explosives.

**LANDS, PARKS AND FORESTS BRANCH.**—Annual Report Separate Lands, Parks and Forests Branch. *Bureau of Northwest Territories and Yukon Affairs*.—The Northwest Territories 1943; The Yukon Territory 1944; Yukon Land of the Klondike; Conserving Canada's Musk-oxen; The Canadian Government's Reindeer Experiment; Regulations respecting Game in the Northwest Territories; Game Ordinance and Fur Export Tax Ordinance of Yukon Territory. *National Parks Bureau*.—(Booklets)—Canada's Mountain Playgrounds (Banff, Jasper, Waterton Lakes, Yoho, Kootenay, Glacier and Mount Revelstoke National Parks); Playgrounds of the Prairies (Riding Mountain, Prince Albert, Elk Island, Nemiskam, and Wood Buffalo National Parks); Playgrounds of Eastern Canada (Cape Breton Highlands, Prince Edward Island, Georgian Bay Islands, St. Lawrence Islands, Point Pelee National Parks and National Historic Parks); Fort Anne

National Historic Park; Guide to Fort Chambly; Guide du Fort Chambly; Fort Chambly National Historic Park; Le Parc historique national du Fort de Chambly; The Port Royal Habitation; Guide to Fort Lennox; Guide du Fort Lennox; Guide to Fort Wellington; The Lake Erie Cross; Geology of the National Parks of Canada in the Rockies and Selkirks, *Price 10 cents*; Catalogue of Films Produced by the National Parks Bureau of Canada; The Migratory Birds Convention Act and Federal Regulations for the Protection of Migratory Birds; Attracting Birds with Food and Water; L'Art d'Attirer les Oiseaux en leur offrant le Manger et le Boire; Bird Houses and Their Occupants; Maisons d'Oiseaux et Leurs Occupants; Lessons in Bird Protection; Leçons concernant la Protection des Oiseaux; The Blue Goose, *Price 50 cents*. (*Descriptive Folders*)—The National Parks of Canada; Banff National Park; Cape Breton Highlands National Park; Elk Island National Park; Georgian Bay Islands, St. Lawrence Islands, and Point Pelee National Parks; Jasper National Park; Kootenay, Yoho, Glacier, and Mount Revelstoke National Parks; Prince Edward Island National Park; Prince Albert National Park; Riding Mountain National Park; Waterton Lakes National Park.

**FOREST PRODUCTS LABORATORIES.**—Temperature and Moisture Contents Attained in Wood Aircraft Wings in Different Climates; The Effect of Moisture with Time on Casein Glues; Cost of Sawing Eastern Spruce Lumber; Production of Pine Tar by the Destructive Distillation of Canadian Softwoods; Investigation of Brown Streak in Western Hemlock used for Aircraft Purposes; Ethyl Alcohol from Wood Waste; Notes on Laminated Construction; A Comparison of the Strength of Plywoods Manufactured from Rotary Cut and Sliced Veneers; The Tension Normal to Glue-Line Plywood Test. *Research Notes*—(No. 1) Determination of Tree Heights from Shadows in Air Photographs; (No. 10) Forecasting Weather and Forest Fire Hazards from Local Observations; (No. 65) Site Types and Rate of Growth at Lake Edward; (No. 66) Development of Forest Site Classification in Quebec; (No. 67) Cleaning of Scattered Young Balsam and Spruce in cut-over Hardwoods; (No. 68) Improvement Cuttings in Intolerant Hardwood-Conifer Type; (No. 69) Silvicultural Operations, 1940-41; (No. 70) Some Growth Characteristics of Red Spruce. (71) Forest Growth on the Upper Lièvre Valley, Que.; (72) Dominant Height and Average Diameter as a Measure of Site in Untreated Even-aged Lodge-pole Pine Stands; Silvicultural Leaflets Nos. 1-19.

**SURVEYS AND ENGINEERING BRANCH.**—Annual Report Separate Surveys and Engineering Branch. *Dominion Observatory*, Ottawa—Seismological Bulletin (monthly); Wireless Time Signals (monthly); Vol. XIII, Nos. 9 to 14, inclusive, Bibliography of Seismology, *Price 25 cents each*. *Dominion Astrophysical Observatory*, Victoria, B.C.—Vol. VII, No. 12, Determination of the Magnitude Difference between the Components of Spectroscopic Binaries, *Price 30 cents*; Vol. VII, No. 13, The Spectrographic Orbit of H.D. 277826 (Boss 5620), *Price 25 cents*; Vol. VII, No. 14, The Spectrographic Orbits of H.D. 207650, *Price 25 cents*; Vol. VII, No. 15, Molecular Lines from the Lowest States of Diatomic Molecules Probably Present in Interstellar Space, *Price 25 cents*. *Geodetic Service*—No. 45, Altitudes in Northern Ontario, *Price 25 cents*, No. 46, Altitudes in Manitoba, *Price 25 cents*. *Dominion Water and Power Bureau*—Water Resources Paper No. 79, Surface Water Supply of Ontario and Quebec, 1935-36 and 1936-37 (bilingual); Water Resources Paper No. 83, Surface Water Supply of New Brunswick, Nova Scotia and Prince Edward Island 1936-37 and 1937-38; Water Resources Paper No. 84, Surface Water Supply of the Prairie Provinces, 1937-38 and 1938-39 and Water Resources Paper No. 86, Surface Water Supply of British Columbia, 1936-37 and 1937-38; *Hydrographic Service*—Tide Tables for Atlantic Coast and Pacific Coast, *Price 25 cents each*; Tide Tables, regional abridged editions, *Price 10 cents each*. Sailing Directions for the Saint John River, *Price 50 cents*; Southeast Coast Nova Scotia and Bay of Fundy Pilot, *Price \$1.25*; Gulf of St. Lawrence Pilot, *Price \$1.25*; Sailing Directions for the Hudson Bay Route, *Price 50 cents*; Sailing Directions for Lake Melville, *Price 50 cents*; St. Lawrence Pilot (below Quebec), *Price \$1*; St. Lawrence Pilot (Quebec to Montreal), *Price 50 cents*; St. Lawrence Pilot (Montreal to Kingston), *Price 50 cents*; Great Lakes Pilot, Volume I, *Price \$1*; Great Lakes Pilot, Volume II, *Price \$1.25*; Sailing Directions for the Canadian Shores of Lake Superior, *Price \$1*; British Columbia Pilot, Volume I, *Price \$1.50*; British Columbia Pilot, Volume II, *Price \$1*. Official navigation charts for Atlantic and Pacific Coasts of Canada, Hudson Bay, Great Lakes and other inland navigable waters. Precise Water Level Reports (Great Lakes and St. Lawrence Waterway). Catalogue of Nautical Charts, Sailing Directions and Tidal Information.

**Munitions and Supply.**—The Industrial Front, English and French; (Vol. I, Jan. 1 1942; Vol. II, July 1, 1942; Supplement to Vol. II, Oct. 1, 1942; Vol. III, Jan. 1, 1943; Vol. IV, a Supplement to Vol. III, July, 1943; Vol. V, now in preparation); Canada Supplies the Tools of War (illustrated), English; I.S.C. Branch—A Government Service organization—how it works and how to use it (Explanation of the "Bits and Pieces" program), English and French; Sub-Contracting in Canada's Munitions Industries (a manual for prime contractors), English; Priorities and Economic Controls, French and English; Wartime Controls in Canada (mimeographed), English; Manual of Procedure on Termination of Contracts, February, 1944, English—French copy in preparation; A consolidation as of January 1, 1944, of Orders in Council relating to, and orders made by the Wartime Industries Control Board controls.

**National Defence.**—Annual Report; Canadian Navy List; Naval General Order; General Orders, Army; Canadian Army Routine Orders; Flying Regulations, R.C.A.F.; Air Force General Orders.

**National Film Board.**—Annual Report; Catalogue of 16 mm. Films, 1942-43 "Eyes of Canada"; "Canada in Action" (film lecture notes for rural circuits); "National Film Board News" (Distribution Information); "Fighting Films" (film notes for industrial circuits).

**National Research Council.**—A list of publications issued by the National Research Council is available for free distribution on request. At the end of March, 1944, the number in the list was 1,200. This list includes Annual Reports of the Council; Technical Reports Nos. 1-29; Bulletins Nos. 1-19; Mimeographed Reports not hitherto listed as Council publications; Papers reprinted from the Canadian Journal of Research which contain (i) Reports of experimental work carried on in the National Research Laboratories, (ii) Reports of work done elsewhere with financial assistance from the National Research Council. All of these reports have been arranged in chronological order of publication and numbered in sequence. This series of publications is preceded by the letters "N.R.C. No."

The Canadian Journal of Research has not been included in the "N.R.C. No." series. Established as a medium for the publication in Canada of the results of original scientific research carried on in the Dominion, the Canadian Journal of Research is now published in six sections: A—Physical Sciences; B—Chemical Sciences; C—Botanical Sciences; D—Zoological Sciences; E—Medical Sciences; F—Technology. The Journal is to be found in the leading scientific libraries of the world. From its inception in May, 1929, to the end of Volume 12 in June, 1935, the Journal was issued in a single volume each month. *Copies of these 12 volumes unbound are available at \$1.50 each. An index of volumes 1-12 is available at \$1.* From July, 1935, to December, 1943, the Journal was published in four sections, each section being paged separately. Sections A and B were bound in one cover each month, and Sections C and D were likewise bound together. The issues from July to December, 1935, were included in Volume 13 (*price \$2*). Volume 14 contains the Journals issued in 1936 and one volume has been published each year since then. In January, 1944, two new sections were added, namely, Section E—Medical Sciences and Section F—Technology. Issue of the Journal was made bi-monthly, three sections appearing in each alternate month. Each of the six sections now appears under its own cover. *For the present, the two new sections are being issued without charge to subscribers to the other sections. Single numbers of the Journal are priced at 50 cents each; the yearly subscription for Sections A and B is \$2.50; Sections C and D, \$2.50; the four sections complete \$4.*

### BRITISH ROYAL COMMISSIONS CONCERNED WITH CANADA

*A list of British Royal Commissions having a bearing on Canada is given at p. 1116 of the 1940 Year Book.*

# CHAPTER XXXI.—THE ANNUAL REGISTER

## CONSPECTUS

	PAGE		PAGE
SECTION 1. PRINCIPAL EVENTS OF THE YEAR.....	1044	MISSIONS, ETC.....	1045
SECTION 2. EXTRACTS FROM THE <i>Canada Gazette</i> —OFFICIAL APPOINTMENTS, COM-		SECTION 3. DOMINION LEGISLATION, 1942-43.....	1051

### Section 1.—Principal Events of the Year

**The Royal Family.**—H.R.H. the Duke of Kent, K.G., brother of His Majesty King George VI, was killed on active service on Aug. 25, 1942, at the age of 39.

Announcement was made on Nov. 15, 1943, by the Prime Minister of the Commonwealth of Australia, of the appointment of His Royal Highness the Duke of Gloucester as Governor General of that Dominion as from July 21, 1944.

H.R.H. Princess Elizabeth, elder daughter of His Majesty King George VI and Her Majesty Queen Elizabeth and Heir Presumptive to the Throne, came of age Apr. 21, 1944, the 18th anniversary of her birth. The Princess was created a Royal Duchess and became a member of the Regency Council.

**Empire Conference.**—Winston S. Churchill, Prime Minister of the United Kingdom; W. L. Mackenzie King, Prime Minister of Canada; John Curtin, Prime Minister of the Commonwealth of Australia; Peter Fraser, Prime Minister of New Zealand; and Jan C. Smuts, Prime Minister of the Union of South Africa met at London, England, Apr. 10 to May 16, 1944, to discuss Empire matters pertaining to the War and the immediate post-war period. On May 11, Prime Minister Mackenzie King addressed a joint session of the Houses of Lords and Commons.

**Diplomatic Appointments.**—The personnel of Canadian Diplomatic representatives abroad and of British and foreign envoys to Canada, as at Feb. 28, 1944, is given at pp. 71-75 of this volume. Since the sending to press of Chapter III—Constitution and Government—the following four representatives of Canada's Allies presented their credentials to His Excellency the Governor General: The Brazilian Ambassador, Mr. Cyro de Freitas-Valle on Apr. 6, 1944; the Netherlands Ambassador, Jonkheer J. W. M. Snouk Hurgronje, on Apr. 13, 1944; the Mexican Ambassador, Dr. Francis Del Rio Canedo, on May 6, 1944; the Soviet Ambassador, Mr. G. N. Zaroubin, on June 8, 1944. The Turkish Minister to Canada, Mr. Sevki Alhan, was appointed on Feb. 15, 1944, but to date (June 15) has not presented his credentials. Hon. David Wilson was appointed High Commissioner for New Zealand to Canada on Mar. 30, 1944, and arrived in Ottawa on Apr. 21. Hon. W. F. A. Turgeon was appointed first Canadian Ambassador to Mexico on Mar. 16, 1944, and presented his credentials to the President of Mexico on Apr. 27. The following representatives were appointed High Commissioners for Canada in other countries: The High Commissioner to South Africa, Mr. C. J. Burchell, Feb. 15, 1944; the High Commissioner to Newfoundland, Mr. J. S. Macdonald, May, 4 1944.

**Provincial General Elections.**—A general election took place in Saskatchewan on June 15, 1944, when the Liberal Government of Hon. W. J. Paterson was defeated by the Co-operative Commonwealth Federation party. T. C. Douglas, the leader, was called up to form a Government—the first C.C.F. Government to take office in Canada. The results of the election were C.C.F. 47; Liberal 5.

### Section 3.—Dominion Legislation, 1942-43

#### Legislation of the Third Session of the Nineteenth Parliament, Jan. 22, 1942 to Jan. 27, 1943

NOTE.—This classified list of Dominion Legislation has been compiled from the Statutes. Naturally, in summarizing material of this kind it is not always easy to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes themselves. Adequate references are given in this summary.

Chapter and Date of Assent	Synopsis
<b>Finance and Taxation—</b>	
2 Mar. 27	<i>The Appropriation Act No. 1, 1942</i> grants an interim payment of \$38,803,172.40 out of the Consolidated Revenue Fund for expenses of the public service incurred during the fiscal year 1942-43, being one-sixth of the amount of the main estimates.
3 Mar. 27	<i>The Appropriation Act, No. 2, 1942</i> grants the payment of \$3,530,840 out of the Consolidated Revenue Fund for expenses of the public service based on further supplementary estimates for the fiscal year 1941-42.
7 Mar. 27	<i>The Supplementary 1941 War Appropriation Act</i> provides for payment of \$135,000,000, out of the Consolidated Revenue Fund, beyond the ordinary grants of Parliament, for expenses in connection with national defence and security incurred during the fiscal year 1941-42, and authorizes the re-expenditure of moneys received as refunds or repayments under authority of previous War Appropriation Acts.
8 Mar. 27	<i>The War Appropriation (United Kingdom Financing) Act, 1942</i> makes provision for the placing of a sum not exceeding \$1,000,000,000, out of the Consolidated Revenue Fund, in the Bank of Canada for the account of the United Kingdom for the purchase in Canada of munitions of war, foodstuffs and other supplies and to defray other expenses incurred in Canada arising out of the War.
9 Mar. 27	<i>The War Appropriation Act, No. 1, 1942</i> authorizes the payment, out of the Consolidated Revenue Fund, of a sum not exceeding \$500,000,000 for expenses incurred during the fiscal year 1942-43, being one-fourth of the amount of \$2,000,000,000 granted to His Majesty for the purpose of security, defence and welfare of Canada.

Legislation of the Third Session of the Nineteenth Parliament, Jan. 22,  
1942 to Jan. 27, 1943—continued

Chapter and Date of Assent	Synopsis
<b>Finance and Taxation—con.</b>	
11 May 28	<i>The Appropriation Act, No. 3, 1942</i> grants payment, out of the Consolidated Revenue Fund, of \$19,401,586.20 towards defraying the expenses of the public service during the fiscal year 1942-43, being one-twelfth of the items contained in the main estimates, together with an additional interim of \$550,655.91, being one-twelfth of the amount set forth in the Schedule to the Act.
13 May 28	<i>The Dominion-Provincial Taxation Agreement Act, 1942</i> authorizes the Governor in Council to enter into agreements with the Governments of the Provinces of Canada respecting the vacating by the Provinces and their municipalities of the personal income and corporation tax fields for the duration of the War, and for a certain readjustment period thereafter, and fixes the amounts of compensation payable by the Dominion to the provinces therefor.
14 May 28	<i>The Maritime Provinces Additional Subsidies Act, 1942</i> authorizes payment out of the Consolidated Revenue Fund of additional annual subsidies to the Maritime Provinces with the proviso that such subsidies shall not be payable while agreements under the provisions of the Dominion-Provincial Taxation Agreement Act, 1942, remain in force.
18 June 12	<i>The Appropriation Act, No. 4, 1942</i> grants the payment out of the Consolidated Revenue Fund, of \$19,401,586.20 for defraying the expenses of the public service during the fiscal year 1942-43, being one-twelfth of the items contained in the main estimates, together with an additional interim of \$550,655.91, being one-twelfth of the amount set forth in the Schedule to the Act.
20 June 12	<i>The Loan Act, 1942</i> authorizes the raising of a loan, by the issue and sale of securities of Canada, of an amount not to exceed \$750,000,000 for redemption of loans or obligations of Canada and for the public service generally.
21 June 12	<i>The War Appropriation Act, No. 2, 1942</i> grants the payment of \$2,000,000,000, out of the Consolidated Revenue Fund, less the amount provided for in c.9, for defraying expenses incurred during the fiscal year 1942-43 in connection with the national defence, security and welfare of Canada. Authority is also given for the raising, by the issue and sale of securities of Canada, of a sum not exceeding \$2,000,000,000, as may be required for the purposes of the Act.
23 Aug. 1	<i>An Act to Amend the Customs Tariff</i> (c. 44 R.S.C. 1927 and amendments) increases the rates of duty on alcoholic beverages and effects certain other changes in Schedule A to the Customs Tariff.
25 Aug. 1	<i>An Act to Amend the Dominion Succession Duty Act</i> (c. 14, 1940-41) makes superannuation and pension benefits provided by the deceased subject to duty and introduces revisions mainly in respect to exemptions and payment of duties and transfer of property. Added to the former list of exemptions is "residential property of foreign officials".
26 Aug. 1	<i>An Act to Amend the Excess Profits Tax Act, 1940</i> (c. 32, and 1940 amendments) revises the rates of taxation on excess profits. The profits of certain base metal and strategic mineral mines coming into operation within three years after Jan. 1, 1943, are exempt from taxation under this Act and provision is made for the refunding of a certain portion of the tax after the cessation of hostilities. Other minor amendments are made.
27 Aug. 1	<i>An Act to Amend the Excise Act</i> (c. 52, 1934 and amendments) increases the duties on spirits, Canadian brandy, beer, malt, malt syrup and Canadian raw leaf tobacco.
28 Aug. 1	<i>An Act to Amend the Income War Tax Act</i> (c. 97, R.S.C. 1927 and amendments). By this Act the rates of tax on individual incomes and gifts are increased and the rules concerning the computation and collection of income tax are completely revised. Provision is made for the deduction of the tax at the source of income and also for the refunding of a certain portion of the tax after the cessation of hostilities. The National Defence Tax is repealed.
32 Aug. 1	<i>An Act to Amend the Special War Revenue Act</i> (c. 179, R.S.C. 1927 and amendments). Excise tax is imposed on telephone despatches, telephone extensions, certain places of entertainment and also a retail purchase tax on goods imported into Canada. Upward revisions are made in the excise taxes paid by insurance companies on net premiums, long-distance telephone calls, transportation tickets, seats, berths, etc., cigarette papers, cigarette paper tubes, cigarettes, tobacco, soft drinks, furs, playing cards and wines.

Legislation of the Third Session of the Nineteenth Parliament, Jan. 22,  
1942 to Jan. 27, 1943—continued

Chapter and Date of Assent	Synopsis
<b>Finance and Taxation—concl.</b>	
36 Aug. 1	<i>The Appropriation Act, No. 5, 1942</i> grants payments of \$153,861,377.80 and \$28,159,700, less the amounts already authorized under cc. 2, 11 and 18, out of the Consolidated Revenue Fund, for public service expenses for the fiscal year 1942-43. Authority is also given for raising, by the issue and sale of securities of Canada, a sum not exceeding \$200,000,000 for public works and general purposes.
<b>Agriculture—</b>	
4 Mar. 27	<i>An Act to Amend the Canadian Wheat Board Act, 1935</i> (c. 53, 1935 and amendments) raises the basic price of No. 1 Manitoba Northern wheat from 70 cents per bushel to 90 cents per bushel and the prices of other grades accordingly.
5 Mar. 27	<i>An Act to Amend the Prairie Farm Assistance Act, 1939</i> (c. 50, 1939 and amendments) provides that any crop year may be declared an emergency year for the purposes of this Act.
10 Mar. 27	<i>The Wheat Acreage Reduction Act, 1942</i> establishes the basic acreages for wheat, summerfallow, coarse grains and grass, together with the payments on acreage reductions.
33 Aug. 1	<i>The Veterans' Land Act, 1942.</i> The purpose of this Act is to assist and encourage suitably qualified veterans to engage in agricultural pursuits after the cessation of hostilities by the provision of financial assistance and training facilities.
<b>Labour—</b>	
34 Aug. 1	<i>The Vocational Training Co-ordination Act, 1942</i> authorizes the Dominion Government to undertake projects for the purpose of training persons for gainful employment either in industry or in the Armed Forces and to provide financial assistance to the Provinces for similar undertakings.
<b>External Affairs—</b>	
24 Aug. 1	<i>An Act to Amend the Department of External Affairs Act</i> (c. 65, R.S.C. 1927) provides that any civil servant appointed as a diplomatic or consular representative after Jan. 1, 1938, may continue to be a contributor to the Civil Service Superannuation Act and to receive the same benefits under the Act.
<b>Insurance—</b>	
35 Aug. 1	<i>The War Risk Insurance Act, 1942</i> makes provision for insurance of property in Canada against damage by enemy action and the payment of compensation for certain war damage.
<b>Justice—</b>	
19 June 12	<i>An Act to Amend the Canada Evidence Act</i> (c. 59, R.S.C. 1927 and amendments). By this Act certain terms are defined and conditions given under which photographs may be used in evidence.
<b>National Defence—</b>	
29 Aug. 1	<i>The National Resources Mobilization Act, Amendment Act, 1942</i> removes from the Act the restrictions on the sending out of the country of persons called for military service.
31 Aug. 1	<i>The Reinstatement in Civil Employment Act, 1942</i> provides for the compulsory reinstatement in their former employment of discharged members of His Majesty's Forces and other designated classes of persons.
<b>Trade and Commerce—</b>	
6 Mar. 27	<i>An Act to Amend the Precious Metals Marking Act</i> (c. 84, R.S.C. 1927 and amendments) allows a 10 p.c. leeway on assay of materials used in gold-filled articles.
16 May 28	<i>An Act to repeal the Petroleum and Naphtha Act</i> (c. 159, R.S.C. 1927 and amendment). By that Act petroleum and naphtha made in Canada or imported into Canada were made subject to inspection before being sold or offered for sale for consumption in Canada.
30 Aug. 1	<i>An Act to Amend the Precious Metals Marking Act</i> (c. 84, R.S.C. 1927 and amendments) refers to the word "gold" in respect of the marking of watch cases manufactured in Canada or imported and offered for sale.

**Legislation of the Third Session of the Nineteenth Parliament, Jan. 22,  
1942 to Jan. 27, 1943—concluded**

Chapter and Date of Assent	Synopsis
<b>Transportation—</b>	
12 May 28	<i>An Act respecting the appointment of Auditors for National Railways</i> provides for the appointment of independent auditors for 1942 to make a continuous audit of the accounts of the National Railways.
17 May 28	<i>The Toronto Harbour Commissioners' Act, 1942</i> grants to the Corporation the power to renew or refund any debentures issued by it and to borrow money and to issue debentures.
22 Aug. 1	<i>The Canadian National Railways Financing and Guarantee Act, 1942</i> authorizes the provision of moneys to meet certain capital expenditures made and capital indebtedness incurred by the Canadian National Railways System during the calendar year 1942; to provide for the refunding of financial obligations, and to authorize the guarantee by His Majesty of certain securities to be issued by the Canadian National Railways Company.
<b>Miscellaneous—</b>	
1 Mar. 5	<i>The Dominion Plebiscite Act, 1942</i> provides for the taking of a plebiscite in every electoral district in Canada and the taking of the votes of the ordinary voters and the Canadian Service voters on the question: "Are you in favour of releasing the Government from any obligation arising out of any past commitments restricting the methods of raising men for military service?"
15 May 28	<i>An Act to authorize an Agreement between His Majesty the King and the Corporation of the City of Ottawa</i> (c. 15, 1920 and amendments) extends for one year from July 1, 1941, the agreement of Mar. 30, 1920, with the City of Ottawa for certain payments in lieu of part of rates and taxes for civic services and water, and in settlement of certain claims.

**Legislation of the Fourth Session of the Nineteenth Parliament, Jan. 27,  
1943 to July 24, 1943**

Chapter and Date of Assent	Synopsis
<b>Finance and Taxation—</b>	
2 Feb. 16	<i>The Supplementary 1942 War Appropriation Act</i> provides for payment, out of the Consolidated Revenue Fund, of \$858,000,000, beyond the ordinary grants of Parliament, for expenses incurred in connection with national defence and security during the fiscal year 1942-43 and authorizes the re-expenditure of moneys received as refunds or repayments under authority of previous War Appropriation Acts.
3 Apr. 5	<i>The Appropriation Act, No. 1, 1943</i> grants an interim payment of \$40,314,665.57 out of the Consolidated Revenue Fund for expenses of the public service for the fiscal year 1943-44, being one-sixth of the amount of the main estimates.
4 Apr. 5	<i>The Appropriation Act, No. 2, 1943</i> grants payment, out of the Consolidated Revenue Fund, of \$2,694,361.76 for public service expenses based on further supplementary estimates for the fiscal year 1942-43.
5 Apr. 5	<i>The War Appropriation Act, No. 1, 1943</i> authorizes the payment, out of the Consolidated Revenue Fund, of a sum not exceeding \$648,333,333.33 for expenses incurred during the fiscal year 1943-44, being one-sixth of the amount of \$3,890,000,000 granted to His Majesty in connection with the security, defence and welfare of Canada.
6 Apr. 21	<i>The Appropriation Act, No. 3, 1943</i> grants payment, out of the Consolidated Revenue Fund, of \$33,333.33 for a certain charge and expense of the public service being five-sixths of item 116 in the main estimates 1943-44.
7 Apr. 21	<i>An Act to Amend the Customs Tariff</i> (c. 44 R.S.C. 1927 and amendments). By this Act certain changes are made in Schedule A to the Customs Tariff including an increase in the duties on certain alcoholic beverages.

Legislation of the Fourth Session of the Nineteenth Parliament, Jan. 27,  
1943 to July 24, 1943—continued

Chapter and Date of Assent	Synopsis
<b>Finance and Taxation—concl.</b>	
9 Apr. 21	<i>An Act to Amend the Excise Act</i> (c. 52, 1934 and amendments). Among the revisions set forth in this Act are those concerning the handling of spirits and manufactured tobacco. The excise duties are raised on spirits and Canadian brandy.
11 Apr. 21	<i>An Act to Amend the Special War Revenue Act</i> (c. 179, R.S.C. 1927 and amendments) increases to two cents the stamp tax on letters and post cards, except on those addressed to members of the Armed Forces overseas, on which the stamp tax is one cent. The excise taxes on cigarette papers and tubes and on places of amusement are increased and those on cigarettes and manufactured tobacco removed. Other amendments mainly in connection with deductions, refunds and drawbacks are made.
13 May 20	<i>An Act to Amend the Excess Profits Tax Act, 1940</i> (c. 32, 1940 and amendments). The Act makes certain revisions re the rate of tax on profits of oil and gas royalty companies, the ascertaining of standard profits of certain controlled companies, the instalment payment of the tax, etc.
14 May 20	<i>An Act to Amend the Income War Tax Act</i> (c. 97 R.S.C. 1927 and amendments). The Act makes numerous amendments in regard to procedure, the most important dealing with service pay and allowances received by members of the Armed Forces on active service; exemption of, or reduction of taxation on moneys expended in the drilling of dry oil wells or in prospecting for certain minerals; and the waiving of half the tax due on 1942 incomes.
15 May 20	<i>The Appropriation Act, No. 4, 1943</i> grants payment, out of the Consolidated Revenue Fund, of \$40,307,998-90 for expenses of the public service for the fiscal year 1943-44, being one-sixth of the amount of the main estimates (less item 116).
16 May 20	<i>The War Appropriation Act, No. 2, 1943</i> authorizes the payment, out of the Consolidated Revenue Fund, of a sum not exceeding \$648,333,333-33 for expenses incurred during the fiscal year 1943, being one-sixth of the amount of \$3,890,000,000 granted to His Majesty in connection with the security, defence and welfare of Canada.
17 May 20	<i>The War Appropriation (United Nations Mutual Aid) Act, 1943</i> authorizes the establishment of a Canadian Mutual Aid Board for the purpose of making war supplies available to the United Nations to be used in the joint and effective prosecution of the War. The sum of \$1,000,000,000 is provided out of Consolidated Fund Account for expenditures incurred under the Act and authority is given for the raising of an additional \$1,000,000,000 for the purposes of the Act.
21 July 24	<i>The Canada-United States of America Tax Convention Act, 1943</i> confirms a Convention and Protocol between the Governments of Canada and the United States regarding the avoidance of double taxation and the prevention of fiscal evasion in the case of income taxes.
24 July 24	<i>An Act to Amend the Department of National Revenue Act</i> (c. 137, R.S.C. 1927 and amendments) authorizes the appointment of a Deputy Minister of National Revenue for Taxation, which position shall carry the duties of the former Commissioner of Income Tax and Commissioner of Succession Duties; also a Deputy Minister of Customs and Excise in place of the Commissioner of Customs and the Commissioner of Excise.
32 July 24	<i>The War Appropriation Act, No. 3, 1943</i> grants payment of \$3,890,000,000, out of the Consolidated Revenue Fund, less the amounts provided for in cc. 5 and 16, towards defraying expenses incurred during the fiscal year 1943-44 in connection with national defence and security. Authority is also given for the raising, by the issue and sale of securities of Canada, of a sum not exceeding \$3,890,000,000, as may be required for the purposes of the Act.
33 July 24	<i>The Appropriation Act, No. 5, 1943</i> grants payment, out of the Consolidated Revenue Fund, of \$161,231,995-62 and \$43,633,933-82 less the amounts already authorized under cc. 3, 6 and 15 for public service expenses for the fiscal year 1943-44. Authority is also given for raising, by the issue and sale of securities of Canada, a sum not exceeding \$200,000,000 for public works and general purposes.
<b>Agriculture—</b>	
12 Apr. 21	<i>An Act to Amend the Wheat Acreage Reduction Act, 1942</i> (c. 10, 1942-43) provides for the computation of basic acreages on lands not operated in 1940 and makes certain revisions regarding payments on acreage reductions.
26 July 24	<i>The Farmers' Creditors Arrangement Act, 1943</i> . The Farmers' Creditors Arrangement Act, 1934 (c. 53) and amendments thereto are repealed and new legislation enacted for the purposes of providing means whereby compromises or rearrangements may be effected between insolvent farmers and their creditors.

**Legislation of the Fourth Session of the Nineteenth Parliament, Jan. 27,  
1943 to July 24, 1943—concluded**

Chapter and Date of Assent	Synopsis
<b>External Trade—</b>	
28 July 24	<i>An Act to repeal the Japanese Treaty Act, 1913</i> (c. 27, 1913) which enacted a certain treaty of commerce and navigation between His Majesty the King and His Majesty the Emperor of Japan.
<b>Justice—</b>	
1 Feb. 5	<i>An Act to Amend an Act respecting the Chief Justice of Canada</i> (c. 14, 1939). The Act extends the term of office of the Chief Justice of Canada from three years to four years.
20 July 24	<i>An Act to Amend the Canada Evidence Act</i> (c. 59, R.S.C. 1927 and amendments) establishes the validity of oaths, affidavits, etc., taken or received by officers of His Majesty's diplomatic or consular services or Canadian Government Trade Commissioners while serving in any foreign country or any Empire country outside of Canada.
23 July 24	<i>An Act to Amend the Criminal Code</i> (c. 36, R.S.C. and amendments). These revisions relate to a number of items under the Act, including offensive weapons, gambling facilities and devices and evidence and trials.
25 July 24	<i>An Act to Amend the Exchequer Court Act</i> (c. 34 R.S.C. 1927 and amendments) defines a member of the naval, military or air forces of His Majesty as a servant of the Crown for the purpose of determining liability in actions by or against His Majesty.
<b>Labour—</b>	
31 July 24	<i>An Act to Amend the Unemployment Insurance Act, 1940</i> (c. 44, 1940) makes numerous administrative revisions to the original legislation.
<b>Transportation—</b>	
18 July 24	<i>An Act respecting the Appointment of Auditors for National Railways</i> provides for the appointment of independent auditors for 1943 to make a continuous audit of the accounts of the National Railways.
22 July 24	<i>The Canadian National Railways Financing and Guarantee Act, 1943</i> , authorizes the payment of a sum not exceeding \$6,046,300, out of the Consolidated Revenue Fund, to meet certain capital expenditures made and capital indebtedness incurred by the Canadian National Railways System during 1943, and also authorizes the guarantee by His Majesty of certain securities to be issued by the Canadian National Railway Company.
<b>Miscellaneous—</b>	
8 Apr. 21	<i>An Act to Amend the Department of Munitions and Supply Act</i> (c. 3, 1939 and amendments). By this Act personnel appointments to the Department of Munitions and Supply and their salaries are validated. Revisions are made in conditions under which contracts may be made and signed and in the powers of control over persons producing munitions under contract.
10 Apr. 21	<i>An Act to authorize an Agreement between His Majesty the King and the Corporation of The City of Ottawa</i> (c. 15, 1920 and amendments) extends for one year from July 1, 1942, the agreement of Mar. 30, 1920, with the City of Ottawa for certain payments in lieu of part of rates and taxes for civic services and water, and in settlement of certain claims.
19 July 24	<i>The British Columbia Indian Reserves Mineral Resources Act</i> confirms an agreement between the Dominion Government and the Provincial Government of British Columbia to the effect that, with certain provisions, the administration, control and disposal of minerals and mineral claims on Indian Reserves in British Columbia shall be subject to the Laws of the Province, and that the revenue therefrom shall be divided equally between the Province and the Dominion.
27 July 24	<i>An Act to Amend the Federal District Commission Act, 1927</i> (c. 55 R.S.C. 1927 and amendments) extends the annual payment of \$200,000 for a period of ten years from Apr. 1, 1943.
29 July 24	<i>The National Physical Fitness Act</i> , establishes a National Council on Physical Fitness, the duty of which shall be the promotion of the physical fitness of the people of Canada by financial assistance to physical education, training of teachers and co-operation with existing organizations and with the provinces.
30 July 24	<i>An Act to Confirm the Transfer of Certain Lands to Ontario and Quebec</i> . This Act provides for the transfer of certain Dominion lands to the two provinces of Ontario and Quebec owing to the necessity of developing additional power on the Ottawa River for the operation of war industries.

## APPENDIX I

### External Trade of Canada, 1940-44

Preliminary figures of the external trade of Canada for the fiscal year ended Mar. 31, 1944, show a grand total trade of \$4,974,743,551 as compared with \$4,068,095,674 for the previous fiscal year and \$3,404,837,311 for 1941-42. The increase was mainly in domestic exports which rose from \$2,421,446,478 in 1942-43 to \$3,173,143,528 in 1943-44. Imports were \$1,762,771,514 in 1943-44 as compared with \$1,625,503,839 in 1942-43. Foreign exports were \$38,828,509 compared with \$21,145,357.

The following tables show: the imports and domestic exports of Canada, classified by industrial groups, by months, April, 1942, to March, 1944; the total trade of Canada, by months, during the war years; and an analysis of domestic exports for the calendar year 1943 by countries to which the goods are exported.

## APPENDIX II

### Survey of Production, 1941-42

The enterprises engaged in the production of commodities were definitely more active in 1942 than in the preceding year. The net value of output by the nine main branches, after elimination of intergroup duplication and cost of materials was \$6,258,465,000 against \$4,720,073,000 in 1941. The gain of 32.4 p.c. was shared by the primary and secondary activities, but the advance registered by elementary operations was more pronounced. Agriculture showed an increase of 77.9 p.c. and manufactures an increase of 27.1 p.c.

<sup>1</sup> See Chapter VII for explanation of gross and net value of production. <sup>2</sup> Gross value comprises industrial mineral production shown in Chapter XII, Table 1, plus the value of ores, etc., of the smelting industry.

<sup>3</sup> The item "Manufactures" includes sawmills, pulp and paper mills, etc., which are also included in other headings above. This duplication, amounting in 1941 to a gross of \$957,448,976 and a net of \$410,298,515, and in 1942 to a gross of \$1,070,508,497 and a net of \$425,472,701, is eliminated from the grand total.

<sup>4</sup> Secondary production includes the above-mentioned duplication. The percentage of net manufactures, less duplication, to the total net production in 1942 was 6.8.

<sup>1</sup> Based on estimates of population given on p. 141.

## APPENDIX III

### Occupations of the Canadian People, Census of 1941\*

**Definition of Gainful Occupation.**—A gainful occupation is defined in the Census as one “by which the person who pursues it earns money or in which he assists in the production of marketable goods”. Persons unemployed at the census date were asked to report the occupation in which last employed. Those who indicated that they had been unemployed for some lengthy period were further asked whether they were still seeking employment, before being considered as gainfully occupied. Persons who reported that they were no longer following their former occupation because of old age or physical disability, and did not expect to return to it, were enumerated as “retired”. As for young persons, only those not attending school and employed regularly in some gainful occupation were included among the gainfully occupied. Children of working age, that is, 14 years of age or over, assisting parents in the work of the farm or in some family business in a “no pay” capacity were reported as having a gainful occupation, but daughters helping in the domestic work of the home without pay were not included.

It should be mentioned that where a person customarily followed more than one occupation the enumerator recorded the occupation at which the person was employed *most of the time* during the year or from which he received the greater part of his annual earnings.

Final figures for Canada, excluding Yukon and the Northwest Territories, show that 3,676,563 males and 833,972 females, 14 years or over, or a total of 4,510,535 persons, including members of the Armed Forces, were gainfully occupied at the time of the 1941 Census. Males represented 81.5 p.c. and females 18.5 p.c. of the total gainfully occupied. The population of the nine provinces consisted of 5,890,683 males and 5,599,030 females or a total of 11,489,713 persons. The total gainfully occupied, therefore, accounted for 39.26 p.c. of the total population, gainfully occupied males representing 62.41 p.c. of the total male population and gainfully occupied females 14.89 p.c. of the total female population. Nearly 84 p.c. of the males and about 20 p.c. of the females, 14 years of age or over, were gainfully occupied at the 1941 Census. Figures quoted in the following tables are exclusive of the Armed Forces, except where specifically mentioned.

**Relative Growth of Males and Females in Gainful Occupations, 1921 to 1941.**—Table 1 shows that the percentage of the male population at working ages, i.e., 14 years or over, in gainful occupations has been declining since the 1921 Census, while for females the percentage has been on the increase. The table also shows that if males on Active Service at the census date are excluded from the total gainfully occupied males the percentage that gainfully occupied males bears to the total male population, 14 years or over, is thus reduced from 83.8 p.c. to 76.7 p.c.

---

\* Prepared under the direction of the Chief, Demography Branch, Dominion Bureau of Statistics, by A. H. LeNeveu, M.A., Officer in Charge of Occupational Statistics.

### 1.—Numbers and Percentages of the Population in Gainful Occupations, Classified According to Sex, Census Years 1921-41

(Exclusive of Yukon and the Northwest Territories)

Census Year	Gainfully Occupied Population			Percentages of Total Population			Percentages of Population 14 Years or Over		
	Total	Male	Female	Total	Male	Female	Total	Male	Female
1921.....	3,164,348	2,675,290	489,058	36.1	59.2	11.5	53.3	86.6	17.2
1931.....	3,921,833	3,256,531	665,302	37.8	60.7	13.3	53.8	85.4	19.1
1941 (incl. Active Service).....	4,510,535	3,676,563	833,972	39.3	62.4	14.9	53.0	83.8	20.2
1941 (not incl. Active Service).....	4,195,951	3,363,111	832,840	36.5	57.1	14.9	49.3	76.7	20.2

As is indicated in Table 2 the decline in the proportion of males at working ages in gainful occupations has been largely due to the raising of the school-leaving age and, at the older ages, to earlier retirement. The table shows that only 16.9 p.c. of the males 14-15 years of age and only 57.3 p.c. of the number 16-19 years of age were gainfully occupied at the 1941 Census, appreciably lower percentages than in 1921 or 1931. The lower percentage of gainfully occupied males in the age group 16-19 years in 1941 than in 1931 is partly due to the exclusion of males in this age group on Active Service at the date of the Census who were gainfully occupied prior to enlistment. A further significant change has been the decline from 55.7 p.c. to 47.2 p.c. in the percentage of males 65 years or over in gainful occupations during the decade 1931 to 1941. It should be mentioned that the lower percentages of males gainfully occupied in the age groups from 20 to 64 years of age in 1941 than in 1931, as shown in Table 2, is due to the exclusion of males on Active Service from this table. It has been found that if the males on Active Service on the census date, June 2, 1941, were added to the gainfully occupied males 18-44 years of age, then the total would constitute 95.7 p.c. of all males in that age group, whereas if they are excluded from the gainfully occupied males between these ages the latter represents only 82.6 p.c. of the total male population, 18-44 years of age.

### 2.—Numbers and Percentages of the Population, 14 Years of Age or Over, in Gainful Occupations, Classified According to Age and Sex, Census Years 1921-41

(Exclusive of Yukon and the Northwest Territories)

<sup>1</sup> Includes a few persons of "not stated" age. In 1921 such persons were included in the age group 35-64 years. In 1941 there was no "not stated" age group since all ages were assigned to specific groups.

In Table 3 the number of females to every 1,000 males in gainful occupations is given by provinces for the census years 1921 to 1941. The table shows that in every province the ratio of females to males in gainful occupations has been increasing since 1921. It is interesting to note that even if all males on Active Service are included in the male population in gainful occupations at the 1941 Census the ratio of females to males gainfully occupied in 1941 is still greater in each province than in 1931 or 1921. In the industrial provinces of Ontario and Quebec the ratio of females to males gainfully occupied is highest. The higher ratios of females to males in gainful occupations in Nova Scotia and New Brunswick than in the West is partly due to the higher proportion of females at working ages in relation to males at these ages in the Maritime Provinces than in the western provinces.

**3.—Number of Females to Every 1,000 Males in Gainful Occupations, by Provinces, Census Years 1921-41**

(Exclusive of Yukon and the Northwest Territories)

Census Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Canada
1921.....	149	183	176	216	211	171	103	108	131	183

1941 (not incl. Active Service)	196	241	230	280	276	231	156	163	213	248

**Occupational Trends, 1901-1941.**—The chief obstacle in the way of a comparison of occupations by census years is the absence of a uniform scheme of classification of occupations at each succeeding census. Even if the scheme of classification itself had not changed, the difficulty of making a comparison of occupations every decade would still exist owing to the revolutionary changes that have taken

place in the nature of the work performed in many occupations with the introduction of machine processes in production. Hence, such a comparison can best be made only for broad occupational groups such as are shown in Table 4. In this table the group totals for years prior to 1931 and for 1941 have been rearranged to place them on a comparable basis with the 1931 classification, the 1911 figures perhaps being less comparable than those for other years. The main change in the 1931 grouping was the addition of the "accountants" class to the clerical group from the professional service group. In the headnote to Table 4, an explanation is given of the nature of the occupational grouping.

The outstanding feature of this table, so far as males are concerned, is the decline shown in the relative importance of agricultural occupations since 1901. In 1901 just over 45 p.c. of all males in gainful occupations were engaged in agricultural occupations as compared with 31.7 p.c. in 1941. There has been some increase in the proportionate importance of other primary occupations since 1921. Manufacturing occupations have also increased in relative importance, especially over the period 1931 to 1941. The table further shows that there has been a steady growth in the numbers of males engaged in the transportation, trade and service occupations. The proportion of males reported as labourers (other than agricultural, fishing, logging or mining labourers) varies considerably from census to census. This may be partly due to differences in the quality of enumeration of occupations at different censuses but is perhaps chiefly due to the tendency for recent immigrants prior to each census, to be more largely reported as labourers than the gainfully occupied generally. At the 1931 Census 24.6 p.c. of the gainfully occupied immigrants who came to Canada between 1926 and 1931 were returned as labourers by enumerators. There was very little immigration over the ten years prior to the 1941 Census.

With reference to the decrease in the relative importance of women in manufacturing occupations in 1941 as compared with census periods prior to 1931, the following statement at p. 133 of the 1937 Canada Year Book may be repeated:—

"A large part of the decline in the relative importance of manufacturing occupations in providing gainful employment for women has been due to the decrease in the number of dress-makers, milliners, and tailoresses since 1911. The combined total of dress-makers, milliners, and tailoresses was 45,287 in 1911 and in 1931 only 14,649. Allowing for changes in the method of classification in the two years, there still remains a substantially larger number in these occupations in 1911 which does not appear to have been fully counter-balanced by the increase between 1911 and 1931 in the number of female operatives in clothing factories."

Since 1921 the proportion of females in commercial occupations and in the professions has declined, while the proportion in clerical occupations has remained about the same. The personal service occupations continue to employ a large proportion of all women in gainful occupations and have shown a tendency to increase in relative importance since 1921. Phenomenal growth in the number of hairdressers and waitresses has contributed to this expansion in the number of women in personal service occupations over the 20-year period since the 1921 Census.

#### 4.—Numbers and Percentages of the Gainfully Occupied Males and Females, 10<sup>1</sup> Years of Age or Over, by Occupation Groups, Census Years, 1901-41

(Exclusive of Yukon and the Northwest Territories)

NOTE.—The occupation group totals in this table account for every person following any one of the type<sup>8</sup> of occupation coming under the specified groups listed here, irrespective of the industry in which the person might be employed. For example, all persons directly engaged in the making or repairing of commodities, e.g., bakers, tailors, machinists, printers, etc., are classified under "Manufacturing" in this table whether employed in the manufacturing industry or not. Similarly, all persons following such a transport occupation as truck driver are listed under "Transportation", whether employed by a trucking concern or factory store, etc. Clerical workers constitute a separate group as do labourers in all but the primary industries. The labourer on a farm is usually a farm labourer and in a mine, a mine-working labourer, but the labourer in a steel mill is not necessarily a metal worker or engaged in some "process" occupation, nor is the labourer on a steam railway always a transport worker.

Occupations for 1891 to 1921, inclusive, and 1941 were rearranged on the basis of the 1931 classification, though some adjustment of the 1931 grouping was necessary.

<sup>1</sup> 14 years or over in 1941.

<sup>2</sup> Does not include Indians.

<sup>3</sup> Includes pulp-mill employees.

<sup>4</sup> Does not include Indians living on reserves.

<sup>5</sup> Includes almost all mine and smelter employees, except clerical workers.

<sup>6</sup> Less than 0.05 p.c.

<sup>7</sup> Includes proof readers, shippers, weighmen, and postmen, classified elsewhere in other years. The addition of these persons to the 1931 figure would have added 18.0 p.c. to the number of males in this occupation group.

<sup>8</sup> This class does not include agricultural, fishing, logging or mining labourers.

<sup>9</sup> Includes persons in "not stated" occupations though these are not shown separately in the table.

**Occupations by Provinces in 1941.**—In Table 5 the numbers and percentages of the total gainfully occupied in Canada are shown by occupation groups for 1941. In addition, the gainfully occupied in each province at the 1941 Census is distributed by occupation groups in Table 6, while in Table 7 the percentage of the total in each occupation group is shown for provinces. It will be seen that substantial proportions of the males in Canada and every province, particularly in Prince Edward Island and the Prairie Provinces, were engaged in agricultural occupations in 1941. Fishing and logging occupations were relatively more important in Nova Scotia, New Brunswick and British Columbia than in other provinces, while mining occupations accounted for about 10 p.c. of the gainfully occupied males in Nova Scotia. Manufacturing occupations gave employment to considerable proportions of both males and females in the provinces of Quebec and Ontario. In British Columbia more males were employed in manufacturing occupations in 1941 than in any other group of occupations. Although females were employed in appreciable numbers in trade and clerical occupations in every province, by far the largest numbers in Canada and the provinces were found in the service occupations, considerable proportions being employed in such professional occupations as teachers and nurses, and in such personal service occupations as domestic servants, housekeepers and waitresses.

**5.—Numbers and Percentages of the Gainfully Occupied Males and Females, 14 Years of Age or Over, by Occupation Groups, 1941**

**Selected Occupations by Sex in 1941.**—The principal occupations reported by males and females at the 1941 Census are shown in Table 8. The table lists, in order of numerical importance, all occupations having 20,000 or more males and all occupations with 10,000 or more females at the latest census. These occupations accounted for 71.8 p.c. of all males and 81.3 p.c. of all females in gainful occupations at the 1941 Census. There has not been much change in the order of the principal

occupations since 1931, although it may be mentioned that truck drivers, lumbermen and mechanics have shown substantial increases over the past decade, while the number of waitresses has increased notably since the 1931 Census.

<sup>2</sup> Not in factory.

**Occupations by Age in 1941.**—Table 9 classifies the gainfully occupied population at the 1941 Census by occupation groups to show the number and percentage in each occupation group by age. The table shows that in agricultural, fishing and logging occupations, in clerical occupations, and in the labourers group, higher proportions of males under 25 years of age were employed than in other occupation groups. It is worth noting, on the other hand, that 47.6 p.c. of the males in construction occupations were 45 years or over, while about 50 p.c. of those in personal service occupations were over that age. The table also indicates that in each occupation group the average age of females was considerably lower than for males.

<sup>1</sup> This group does not include agricultural, fishing, logging or mining labourers.  
<sup>2</sup> Totals include small numbers of persons in "not stated" occupations, not shown separately in this table.

**Occupations of Females by Conjugal Condition in 1941.**—According to Table 10, about 80 p.c. of all females in gainful occupations at the 1941 Census were single. In professional and clerical occupations the percentages were even higher, at 92.3 p.c. and 89.7 p.c., respectively. Married women showed a somewhat larger representation in manufacturing and personal service occupations than in most other occupations. A considerable proportion of women in agriculture were widowed farm operators. Widowed women were largely found in personal service occupations, accounting for approximately 10 p.c. of all females in these occupations, as compared with 6.8 p.c. in all occupations.

**10.—Numbers and Percentages of Gainfully Occupied Females, 14 Years of Age or Over, Classified According to Occupation Groups, by Conjugal Condition, 1941.**

(Exclusive of Yukon and Northwest Territories)

<sup>1</sup> Includes divorced, permanently separated, and a few with conjugal condition "not stated". <sup>2</sup> This group does not include agricultural, fishing, logging or mining labourers. <sup>3</sup> Totals include small numbers of persons in "not stated" occupations, not shown separately in this table.

**Occupations by Status in 1941.**—Table 11 classifies the gainfully occupied males and females by occupation group to show the number and percentage in each occupation group by status as of June 2, 1941, for Canada. The table shows that about two-thirds of all males and over four-fifths of all females in gainful occupations at the 1941 Census were wage-earners. Since only 16.8 p.c. of the 1,064,847 males engaged in agricultural occupations in 1941 were wage-earners, the proportionate importance of wage-earners in the total gainfully occupied males is, as stated above, considerably less than in the total of gainfully occupied females. In non-agricultural occupations as a whole 84.3 p.c. of the males at the latest census were wage-earners. In mining, manufacturing, transportation, and clerical occupations, and in the labourers group, over 90 p.c. of all males were wage-earners. In the group, fishing, trapping, logging, most of the fishermen and trappers were reported as on own account at the census date, while most lumbermen were employed as wage-earners. About 20 p.c. of the males in construction occupations were working on own account on June 2, 1941. Almost 100,000 males in trade were reported as employers or own accounts. Most of these were retail merchants and dealers, as is shown by Table 8. In the services the substantial total of physicians, lawyers and dentists in private practice tended to lower the percentage importance of salaried workers in professional occupations while the appreciable numbers of hotel and restaurant owners

and barbers on own account had the effect of reducing the percentage of wage-earners in the personal service occupations. With respect to males in no-pay occupations it will be noted that the large majority were found in agricultural occupations.

About 84 p.c. of all females in gainful occupations in 1941 were wage-earners. In agriculture 14,000 were reported as operating farms on own account. Almost all the 30,000 females on own account in the personal service occupations were lodging-house keepers. Most of the females shown in Table 11 as no-pay workers in professional service occupations were nurses-in-training or nuns engaged in religious work, nursing and teaching, while the majority of the no-pay workers shown in personal service occupations were domestic servants and housekeepers.

**11.—Numbers and Percentages of the Gainfully Occupied, 14 Years of Age or Over, Classified According to Occupation Groups, by Industrial Status and Sex, 1941**
